AIM HIGHER

OVER ALL PROGRESS REPORT OF SUSTAINABLE DEVELOPMENT GOALS

City College of Cagayan de Oro
2025-2026

Overall Report on SDG 1 to 17 2025 to 2026

City College of Cagayan de Oro | 2025 accomplishments and proposed 2026 follow-through

City College of Cagayan de Oro presents this overall progress report as an integrated account of its contributions to the seventeen Sustainable Development Goals. The 2025–2026 reporting cycle is grounded in documented accomplishments from January to December 2025. Earlier records provide context where they establish continuity; proposed follow-through for 2026 is identified separately and is not counted as completed delivery.

The central finding is that the College's contribution operates through education, research, public engagement and partnership. Inclusive learning and technical-vocational preparation connect with poverty and employment; health and rights activities support participation and dignity; climate and environmental learning connect academic expertise with community action. Partnerships provide expertise, access, resources and organized opportunities for delivery across these themes.

The report retains the benchmark's institutional format: an introductory account of direction, a goal-by-goal narrative with accomplishment tables, and an integrated assessment. It expands the evidence through research discussions, photographs and publication graphics, quantitative charts where a defensible counting basis exists, and a source register. Shared initiatives are interpreted under relevant goals without turning their repeated appearance into additional institutional projects.

The 2025 record demonstrates both achievements and unfinished work. It contains completed training and engagement, identifiable research publications, resource provision and partnership milestones. It also contains proposals, advertised opportunities and support announcements whose subsequent results are not established. Transparent reporting of these stages makes the account more useful for institutional review and future planning.

Executive Assessment

The most concrete training-output series consists of two TSTI graduation ceremonies: 384 reported graduates in June and 381 in December, for a combined calendar-year count of 765. The matched 2024 series totals 855. The decrease of 90, or 10.53%, is reported alongside continued delivery across seven qualification categories. The count is a ceremony-based training output, not a verified total of unique low-income learners, national assessment passers or employed graduates.

Access support remained visible through SKIL cooperation with Pilipinas Shell Foundation, PESO coordination, community information services, the Night Caravan and ALS work. The source describes 38 youth supported since the July 2024 SKIL agreement, while a later account recognizes 24 EIM scholars. These figures concern different stages and potentially overlapping groups. They remain separate from graduation and outreach totals.

Health, gender and rights contributions include around 27 bags of blood collected at Dugong Bayani; a two-day human-rights workshop for 30 personnel; a four-hour electrical-skills activity for over 70 solo parents and KALIPI members; mental-health learning for student leaders; and the Take Pride initiative and its public recognition. The outputs demonstrate organized work with defined audiences. The record does not provide a common annual health, equality or rights-compliance measure.

Environmental outputs are clearest in the February Baybayani account reporting 30 sacks of waste across three coastal areas and the March mangrove account reporting 300 seedlings with 60 joint volunteers. A solar-powered study shed adds a tangible clean-energy facility. GREEN facilitation with WWF-Philippines extends environmental learning to several locations. The outputs are retained in their original units without conversion into unmeasured carbon, biodiversity or waste-reduction outcomes.

The ATECCE sequence is the strongest climate-education continuity account: earlier engagement is followed by a September 2025 workshop and MOU, courseware demonstration, research presentations and selection of two projects for support. RITE 2 similarly moves from approval to tool development for a named mentorship study with Xavier University. These are meaningful development stages; approved funding and support selection remain distinct from receipt, expenditure and completed evaluation.

The research portfolio includes journal publications, a Springer chapter with a 2025 online-release record, conference studies and one College-published Higalaay abstract volume. The volume disseminates work from multiple institutions. Its inclusion strengthens the publication-platform account while preserving external authorship. An abstract, presentation, award and journal article are not automatically four independent studies.

The principal institutional challenge is to connect these activities with consistent follow-up measures. The current evidence is stronger on delivery, public documentation and collaboration than on sustained learner, livelihood, ecological or governance outcomes. The 2026 direction proposed in this report addresses that gap through cohort tracking, project identifiers, site monitoring and clearer links between agreements, resources and implementation.

Reporting Scope and Interpretation

The report label 2025–2026 identifies the reporting cycle requested for this consolidated account. The accomplishment base is calendar year 2025. A 2026 date appearing in a planned pilot, a later monitoring sheet or a review date does not convert a 2025 event into a completed 2026 activity. Where no 2026 delivery record is supplied, the corresponding discussion is a proposed direction rather than an accomplishment.

The seventeen supplied goal reports are the immediate evidence base. Their dated institutional articles, publisher records, identifiers and embedded documentation provide the source trail. The prior overall report is used as the visual and organizational benchmark, not as authority for relabeling old quantities. Conflicting or superseded figures are reconciled explicitly. The appendices identify material differences that affect interpretation.

Activity date, website publication date, journal date, research observation period and funding stage are separate fields. A publication released in 2025 may analyze earlier data. An event article may be posted later than the event or may contain a conflicting header. The report preserves those distinctions instead of treating every date as interchangeable.

Quantities retain their units and scope. People, scholars, ceremony completions, research respondents, represented regions, seedlings, sacks, agreements and published outputs are not combined into a single impact total. Event participation is not a deduplicated annual beneficiary count. Approximate statements such as over 70 or around 27 remain approximate.

Cross-goal relevance is explained through the contribution involved. Baybayani can concern coastal litter, water-related ecosystems, land stewardship and partnership; these are different interpretations of the same activity. The same workshop or output is not multiplied into new projects because it appears under several goals. Documentation profiles are labeled as selected records rather than institutional performance scores.

Progress includes continued provision, movement from planning to delivery, clearer partnership roles, a new research output or a better documented service. It need not mean every numerical indicator increased. Where a matched outcome series is missing, the report assesses stage and continuity qualitatively rather than assigning an unsupported percentage improvement.

Institutional Direction and SDG Integration

The College's sustainability direction links its educational purpose with the needs of Cagayan de Oro and surrounding communities. In the 2025 evidence, this is visible through second-chance learning, technical qualifications, teacher development, community-oriented research, health and rights education, local cultural work and environmental engagement. These areas connect the academic mission with the conditions that influence participation and well-being outside the classroom.

The operational account involves several offices and units whose names are retained as identified in the relevant records. TSTI supports technical-vocational learning; the Center for ALS connects with alternative-education practitioners and partners; EOO and CIVIC coordinate volunteer and community activity; TIDMAC contributes learning technology and digital support; library services support access to knowledge; student-welfare and health offices support participation and care; and CHRE provides a rights-education mechanism. Research and partnership functions connect these units with external expertise.

Whole-of-institution commitment should be distinguished from universal participation. A College-led initiative demonstrates institutional action, but an event attended by one cohort or department does not prove that every student received the same learning. The overall account therefore shows how different units contribute while leaving coverage questions to curriculum maps, policy documents and administrative records with suitable denominators.

The strongest integration occurs where roles can be connected through a documented sequence. The RITE mentorship project has a named partner and later instrument workshop. CHR cooperation has a partnership foundation and a delivered personnel workshop. ATECCE has a continuing network, a workshop arrangement and technical exchange. These sequences are more analytically informative than a list of offices or logos because they identify how collaboration was expressed in work.

The RISE language and institutional sustainability orientation of the benchmark remain useful framing. Their practical meaning in this report comes from traceable activities and outputs rather than broad claims of excellence. Accountability requires the College to make both delivery and limitations visible, especially where a project remains in development or where participant and outcome data are unavailable.

Research strengthens integration when its role remains clear. Publications on ALS access and learning conditions provide evidence and questions relevant to inclusion. COLEGA research informs the rights-education field. AI and workplace studies contribute to educational and organizational discussion. A shared theme does not establish that a particular paper directly caused a policy or program; adoption requires its own record.

Consolidated Quantitative Profile

The quantitative profile below uses a limited set of units that can be interpreted without inventing a common impact denominator. The ceremony chart permits a matched comparison across two years, while the qualification pie chart describes the composition of one 2025 output series. Additional graphs describe the selected health and partnership evidence sets and the two conference participation categories. They do not measure shares of institutional benefit or expenditure.

The principal annual series is 419 plus 436 equals 855 in 2024, and 384 plus 381 equals 765 in 2025. The June difference is minus 35 and the December difference is minus 55. Both years contain two reported ceremonies. This prevents a partial-year comparison from being mistaken for an annual trend.

The qualification distribution is largest in Electrical Installation and Maintenance NC II, followed by Housekeeping NC II. Together they account for 447 of the 765 reported completions, or 58.43%. The two SMAW levels account for 177, or 23.14%; Barangay Health Services contributes 90, or 11.76%; Plumbing contributes 40, or 5.23%; and Carpentry contributes 11, or 1.44%. These calculated shares describe the reported program mix, not labor-market demand or program quality.

Other figures are intentionally not added. The 60 joint mangrove volunteers are not College-only attendees. The 30 workshop personnel and over 70 practical-skills participants concern different events. The 96 presenters and 33 walk-ins are the conference's reported categories

Ceremony series	2024	2025	Calculated change
June	419	384	−35 (−8.35%)
December	436	381	−55 (−12.61%)
Annual sum	855	765	−90 (−10.53%)

Sources College article 879 | College article 819 | College article 1054 | College article 1305

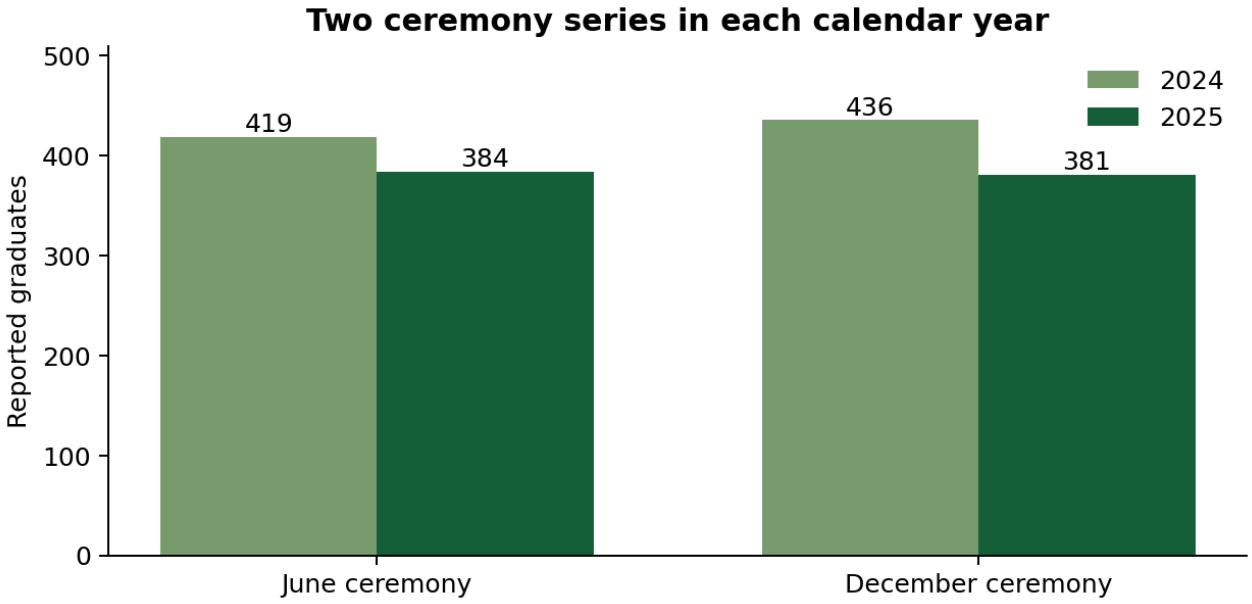

Figure 1. Matched June and December ceremony reports. Both years contain two ceremonies. Sources: College articles 879, 819, 1054 and 1305.

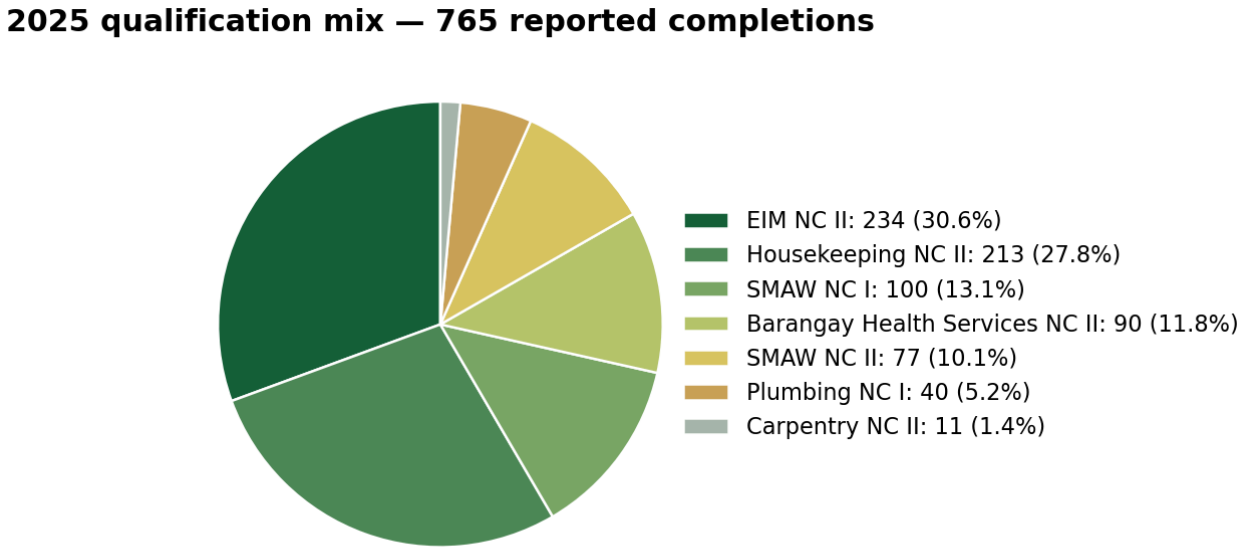

Figure 2. Calculated shares of the 765 reported 2025 completions. These are qualification-output shares, not completion rates or unique beneficiary shares.

Qualification	June	December	Combined
EIM NC II	123	111	234
Housekeeping NC II	108	105	213
SMAW NC I	52	48	100
Barangay Health Services NC II	39	51	90
SMAW NC II	48	29	77
Plumbing NC I	14	26	40
Carpentry NC II	0	11	11
Total	384	381	765

Carpentry is not listed in the June source. The combined value uses the reported December count of 11; the zero used for addition is not a claim that no Carpentry training occurred in June.

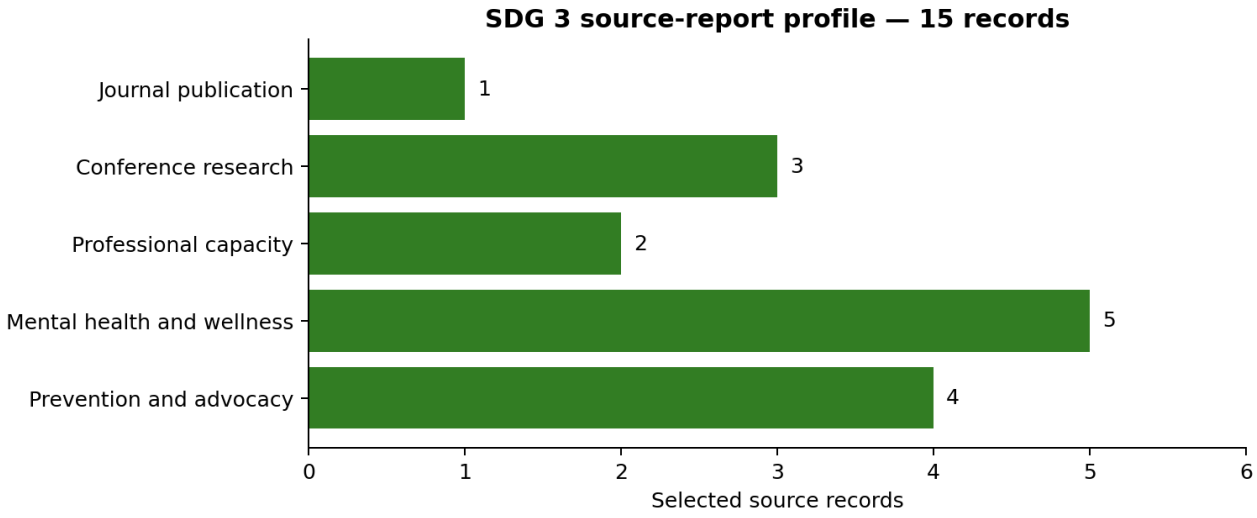

Figure 3. Documentation profile reproduced in count form from the SDG 3 source report. Each selected record is assigned one primary function; the bars do not measure health impact.

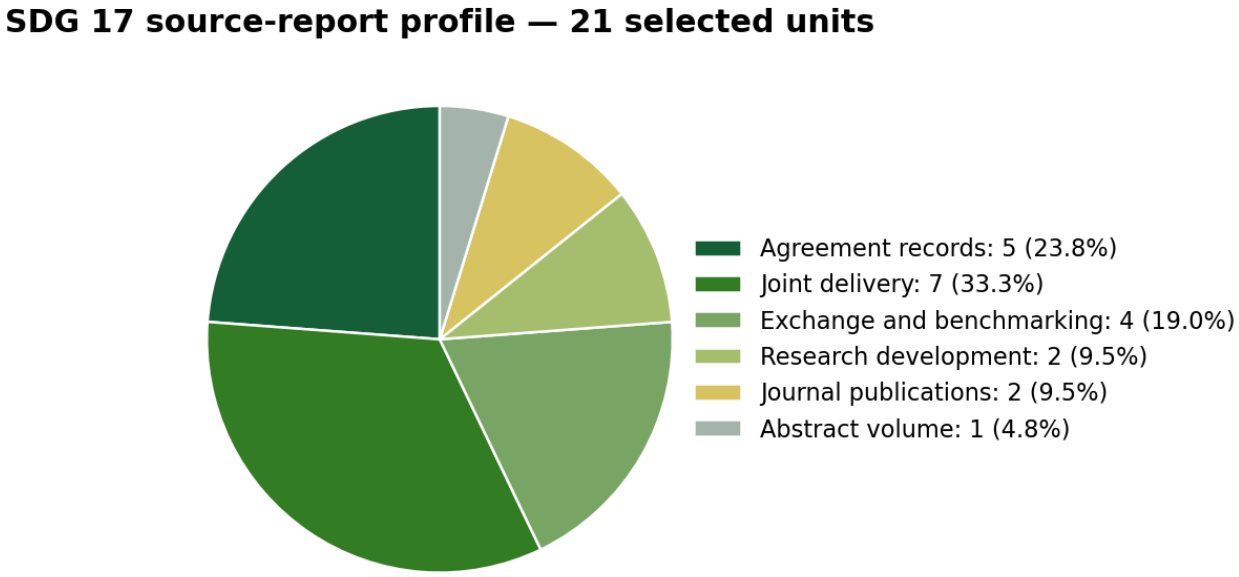

Figure 4. Documentation composition from the SDG 17 source report. Related records may belong to the same collaboration; the 21 units are not an annual partnership census.

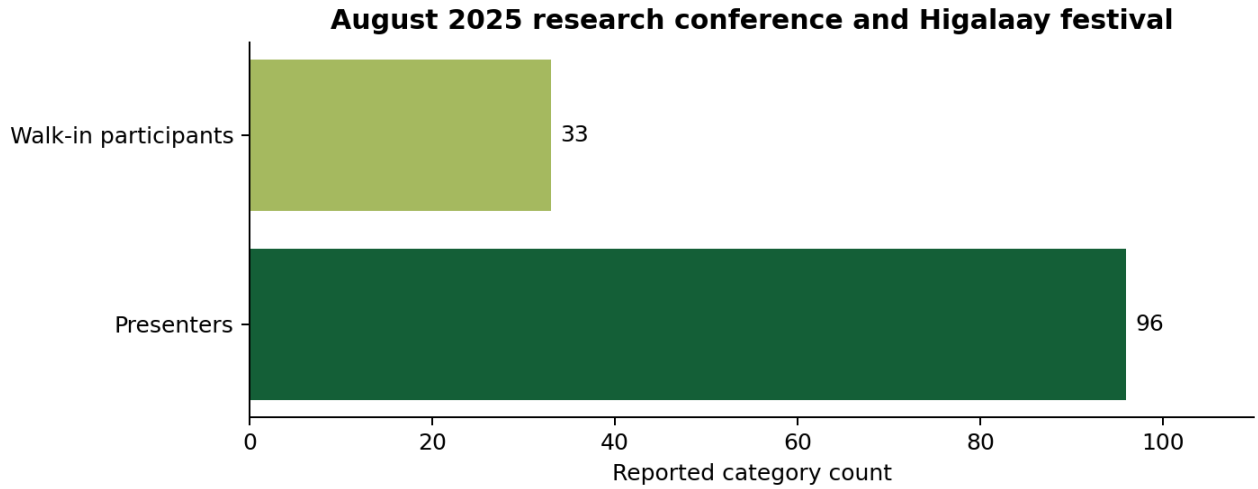

Figure 5. Two categories reported for the August 15, 2025 event. Their sum is not presented as a complete attendance or publication total. Source: College article 1117.

Major Accomplishments Across the 17 SDGs

The following chapters bring the goal reports into one institutional account. Each chapter identifies the contribution, its delivery or development stage, the research or knowledge strand, and the meaning of the evidence. Selected visual documentation is retained from the supplied reports with its source trail. Proposed 2026 priorities follow the accomplishment assessment and are not current-year results.

SDG 1 No Poverty

CCCDO's 2025 contribution to No Poverty is most clearly documented through access to learning, assistance with vocational-training costs, community information services, and the completion of technical qualifications. These activities address practical barriers that can prevent low-income learners from entering or sustaining education. The record also contains research on transportation, geography, persistence, and community-responsive higher education, providing an intellectual basis for examining exclusion.

The institutional pathway connects several functions: research identifies barriers, outreach explains available opportunities, partners help meet training and assessment expenses, and TSTI reports completed programs. These functions are complementary, but they do not describe the same population. An outreach contact, a scholar, a research respondent, and a graduate are different reporting units. Their relationship supports a coherent access-and-livelihood narrative without creating an unsupported total of people lifted out of poverty.

Table 1 Documented 2025 Accomplishments

Initiative or record	2025 date or account	Partner or unit	Documented output or stage	Source article
TSTI graduation ceremonies	23 June; 15 December	TSTI and training partners	384 and 381 reported graduates; 765 combined completions	1054, 1305
SKIL learner support	19 February review; December update	PSFI; CCCDO; PESO	38 youth supported since the 2024 partnership; later recognition of 24 EIM scholars	1013, 1301
Community access outreach	February and August publications	TSTI and barangay partners	Information, enrollment assistance, evening demonstrations; approximate KSB reach of 291 retained as approximate	774, 1134
ALS implementation orientation	25 April	Center for ALS; DepEd specialists	Completed online dialogue on inclusive second-chance learning	1034
Mission 626 research	6–8 November	College researchers; NMSCST congress	Conference dissemination explicitly linked to SDG 1; first-place Best Paper and third Best Presenter recognition	1260

Initiative or record	2025 date or account	Partner or unit	Documented output or stage	Source article
Vendor-focused research planning	12 February	UNLIRICE; CEEBDA; DOST 10; local colleges	Priorities on financial literacy, market systems, and small-vendor support	1007

Sources College article 1054 | College article 1305 | College article 1013 | College article 1301 | College article 774 | College article 1134 | College article 1034 | College article 1260 | College article 1007

Continuity and Development

The clearest cross-year continuity is the SKIL partnership: the July 2024 agreement is explicitly identified in the February 2025 review. This supports reporting of sustained assistance rather than a second, unrelated group of 38 new beneficiaries. The later recognition of 24 EIM scholars adds evidence of a qualification cohort within the partnership; overlap with other reported groups is not resolved. The 2024 TWSP grant amount is not carried forward as a 2025 expenditure.

Detailed Evidence and Knowledge Contribution

Research on geographic and transportation barriers

Overcoming Geographic and Transportation Barriers for Access and Equity in Alternative Learning System

Authors: Ray Butch D. Mahinay and Rolly S. Ortiz Jr. Journal identified by the college: Mindanao Journal of Alternative Education Studies, Volume 2, Number 1, 2025. College alert dated February 3, 2025.

The college announcement describes a qualitative investigation of geographic isolation and transportation challenges affecting ALS learners in five rural Bukidnon municipalities. It identifies transportation costs as a constraint on learning and highlights financial assistance, infrastructure improvements, community engagement, and stakeholder involvement as responses.

Research or activity source

Published study on ALS implementation

Qualitative Insights on the Implementation of the Alternative Learning System in the Philippines

Authors: Ray Butch Daclan Mahinay and Edralin Cañedo Manla. European Journal of Education and Pedagogy, 6(1), 72–76. The publisher records February 13, 2025 as the publication date; the college announcement is dated March 11, 2025.

The study examines ALS implementation through doctoral students' reflections and thematic analysis. Its scope includes andragogy, policy, curriculum, learning modalities, Community Learning Centers,

assessment, and post-program pathways. The account recognizes flexibility and inclusion while identifying challenges in resources, policy implementation, and technology access.

Research or activity source 1 | Research or activity source 2 | Research or activity source 3

Research on community-based higher education

Community-Based Higher Education Initiatives and SDG 4: Meta-Analysis and Lessons for a Local City College

Authors: Ray Butch Mahinay, Pedro Gamba, Candice May Gamayon, and Psyche Cambo. International Journal for Multidisciplinary Research, Volume 7, Issue 1, January–February 2025. Publisher date: January 16, 2025. Live college alert date: January 17, 2025.

The article synthesizes 35 studies published between 2000 and 2024. Its focus is community-based higher education and SDG 4, particularly inclusive access, participatory governance, partnerships, service-learning, and community-responsive extension. The publisher explicitly connects the lessons to the College's Extension and Social Development Services.

Research or activity source 1 | Research or activity source 2 | Research or activity source 3

Interpretation of Results

The consolidated graduation series uses 384 plus 381, or 765, consistent with the detailed qualification counts in the SDG 4 and SDG 8 reports and the updated opening section of the SDG 1 report. The supplied SDG 1 file also retains an older 811-count version. That inconsistency is recorded in the reconciliation appendix, rather than averaged or silently combined. Against the comparable 2024 ceremony sum of 855, the selected 2025 series is lower by 90, or 10.53%. This describes graduate volume, not a poverty rate or employment outcome.

For the 2025–2026 follow-through, the most useful measures are training-cost support by cohort, learner completion, national assessment outcomes, and graduate employment or enterprise status after a defined interval. Recording an appropriate socioeconomic eligibility basis would allow future reporting to distinguish general training provision from assistance specifically reaching low-income learners. Income change should be assessed through follow-up, rather than inferred from the awarding of a qualification.

Documentation source

SDG 2 Zero Hunger

The 2025 Zero Hunger record combines engagement with food-system science, public communication of food sharing, research dissemination, and work around the services and institutions that shape nutrition. Its strongest direct records are the July PhilAAST food-security forum, the Mission 626 research presentation, and the December Community Feast invitation. These contribute different forms of evidence and should not be treated as equivalent feeding interventions.

Food security concerns both immediate access to food and the systems that make access sustainable. CCCDO's documented role is principally educational and collaborative: participation in scientific dialogue, identification of market-related research priorities, contribution to child-service validation, and engagement in extension networks. The Community Feast publication adds a campus food-sharing mechanism, but it remains an invitation in the available account.

Table 2 2025 Accomplishments

Initiative or record	2025 date or account	Partner or unit	Documented output or stage	Source article
PhilAAST food-security forum	16 July	PhilAAST and participating institutions	Completed participation in food security, nutrition, blue-economy and industry dialogue	1104
Community Feast	9 December publication	College students and block communities	Potluck lunch invitation; no verified number of meals served	1294
Mission 626 research	6–8 November	College research team; NMSCST	Conference study explicitly connected to food security and poverty alleviation	1260
Food-innovation learning visit	14–15 April	Caraga State University	Exposure to the Food Technology Center and black soldier fly facilities	899
Child-friendly barangay validation	3–7 February	CHRE; city and partner agencies	Nutrition considered within children's essential services	1011
Research colloquium and ACES	12 February; 29 November	UNLIRICE; CEEBDA; extension partners	Market and bio-waste priorities; summit with 40 entries, 68 institutions and over 250 participants event-wide	1007, 1296

Sources College article 1104 | College article 1294 | College article 1260 | College article 899 | College article 1011 | College article 1007 | College article 1296

Continuity and Development

The earlier overall report foregrounded a regional scientific meeting and Gasa ng Pag-asa. The current evidence continues the scientific strand through the PhilAAST forum and adds a named

extension-research model explicitly associated with food security. The comparison is an expansion of the documented forms of engagement, not a count of more meals or a demonstrated decrease in hunger. The prior food-pack claim is not transferred to the 2025 Community Feast.

Detailed Evidence and Knowledge Contribution

Regional dialogue on food security and nutrition

On July 16, 2025, CCCDO joined the 74th PhilAAST Annual Anniversary and National Convention at N Hotel in Cagayan de Oro, with simultaneous online participation. The program included the Mindanao Forum on Blue Economy and Food Security, Nutrition, and Industry Outlook under the Pagtanaw 2050 framework. The college report is dated July 18.

The named delegation comprised Joel D. Potane, Jonathan A. Madronero, Jason Herrera, Mary Vil Acenas, and Erlouise Vargas. Public photographs document the delegation and convention setting. The article reports discussion of sustainable food systems, nutrition, science, technology, and Mindanao's development outlook; it also records the induction of new PhilAAST members, including college representatives.

This directly shows engagement with the knowledge and partnership dimensions of SDG 2. Its value is participation in food-system and nutrition dialogue.

Research or activity source

Research connecting poverty and food security

Mission 626 as a Community Extension-Based Model for Youth Leadership and Sustainable Development

The college reported this study at the 6th NMSCST Research Congress, November 6–8, 2025. Its authors are Ray Butch D. Mahinay, Herna Francis Mae B. Tano, Joel M. Nob, Jason Basiculan, and Gemma E. Gonzales. The November 8 article explicitly links the model to poverty alleviation and food security, as well as health and clean water.

The report records a first-place Best Paper award in Social Sustainability and Community Well-being and a third Best Presenter award for Tano.

Research or activity source

Public markets and food system research planning

On February 12, 2025, UNLIRICE hosted the first Research Colloquium on Potential Collaboration through Zoom. The February 14 report identifies participation by local government offices, DOST 10, and community colleges, including stakeholders concerned with economic enterprises and agricultural productivity.

Documented breakout priorities included black soldier fly research for waste conversion, bio-waste handling involving public markets and slaughterhouses, night-market facilities and operations, and

financial-literacy and business-scaling support for small vendors. Learning hubs in public markets were also proposed.

These topics relate to food-system support through market operations, resource use, and vendor capability. Their inclusion in the SDG 2 account is an analytical connection to the systems surrounding food access and livelihoods. The source establishes a planning and collaboration forum.

Research or activity source

The strongest institutional interpretation is that Zero Hunger entered several domains of College work: knowledge exchange, public engagement, community assessment, and research planning. The nutrition component of barangay validation should remain a specific contribution within a broader child-rights process. Likewise, visiting another institution's food facility establishes learning and potential cooperation, not a CCCDO food-production installation. The ACES attendance and partner totals describe the whole summit, not the reach of SDG 2 services.

A stronger 2025–2026 food-security account would link each completed initiative to its intended audience and delivery record. Meal-sharing activities can report verified meals, contributors and recipients without assuming food insecurity. Nutrition-oriented work needs an appropriate baseline and follow-up measure. Food-system research should record whether a proposed intervention advanced to a tested method, partner-adopted practice, or sustained service.

Selected Activity and Research Documentation

Figure 8. Official photograph of CCCDO representatives at the 2025 PhilAAST convention and food security forum.

Documentation source

Figure 9. Official fellowship-lunch invitation asking blocks to contribute a dish for sharing.

Documentation source

SDG 3 Good Health and Well Being

CCCDO documented health-related work throughout 2025 through employee wellness, mental health education, student-leader preparation, first aid, HIV awareness, reproductive-health advocacy, blood donation, and research communication. The activities address physical health, psychological well-being, prevention, and the institutional conditions that support learners. The breadth of this record is more informative than a single undifferentiated attendance total.

Three complementary roles emerge. The College organizes opportunities for its own personnel and learners; its specialists share expertise with other institutions; and its researchers communicate work on well-being and learning environments. The May blood-donation activity adds a tangible health-resource output to the educational portfolio. Each role has its own evidence and appropriate measure: participation, learning, referral capability, collection output, or scholarly dissemination.

Table 3 Documented 2025 Accomplishments

Initiative or record	2025 date or account	Partner or unit	Documented output or stage	Source article
Dugong Bayani	9 May	EOO; NMMC; DOH; COCPO	Around 27 bags collected; approximate source wording retained	890, 1038
Lead with Mind and Heart	17 October	SWSO and mental-health facilitators	More than 40 student leaders; peer listening, role play and referral learning	1243
Employee wellness	30 May; 11 November	College offices and service partners	Movement, group support and non-teaching personnel self-care sessions	1047, 1269
External mental-health education	19 September; 8 and 10 October	Initao College; PHINMA–COC	Over 50 leaders in September; nearly 300 students in the later Initao engagement	942, 1195
First aid and HIV awareness	14, 15, 28 February; 7 November	NSTP; Health Services; City Health Office	One reported first-aid series and one HIV awareness campaign	882, 1264
Well-being scholarship	September–November	College research teams; conference and journal venues	ALS learning-space article; NOTED, ICMR and Mission 626 dissemination	1438, 1079, 1258, 1260

Sources College article 890 | College article 1038 | College article 1243 | College article 1047 | College article 1269 | College article 942 | College article 1195 | College article 882 | College article 1264 | College article 1438 | College article 1079 | College article 1258 | College article 1260

Continuity and Development

The prior-year research on fitness, teacher stress and mindfulness supplies a thematic foundation. The 2025 account makes practical engagement more visible through employee sessions, peer-support preparation and public-health activities. The NOTED acceptance letter, program and certificate corroborate one conference contribution at successive stages; The blood-donation articles likewise corroborate one May 9 event.

Detailed Evidence and Knowledge Contribution

Research publication with health and well-being relevance

Child-Friendly Learning Spaces in the Alternative Learning System ALS Focus on Northern Mindanao, Philippines

Ray Butch D. Mahinay, Edralin C. Manla, Nancy S. Ramores, and Amparo V. Dinagsao. Southeastern Philippines Journal of Research and Development, 30(2), 47–62. Publisher date: September 30, 2025; college alert: October 13, 2025. DOI: 10.53899/spjrd.v30i2.1179.

The mixed-methods study surveyed 342 ALS implementers across 14 Northern Mindanao Schools Division Offices and used focus groups. Health and well-being and learner safety are among its seven dimensions. The publisher identifies gaps in health services and infrastructure alongside strengths in participation, academic achievement, and teacher motivation.

Research or activity source 1 | Research or activity source 2 | Research or activity source 3

Academic resources and student well-being research

The June 30, 2025 acceptance letter names Joel D. Potane, Faith Q. Colarte, Melody R. Agcito, and Valcyrus Madarieta and confirms acceptance of their academic-resources and well-being paper for oral presentation. It schedules the convention for September 26–28, 2025. This supports the existing research entry without adding another paper or conference record.

Research or activity source

Emotional intelligence and personal growth research

Jean T. Loquillano and co-author Joel Potane presented “Self-awareness, Emotional Intelligence, and Personal Growth: A Mediation Analysis Among College Students Aligned with the Sustainable Development Goals on Education and Well-Being” at ICMR, Vietnamese-German University, November 6–7, 2025. The College’s November 12 article places the paper in the Educational Psychology and Learning Well-Being track and explicitly links it with SDGs 3 and 4.

This record documents international communication of research on emotional development. It complements E2 by adding a different conceptual focus within student well-being. The public account does not provide mediation estimates, participant counts, a journal reference, or evidence of improved mental health following an intervention.

The same article reports a second team's TVET paper. That study is not counted here as a separate SDG 3 research output because the account does not establish an equivalent health focus for it. The selected health-related presentation retains its own title, authors, track, and conference status.

Research or activity source

Interpretation of Results

Around 27 bags of blood is a reported collection output and should not be converted into patients treated, lives saved or an exact donor count. The student-leader and external audience figures belong to different engagements; repeated participation is unknown. The research on child-friendly ALS spaces gives well-being a substantive place in the publication record, while its regional implementer sample remains distinct from CCCDO's student population. The current evidence supports delivery and dissemination more strongly than changes in health status.

During the 2025–2026 follow-through, health services can strengthen reporting through attendance records, appropriate learning checks, documented referral pathways and aggregate service data. A consistent distinction between awareness education, peer support and professional care will make the account clearer. Employee wellness evaluation should use a defined measure and period; blood collection should retain confirmation from the health partner.

Selected Activity and Research Documentation

Figure 10. Official photograph of the Dugong Bayani activity and participating partners.

Documentation source

Figure 11. Capture of the official workshop photograph published in the College article.

Documentation source

SDG 4 Quality Education

Quality Education is the central enabling strand of CCCDO's 2025 sustainability work. The evidence combines inclusive access, second-chance education, teacher-education research, digital and library resources, faculty dissemination, and technical-vocational completions. These contributions connect the availability of education with the conditions needed to enter, participate, learn and progress. They also support other goals through livelihoods, equity, health and climate literacy.

The most traceable research-development sequence is RITE 2: partnership approval for the mentorship study is followed by a workshop developing its instruments with Xavier University. The ALS research portfolio addresses geographic access, gender and spatial differences, implementation conditions and child-friendly learning environments. Alongside scholarship, the College documents outreach, assistance with training costs and provision of information resources.

Table 4 Documented 2025 Accomplishments

Initiative or record	2025 date or account	Partner or unit	Documented output or stage	Source article
TSTI training completion	23 June; 15 December	TSTI; technical-training partners	384 plus 381 reported graduates; annual ceremony sum 765	1054, 1305
RITE 2 mentorship research	May approval; 1–2 July workshop	TEC; Xavier University; CCCDO	PHP 2 million approved funding reported; tool development completed; expenditure unverified	1044, 1099
Inclusive ALS orientation	25 April	College Center for ALS; DepEd	Implementation dialogue for second-chance learning	1034
Digital learning access	13 March launch	DICT; TIDMAC	Free Wi-Fi launch following February inspection; no measured uptime series	919, 1003
Library resource support	22 August	Library partners and donors	Four desktops, two printers, two barcode scanners, one scanner and 200-volume allocation	1119
Research convening	15 August	College and research-network partners	96 presenters; 33 walk-in participants in separate reported categories	1117
Educational publications	2025 releases and alerts	College-linked authors and publishers	Community higher education, ALS access and quality, AI and language education	1228, 1230, 948, 780, 1438, 1232

Sources College article 1054 | College article 1305 | College article 1044 | College article 1099 | College article 1034 | College article 919 | College article 1003 | College article 1119 | College article 1117 | College article 1228 | College article 1230 | College article 948 | College article 780 | College article 1438 | College article 1232

Continuity and Development

The 2024 capacity-building work is followed by identifiable 2025 research stages, rather than only additional meetings. The same RITE mentorship project moves from approval to instrument development, while the PSFI agreement continues to support access costs. DICT's February inspection and the March Wi-Fi launch are successive records with different stages; the later launch adds delivery evidence without establishing network performance. The two ceremonies are combined within calendar year 2025, not arbitrarily assigned to an academic-year cohort.

Detailed Evidence and Knowledge Contribution

Community based higher education research

Community-Based Higher Education Initiatives and SDG 4: Meta-Analysis and Lessons for a Local City College

Authors: Ray Butch Mahinay, Pedro Gamba, Candice May Gamayon, and Psyche Cambo. International Journal for Multidisciplinary Research, 7(1), 2025. The College alert is dated January 17; the publisher records January 16. DOI: 10.36948/ijfmr.2025.v07i01.35041.

The study synthesizes 35 studies published between 2000 and 2024. It discusses educational inclusion, community participation, governance, partnerships, and service-learning. The 35 studies are the review's research based.

Research or activity source 1 | Research or activity source 2

Quality and protection in learning spaces

Child-friendly Learning Spaces in the Alternative Learning System ALS Focus on Northern Mindanao Philippines

Ray Butch D. Mahinay, Edralin C. Manla, Nancy S. Ramores, and Amparo V. Dinagsao. Southeastern Philippines Journal of Research and Development, 30(2), 47–62. Publisher date: September 30, 2025; College alert: October 13. DOI: 10.53899/spjrd.v30i2.1179.

The mixed-methods study surveyed 342 ALS implementers across 14 Northern Mindanao divisions and used focus groups. Learner participation, health, safety, achievement, teacher morale, and community support are among its dimensions. It identifies gaps in health services and infrastructure.

Research or activity source 1 | Research or activity source 2

Artificial intelligence and language education

The Permeates of Artificial Intelligence AI in Language Education A Thematic Synthesis

Author: Kurt S. Candilas. Journal identified by the College: Journal of Interdisciplinary Perspectives. College alert: February 7, 2025. DOI supplied: 10.69569/jip.2025.007.

The College account describes a thematic synthesis of AI use in Philippine language education, including perceived usefulness, creativity, implementation challenges, and ethical issues. It discusses infrastructure, privacy, integrity, and the need for policies and training.

Research or activity source 1 | Research or activity source 2

From research approval to tool development

The May 27 RITE 2 announcement identifies CCCDO, in partnership with Xavier University, as an approved teacher education research partner. It reports PHP 2 million approved funding for “Mentorship That Matters,” concerning predictive modeling for pre-service teachers in Visayas and Mindanao. A second indigenous and contextualized pedagogies study is named, with additional funding described as forthcoming. Approved funding is not reported here as expenditure.

On July 1–2, the two institutions held a tool-development workshop for the same mentorship study. The July 4 article describes variables, instruments, PPST alignment, ethics, and participatory revision. That source still lists pilot testing and field implementation as next steps.

This is the clearest direct progression in the research account: the same named initiative moves from approval to documented instrument preparation. The 2024 structural modeling workshop supplies a related capacity-building context.

Research or activity source 1 | Research or activity source 2

Interpretation of Results

The consolidated training output is 765, compared with 855 in the matched 2024 ceremony reports. Both 2025 ceremony counts are lower. That decline should be visible in an accountable progress report, alongside the continuing provision of seven listed qualification categories across the year. Cohort size, intake, assessment and employment data would be required to explain the change or judge effectiveness. Research respondents, library equipment and approved grant funding are reported in their own units and are not absorbed into the graduate total.

Proposed 2026 Follow Through

The 2025–2026 direction is to connect opportunity, delivery and outcomes through cohort-based records. For RITE 2, the next evidence should establish pilot testing, ethical clearance, fieldwork and outputs under the same project identifier. For learner support, the useful sequence is access, retention, assessment, completion and transition.

Selected Activity and Research Documentation

Documentation source

Figure 13. Official photograph published with the campus connectivity launch report.

Documentation source

SDG 5 Gender Equality

The 2025 Gender Equality evidence shows direct engagement with women's practical learning, workplace gender sensitivity, human rights and harassment education, LGBTQIA+ participation, and gender-responsive leadership preparation. It also includes a named publication examining gender disparities in ALS enrollment and completion. This makes the account more specific than a general assertion that every College activity benefits all genders equally.

The strongest delivery example is Eba Ka Talaga: four hours of basic electrical learning for over 70 solo parents and KALIPI members. Workplace training with the Philippine Commission on Women reaches a different audience, while Take Pride provides a community participation and recognition strand. The shared concern is fair opportunity and dignity, expressed through technical access, institutional learning and visibility.

Table 5 Documented 2025 Accomplishments

Initiative or record	2025 date or account	Partner or unit	Documented output or stage	Source article
Eba Ka Talaga	12 March publication	GAD; TSTI; CSWD; Solo Parent Program; KALIPI	Over 70 solo parents and KALIPI members; four-hour practical electrical session	782
Workplace gender sensitivity	18 March	PCW; College personnel	Gender issues, stereotypes, fairness and gender-fair communication	785
Rights and harassment education	13–14 February	CHRE; CHR Region 10	30 teaching and non-teaching participants	778
Take Pride and recognition	June account; September award account	Andam Higala; Gusa SK; HF Management; CCCDO	One inclusion initiative; 15 partner organizations, 12 sponsors and seven media allies by role	895, 1030
Women's leadership and GAD learning	24–26 March; 27–28 March	SHEroes organizers; PSNEI; CSU	Focal-person participation and educator-development content	789, 909
Gender-responsive local leadership	23 July preparation	DILG; city GAD Office; CCCDO	Course-design meeting; completed delivery not established	1108
ALS gender research	30 January alert	Mahinay; Naranjo; Faciol; Cena	One study across 14 divisions using 2017–2021 data	948, 1229

Sources College article 782 | College article 785 | College article 778 | College article 895 | College article 1030 | College article 789 | College article 909 | College article 1108 | College article 948 | College article 1229

Continuity and Development

Kaya't Kaya and the 2024 intramurals remain earlier-year context. In 2025, employee gender training continues the awareness theme with a different audience, while practical electrical learning adds a concrete access mechanism. Take Pride's event account and later award document successive stages of the same project.

Detailed Evidence and Knowledge Contribution

Highlighted research publication on gender disparities

Gender Disparities and Spatial Patterns in Alternative Learning System Enrollment and Completion

Ray Butch D. Mahinay, Freizie Hazil G. Naranjo, Roselyn A. Faciol, and Jefferson C. Cena are the authors identified in the College's January 30, 2025 alert. The paper is reported in the Mindanao Journal of Alternative Education Studies, Volume 2, Number 1 (2025), with DOI 10.17613/kyfk5-kgk86. Articles 948 and 1229 reproduce the same study and are treated as one publication.

The research examines enrollment and completion patterns across fourteen DepEd Region X Schools Division Offices using 2017–2021 data. The College's account reports higher rural enrollment but lower rural completion, a larger male share among enrollees, and higher female completion rates. It identifies financial support, flexible schedules, and gender-sensitive services as recommendations.

For SDG 5, the paper supplies a specific gender-focused research basis for discussing who enters and completes non-formal education.

Research or activity source 1 | Research or activity source 2 | Research or activity source 3

Women's access to practical electrical learning

The March 12, 2025 publication records Eba Ka Talaga, a four-hour basic electrical-skills activity conducted by CCCDO-GAD and TSTI during Women's Month. Facilitated by Romulo Arana, it addressed the Install Electrical Protective Devices unit of competency. The article reports over 70 solo parents and KALIPI members receiving knowledge and hands-on experience.

Partners identified are the City Social Welfare and Development Office, the Solo Parent Program–Cagayan de Oro, and Kalipunan ng Liping Pilipina. Mary Apple Dawn Tabafa is named as the CSWD representative and GAD/Solo Parent focal person. The publication date is retained because the narrative does not supply a separate exact event date.

The activity adds a concrete skills-access component to the 2024 awareness baseline. Its gender relevance lies in opening technical learning to the stated community audience.

Research or activity source

Recognition and the Take Pride partnership network

The September 4, 2025 College article reports that Take Pride 2025 received Most Outstanding City-Wide Project for Social Involvement recognition at the Oro Youth Awards–KASADYA Culminating Program, City Tourism Hall. The publication identifies CCCDO, Andam Higala Inc., the Sangguniang Kabataan of Barangay Gusa, and HF Management Consultancy as collaborators.

The same account describes fifteen partner organizations, twelve sponsors, and seven media allies. These figures are retained by role.

This is the clearest direct progression between two 2025 records: the June activity account is followed by a September publication reporting recognition of the same project. The award supplies external acknowledgment as reported by the College.

Research or activity source

Interpretation of Results

The electrical activity is evidence of practical access, not completion of a full NC qualification, certification, employment or income gain. The ALS paper is a 2025 research output about an earlier regional dataset, not a 2025 CCCDO enrollment audit. Its findings help frame questions about entry and persistence.

The 2025–2026 priority is to preserve the practical focus while documenting who participates and what follows. Appropriate aggregate information on access, completion, leadership opportunities and workplace experience would support a stronger equality assessment. Course preparation should be followed through to approved modules, delivery and application.

Selected Activity and Research Documentation

Documentation source

Figure 15. Official award documentation for Take Pride 2025.

Documentation source

SDG 6 Clean Water and Sanitation

The strongest 2025 SDG 6 evidence concerns protection of water-related ecosystems, coastal waste removal, environmental education and research communication. Baybayani records identify specific places, partner roles and selected outputs. Mission 626 adds an explicit clean-water connection in the College's conference-research account. The Higalaay volume contributes a separate dissemination role for externally authored water and treatment research.

The contribution should be understood at the level actually documented. Cleaning coastal areas can reduce local litter pressures and mangrove planting concerns water-related ecosystems; neither activity demonstrates safe drinking-water provision or wastewater treatment. The public record is therefore strongest on participation, environmental learning and outputs, rather than service-coverage or water-quality outcomes. This distinction allows useful cross-goal evidence to be retained without overstating its function.

Table 6 Documented 2025 Accomplishments

Initiative or record	2025 date or account	Partner or unit	Documented output or stage	Source article
Baybayani coastal cleanup	28 February	EOO; local residents; College personnel	30 sacks collected across three coastal areas; nearly 50 College faculty and staff	1150
Baybayani 2 mangrove planting	15 March	CLIMBS; KUSGAN; CCCDO	300 seedlings; 60 joint volunteers from the College and CLIMBS	1149
Earth Day cleanup	22 April	Community and environmental partners	Completed Agusan coastal activity; no separate waste quantity supplied	886
REAL TALK environmental learning	24 October	NSTP; CLENRO; Oro Rescue; DOH–TRC	Cleanup and plastic-reduction content within a multi-topic program	1227
Mission 626 research	6–8 November	College research team; NMSCST	Conference dissemination explicitly mentioning clean water	1260
Water-related abstract publishing	2025 volume	CCCDO as publisher; external author institutions	Five selected abstracts on governance, desalination, filtration, treatment and irrigation	Volume

Sources College article 1150 | College article 1149 | College article 886 | College article 1227 | College article 1260

Higalaay 2025 abstract volume

Continuity and Development

The earlier conservation extract and the historical Water Conservation Month article provide context, but not a measured 2025 conservation outcome. The latter is displayed as a 2023 account and must not be relabeled. The 2024 Bonbon article is an announcement, whereas the 2025 Gitagum record reports completed planting. Different sites and different stages prevent a numerical growth claim. REAL TALK belongs to October 2025 despite its placement in older summaries.

Detailed Evidence and Knowledge Contribution

Highlighted College research on Mission 626

Mission 626 as a Community Extension Based Model for Youth Leadership and Sustainable Development

Authors Ray Butch D. Mahinay, Herna Francis Mae B. Tano, Joel M. Nob, Jason Basiculan, and Gemma E. Gonzales are named in the College's November 8, 2025 article. The study was reported at the 6th NMSCST Research Congress, November 6–8, under Social Sustainability and Community Well-being.

The account identifies Mission 626 as an extension-based youth leadership model involving civic engagement, volunteerism, and sustainability. It explicitly includes access to clean water alongside poverty, food security, and health, linking the study with SDGs 1, 2, 3, and 6. The paper received first-place Best Paper recognition; Tano received third Best Presenter under that track.

Research or activity source

Water Governance Research in Tangub City

Edison B. A. Enerio of Tangub City Global College authored this abstract on printed page 20, PDF page 42. It reports a concurrent mixed-method assessment involving 256 water-consumer representatives and interviews with water-district informants. The abstract identifies incomplete implementation of water-related statutes and difficulties with financial and local coordination.

The proposed response emphasizes inter-agency coordination and financial support. Its relevance is institutional water governance, a distinct contribution from cleanup activities or technical prototypes. The 256 respondents belong to the Tangub study; they are not CCCDO beneficiaries or evidence of a College water service.

The College's contribution evidenced here is publication and dissemination. The abstract does not establish adoption of its recommendations in Tangub or CCCDO. Its presence adds a policy-implementation perspective to the 2025 research account without being relabeled as College-authored research.

Solar desalination research for Macabalan

Solar Powered Desalination A Cost-Effective Solution for Clean Drinking Water in Barangay Macabalan

Christian James B. Sayson, Shanine Kristel Hinaut, Angel Jackiesha Moraga, John Mark Salido, Keira Faith Saraos, Mary Hyacinth Zamora, and Maria Angeles Hinosolango are affiliated with USTP. Their abstract appears on printed page 27, PDF page 51. It reports community interviews and testing of a passive solar desalination prototype.

From five liters of seawater input, the abstract reports one liter evaporated and only fifty milliliters recovered as distilled water, with vapor leakage identified as a limitation. Those values describe a preliminary prototype test, not five liters of usable drinking water or an operational community supply. The abstract's statement about meeting most potability standards is not treated as complete safety certification.

Interpretation of Results

Thirty sacks are collection units rather than kilograms, and 300 seedlings are planting units rather than surviving trees. The 60-person figure is a joint event count, not College-only attendance. These figures make the environmental account concrete.The inherited guideline text contains recommendations and an organization placeholder, so it is not treated as a newly verified signed institutional policy.

The 2025–2026 operational priority is a consistent water record: supply and consumption readings, documented sanitation facilities, maintenance and treatment records, and appropriate testing. Ecosystem activities need site-based follow-up, while waste collection should retain measurements and disposal documentation. Where the College disseminates external treatment research, the author affiliation, prototype stage and test conditions should remain visible.

Selected Activity and Research Documentation

Documentation source

Figure 17. Official photograph of the March mangrove planting initiative and participating volunteers.

Documentation source

SDG 7 Affordable and Clean Energy

CCCDO's strongest tangible 2025 clean-energy accomplishment is one newly installed solar-powered study shed, turned over on June 2 and followed by a ceremonial Deed of Donation signing on June 7. The project connects renewable-energy use with a student space for learning, collaboration and powering devices. Its significance lies in a documented physical facility and partnership, rather than an estimated share of campus electricity.

The energy contribution has three distinct components: an installed student facility, access to an energy-relevant research consortium, and dissemination of external energy-related studies. Keeping these roles separate makes the account stronger. Consortium membership creates opportunities for collaboration, while publication allows research ideas to circulate.

Table 7 Documented 2025 Accomplishments

Initiative or record	2025 date or account	Partner or unit	Documented output or stage	Source article
Solar-powered study shed	2 June turnover	Mindanao Goes Solar; College; student government	One installed learning space reported	1049
Donation documentation	7 June ceremony	Linkages and Partnerships Office; project partners	Deed of Donation signing reported for the same shed, not another installation	1049
Energy-relevant research network	12 November induction	DOST–NorMinCIEERD	Formal membership; College reported as consortium's 31st member	1272
Energy research dissemination	2025 Higalaay volume	College publisher; external author institutions	Seven selected abstracts with solar, biogas or proposed energy-harvesting components	Volume

Sources College article 1049 | College article 1272

Higalaay 2025 abstract volume

Continuity and Development

The 2024 exploratory solar meeting and the 2025 shed support continuity in institutional interest in renewable-energy partnerships. Their named lead organizations differ, so the evidence does not establish a single uninterrupted contract. The defensible progression is from exploratory engagement to a documented completed facility, without calling the shed the College's first installation or calculating growth.

Detailed Evidence and Knowledge Contribution

Solar-powered study shed: completed campus output

The official account reports formal turnover on June 2, 2025. Project Supervisor Magi Caroline Ann Mendoza and Mindanao Goes Solar Managing Director Helen Grace Uy turned over the newly installed shed. College President Jestoni P. Babia and Central Student Government President John Florence Taban received it for the College community.

The shed is described as a safe, sustainable space for students to learn, collaborate, and power devices. This combines a practical renewable-energy application with a student learning environment. The article's own SDG 7 and SDG 17 tags support both the clean-energy and partnership classifications.

The source confirms the project's existence and reported turnover. "Accessible" describes the intended learning function.

Research or activity source

Research capacity: NorMinCIEERD membership

The November 24, 2025 article reports CCCDO's formal induction on November 12 during the Governing Board Meeting at N Hotel, Cagayan de Oro City. The College became the first Local University College to join DOST–Northern Mindanao Consortium for Industry, Energy and Emerging Technology Research and Development and its 31st member institution.

College President Jestoni P. Babia took his oath before consortium chair and USTP System President Ambrosio B. Cultura II. The College article presents membership as opening opportunities for collaboration across industry, energy, and emerging technology.

Its relevance to SDG 7 is the energy-research remit and access to collaborative research networks. The article is tagged by the College under SDGs 4, 8, and 9; its use here is an explained cross-goal interpretation. Membership is not proof of a completed energy study, funded energy grant, new patent, or additional solar installation.

Research or activity source

Solar-powered desalination

Solar-Powered Desalination: A Cost-Effective Solution for Clean Drinking Water in Barangay Macabalan

Christian James B. Sayson and co-authors; University of Science and Technology of Southern Philippines. Printed page 27; PDF page 51.

The abstract describes a passive solar desalination prototype for Barangay Macabalan. A test used five liters of seawater; one liter evaporated, but only fifty milliliters were recovered because vapor escaped. These are distinct volumes at different stages, rather than five liters of drinking water produced.

Research or activity source

Solar-powered vertical aquaponics

Aquaponic-Tower System: Development of a Vertical IoT-Enabled Aquaponics System for Lettuce Cultivation and Catfish Rearing with Real-Time Web Monitoring

Marchael Brenan N. Corpus, Rommel Jr. A. Rodriguez, and Perland B. Pellerin; Benigno “Ninoy” Aquino High School Integrated SHS. Printed page 46; PDF page 72.

Research or activity source

Interpretation of Results

The project account does not provide module wattage, battery capacity, inverter specifications, generation readings or maintenance performance. The seven abstracts belong to one publication platform and retain external affiliations. A concept involving energy harvesting is presented as a research proposal, not an independently demonstrated source of net renewable power.

For the 2025–2026 follow-through, the solar facility should be linked to its technical specifications, commissioning and maintenance records, generation data and student use. Measured output and electricity charges could then support a bounded performance assessment. Research-network opportunities can be tracked through actual proposals and funded work rather than membership alone. Additional installations require their own delivery evidence.

Selected Activity and Research Documentation

Figure 18. First official photograph published with the solar study shed account, July 17, 2025.

Documentation source

Figure 19. Second official photograph accompanying the College's account of the project and partnership milestones.

Documentation source

SDG 8 Decent Work and Economic Growth

The 2025 SDG 8 record connects vocational preparation with practical employment support, entrepreneurship learning and workplace well-being. TSTI reports 765 graduation completions across two ceremonies. Continuing SKIL coordination, a DOLE internship agreement and an application-document workshop address stages between technical learning and employment. RISE Mindanao adds support for existing entrepreneurs from conflict-affected areas.

Decent Work includes both access to work and the quality of working conditions. The College's portfolio therefore spans qualifications, job-application readiness, planned government experience, enterprise skills, employee wellness and research on organizational justice. These are complementary contributions. A graduation ceremony is a training-output record, an agreement is an enabling arrangement, and a workshop is a delivered learning activity.

Table 8 Documented 2025 Accomplishments

Initiative or record	2025 date or account	Partner or unit	Documented output or stage	Source article
Technical-vocational completions	June and December	TSTI; training and industry partners	765 combined reported graduates across seven listed qualification categories	1054, 1305
SKIL continuation	February and March accounts	PSFI; PESO; College	Support for training and assessment costs; EIM added to the cooperation scope	1013, 916
Government Internship Program	25 March agreement	DOLE; PESO; CCCDO	Signed pathway for government-office experience; completed placements unreported	912
TARA-baho	25 April	TSTI; PSFI	Application-document workshop for EIM NC II scholars	1035
RISE Mindanao	24–25 October	Capitol University; AmCham; GDG CDO; College	25 entrepreneurs in a two-day digital-business and leadership bootcamp	1249
Workplace and research support	May; March alert; November conference	College offices; research partners	Employee wellness, organizational-justice publication and future-ready TVET presentation	1047, 1233, 1258

Sources College article 1054 | College article 1305 | College article 1013 | College article 916 | College article 912 | College article 1035 | College article 1249 | College article 1047 | College article 1233 | College article 1258

Continuity and Development

The July 2024 PSFI agreement is explicitly carried into the February review and March cooperation account. The shift to EIM support and the April job-application workshop provide a more specific employability pathway than an unqualified statement that all graduates were placed. The DOLE agreement supplies a different work-experience mechanism. These records are related stages.

Government internship partnership

CCCDO's March 26, 2025 article reports a Memorandum of Agreement with DOLE for the Government Internship Program, signed March 25. The program envisages work experience in government offices through tasks such as data encoding, employment profiling, and community service. PESO Cagayan de Oro is acknowledged as facilitating the partnership.

The verified milestone is the partnership agreement. Its relevance to SDG 8 is the creation of an institutional pathway for young people to develop workplace experience and public-service skills.

Future-tense descriptions of intern responsibilities are therefore retained as intended implementation. The agreement is not converted into a count of completed placements. Compared with the 2024 job fair, this is an additional documented mechanism for the transition from learning to work, with a different delivery model and evidentiary stage.

Research or activity source

TARA baho employment application workshop

On April 25, 2025, CCCDO–TSTI and PSFI held TARA-baho, a workshop on employment application documents, at the College EdTech Laboratory. The May 8 article identifies the participants as PSFI scholars enrolled in EIM NC II and names Vonn Francis Cantila as resource speaker.

The activity addresses a practical transition between technical competence and a job application: preparing professional documents and understanding how to approach the employment process. Its connection with the March EIM expansion makes the continuity more specific than a general claim of ongoing employability support.

The article establishes that the workshop occurred for a defined participant group. It does not publish attendance, a pre- and post-assessment, interview conversion, hiring outcomes, or a comparison group. Increased confidence is an intended benefit rather than a quantified improvement reported here.

Highlighted 2025 journal publication alert

Teachers' Perceptions of Organizational Justice and Culture: Their Influence on Organizational Commitment

The College's March 7, 2025 alert identifies this study by Vanessa Mae Z. Caminos of Suntingon Elementary School and CCCDO's Mark Raymond S. Tan, published in Journal of Interdisciplinary Perspectives, Volume 3, Number 4 (2025). The alert supplies DOI 10.69569/jip.2025.039.

The source describes a descriptive correlational survey of 282 public school teachers in East District II, Cagayan de Oro. It reports statistically significant relationships involving organizational justice, culture, and commitment. This supplies a substantive workplace dimension to the SDG 8 research evidence.

Fair organizational treatment and supportive work environments are relevant to the quality of work. The findings concern surveyed public-school teachers; they are not a survey of CCCDO personnel.

Research or activity source 1 | Research or activity source 2

International TVET research presentation

Beyond Certification and Global Inclusion: Assessing the Role of TVET in Advancing SDG-Aligned and Future-Ready Technical Education in Mindanao, Philippines

The November 12, 2025 article reports presentation of this study at the International Conference on Multidisciplinary Research at Vietnamese-German University, November 6–7. It names Psyche B. Cambo, Charlie Job D. Sumili, Aiza Mae D. Cahansa, and Jonathan Madronero as the CCCDO research team.

The study addresses responsive TVET curriculum, industry partnerships, and sustainability in preparing learners for future work. It complements the training-completion and employment-pathway evidence by showing scholarly examination of technical education's role. The same conference article covers another team's student well-being research; that separate study is not counted here as an additional SDG 8 TVET paper.

Research or activity source

Interpretation of Results

The program mix contains 234 EIM, 213 Housekeeping, 100 SMAW NC I, 90 Barangay Health Services, 77 SMAW NC II, 40 Plumbing and 11 Carpentry completions. These sum to 765. The annual figure is 90 lower than the comparable 2024 series. It measures volume, not an employment or quality rate. The workplace study concerns public-school teachers, while the entrepreneur bootcamp concerns a separate population.

A useful 2025–2026 transition register would connect graduates with assessment results, placements, work conditions and retention after a defined period. The internship agreement needs deployment and completion records before placement claims can be made. RISE follow-up can document formalization, use of digital tools and enterprise continuity. Employee wellness should be assessed through appropriate aggregate measures rather than expressions of appreciation alone.

Selected Activity and Research Documentation

Figure 20. Official documentation of the April 2025 TARA-baho workshop.

Documentation source

Figure 21. Official photograph of the 2025 RISE Mindanao entrepreneurship bootcamp.

Documentation source

SDG 9 Industry Innovation and Infrastructure

CCCDO's 2025 SDG 9 contribution is strongest in the institutional capacity behind innovation: intellectual-property learning, exposure to fabrication and commercialization systems, innovation-proposal development, research-management training, digital preparation and formal research-network membership. These activities develop the conditions needed to turn ideas into tested and usable outputs, without implying that commercialization was already achieved.

The record also contains an AI-related Springer chapter, an international GenAI presentation and stakeholder research planning on local market systems. Together, these show both research communication and the development of supporting organizational capabilities. Digital access and library-system training complement this work by addressing infrastructure and information management. The overall account distinguishes learning about technology from owning, licensing or deploying it.

Table 9 Documented 2025 Accomplishments

Initiative or record	2025 date or account	Partner or unit	Documented output or stage	Source article
DICT connectivity sequence	6 February inspection; March launch	DICT; TIDMAC	Inspection followed by separately documented Wi-Fi launch; service performance unmeasured	1003, 919

AI scholarship and enterprise innovation	February release; November account; October bootcamp	College-linked researchers and partners	Springer chapter; GenAI dissemination; RISE training for 25 entrepreneurs	1231, 1280, 1249

Sources College article 1003 | College article 919 | College article 899 | College article 1335 | College article 1106 | College article 957 | College article 1265 | College article 1272 | College article 1231 | College article 1280 | College article 1249

Continuity and Development

The 2024 RDLead orientation, AI webinar and DOST research-agenda work are followed in 2025 by more specific IP, proposal and management activities. The College's admission to NorMinCIEERD is a formal network milestone, but it is a different consortium from the earlier RICEFIELD exploratory meeting. The DICT record should be read across the source files: a February inspection is preparation, while the March launch adds a subsequent service milestone.

Detailed Evidence and Knowledge Contribution

Highlighted AI research publication

Factor Analysis of AI's Impact on Academic Writing: A Study on ChatGPT's Influence on Student Performance and Confidence

The College issued its publication alert on February 4, 2025. The Springer publisher page gives a first-online date of February 1, 2025, while retaining 2024 in its suggested citation and copyright information. The chapter is included here as a verified 2025 online-release and dissemination record, with the publisher's citation year preserved.

The study analyzes responses from 314 EFL participants in Oman using exploratory factor analysis. It identifies three factors concerning essay skills, AI in education, and academic-writing processes. Its SDG 9 relevance lies in research on the use and integration of a digital technology; its direct instructional application also concerns SDG 4.

The authors are Dennis Primne Corbita, Michelle Mendoza, Miriam Cordova, Rosalie Balmas, Jonathan Madronero, and Carthelyn Adajar. The College recognizes Madronero in its alert; Springer lists the chapter authors under University of Technology and Applied Sciences, Ibri, Oman. The research sample is not a CCCDO student cohort, and survey factor analysis alone does not establish a causal improvement in writing.

Research or activity source 1 | Research or activity source 2

Research on generative AI and student engagement

Student Engagement and Academic Performance: The Moderating Role of Generative AI Usage among College Students

The November 25, 2025 College article reports a presentation by Ma. Katerina F. Janubas at the third International Conference and 24th National Convention of APNIEVE Philippines at Liceo de Cagayan University. It identifies the presentation as part of Day 2, without supplying a separate calendar date for that session.

The source describes a survey of one hundred second-year college students and reports that engagement and sustained student effort were associated with stronger academic performance. The research addresses how AI use relates to learning behavior rather than treating access to AI as sufficient evidence of academic improvement.

Research or activity source

Building capability for digital library services

Melody R. Agcito and Janice A. Calapiz participated in training on the Koha Integrated Library System for Public Libraries at the National Library of the Philippines on October 22–24, 2025. The College reported their participation November 13.

Koha provides an open-source approach to cataloging, circulation, and access to library resources. Training library and technology personnel together is relevant to the capacity needed to manage information services. This supports the SDG 9 theme of digital innovation and enabling infrastructure, with a parallel contribution to education.

The article documents training participation by two named personnel. It describes intended contributions to digital transformation but does not establish a completed data migration, a live production catalog, a number of digitized records, or reduced service time. Its connection with the DICT inspection is complementary: connectivity and information-management skills support different parts of digital access.

Research or activity source

Proposed skills innovation infrastructure

Voltaire E. Lopez II; University of Science and Technology of Southern Philippines. Printed page 2; PDF page 24.

The abstract proposes a comprehensive TVET innovation center in western Misamis Oriental, connecting training access with industrial development and Industry 4.0 skill requirements. It presents a facility concept intended to support a workforce prepared for emerging industries.

Research or activity source

The innovation ecosystem remains a capacity-and-development account rather than a quantified technology-transfer ledger. Equipment seen at CSU and MSU-IIT remains the host institutions' infrastructure. Proposed offices, policies and commercialization pilots are not completed simply because they were discussed. The Springer output is a book chapter with a first-online release in 2025; a separate December 2024 chapter retains its earlier date. Samples of 314 participants or 100 students in research are study populations.

For the 2025–2026 follow-through, project tracking should connect ideas to proposals, approvals, prototypes, validation, IP protection and eventual use. Infrastructure records should distinguish purchase, installation, commissioning and service performance. Research-management and benchmarking activities can be evaluated by subsequent outputs under traceable project identifiers. Patents, licenses, external funding and commercial returns require their own documentary records.

Documentation source

SDG 10 Reduced Inequalities

The 2025 Reduced Inequalities record addresses barriers to learning and participation through ALS orientation, program consultation, after-hours outreach, rights education, Indigenous student representation, LGBTQIA+ inclusion and review of student services. The common institutional concern is whether opportunities are practically reachable and responsive to learners with different circumstances.

The evidence goes beyond access announcements by including reflection on support services and research on unequal learning conditions. Four College-linked ALS publications examine gender and location, transport barriers, implementation and learning-space quality. Community and student activities provide implementation context, but they are not treated as proof that a specific publication's recommendations were adopted. The account connects the themes while preserving the difference between scholarship, consultation and completed service.

Table 10 Documented 2025 Accomplishments

Initiative or record	2025 date or account	Partner or unit	Documented output or stage	Source article
ALS practitioner orientation	25 April	College Center for ALS; DepEd	Dialogue on flexible second-chance education	888, 1034
ALS program consultation and agreement	21 May; 18 July	DepEd CDO; College; stakeholder partners	Pagpamalandong, Pagtulay and Paglantaw developed within one collaboration	1043, 1114
Night Caravan	26 August account	TSTI; five named barangay partners	Evening demonstrations and program information; no unique attendance total	1134
Rights capacity building	13–14 February	CHRE; CHR-X	30 personnel in a documented workshop	778
Indigenous student participation	1 August	City IP partners; named CCCDO Higaonon student	Over 80 delegates city-wide; not all College students	1111
Take Pride and support review	June/September accounts; 28 February review	Community collaborators; OSAS; College offices	Inclusion initiative and support-service evaluation; no equity trend score	1030, 1312
Inclusion research	2025 publications	College-linked authors and journal publishers	Four ALS studies; research samples and historical periods kept separate	948, 1230, 780, 1438

Sources College article 888 | College article 1034 | College article 1043 | College article 1114 | College article 1134 | College article 778 | College article 1111 | College article 1030 | College article 1312 | College article 948 | College article 1230 | College article 780 | College article 1438

Continuity and Development

The earlier ALS-center visits and barangay information work establish a continuing access agenda. The 2025 sources add practitioner orientation, consultation on bridging and career-mapping support, and an agreement for three named ALS initiatives. The May consultation planned an August 2025–January 2026 pilot period; the July agreement is a later formalization record. Neither alone proves pilot completion in 2026.

Detailed Evidence and Knowledge Contribution

Consultation on ALS support programs

At a DepEd Cagayan de Oro stakeholders' session on May 21, 2025, CCCDO introduced three ALS initiatives. The May 22 account identifies participation by ALS implementers and representatives of BJMP, the DOH rehabilitation center, Xavier University Night School, PHINMA Cagayan de Oro College, Island Kids Foundation, and other partners.

Pagpamalandong is action-research mentoring program for teachers. Pagtulay is a weekend bridging academy intended to strengthen learners' readiness and foundational competencies. Paglantaw is a career-mapping initiative intended to support pathway planning. Together, the proposals address teacher support, academic readiness, and decisions after ALS.

The verified milestone is presentation and consultation on program design. The article describes a planned pilot period from August 2025 to January 2026; it does not document completed delivery throughout that period. The report therefore treats the three named initiatives as proposed support mechanisms, without inventing pilot enrollment, learning gains, or completion totals.

Their SDG 10 relevance lies in responding to barriers that persist after access to an ALS center. Teacher development, bridging, and career guidance could support participation at different stages, but their effectiveness requires implementation and follow-up evidence.

Research or activity source

Indigenous student voice and participation

The College's August 4, 2025 account identifies Higaonon student Micah Jabiniar Aguilar of Barangay Cugman opening the first IP Youth Assembly on August 1 at Cronin Hall. The report describes her message on education, cultural preservation, and community advocacy.

The assembly brought together over eighty IP youth delegates from the hinterland communities named in the article. It was led by the city's social-welfare IP section with other city partners. CCCDO's documented connection is the leadership and participation of a named student, rather than ownership of the city-led assembly or enrollment of all its delegates.

The SDG 10 contribution concerns representation and an opportunity for Indigenous youth to speak in a community forum. This is evidence of participation and recognition. It does not establish institution-wide Indigenous enrollment, retention, scholarship coverage, or a measured change in discrimination. The student's account is not generalized to every Indigenous learner.

Research or activity source

Published evaluation of ALS learning spaces

Child-friendly Learning Spaces in the Alternative Learning System (ALS): Focus on Northern Mindanao, Philippines

The publisher identifies Ray Butch D. Mahinay, Edralin C. Manla, Nancy S. Ramores, and Amparo V. Dinagsao as authors, with Mahinay affiliated with CCCDO. The article was published September 30, 2025, in Southeastern Philippines Journal of Research and Development, 30(2), 47–62; DOI 10.53899/spjrd.v30i2.1179.

Using a descriptive-evaluative mixed-methods design, the study surveyed 342 ALS implementers across fourteen Schools Division Offices and used focus groups. It examines learning spaces through participation, health, safety, enrollment, achievement, teacher morale, and community support. The publisher reports strengths in engagement and motivation alongside gaps in infrastructure, health services, and resourcing.

The research links access with the conditions in which people learn. A center may be geographically available while still lacking facilities or support. This extends the report's access discussion beyond outreach and enrollment information toward the physical and institutional environment of second-chance education.

Research or activity source 1 | Research or activity source 2

Interpretation of Results

An inclusive opportunity is not yet a measured reduction in inequality. The named student's leadership at a city IP assembly documents representation; the assembly total is not an Indigenous enrollment count for CCCDO. The student-support evaluation confirms that findings were presented, but its scores and subgroup results are not published. Similarly, the Night Caravan addresses scheduling and information barriers without establishing how many contacts enrolled or completed a qualification.

The 2025–2026 direction is to follow learners through access, support, participation and progression, using appropriate aggregate categories and consistent definitions. The ALS initiatives need implementation and completion records linked to the agreement. Student-service review should retain its sample, response rate, action plan and follow-up.

Selected Activity and Research Documentation

Figure 24. Published photograph of Higaonon student participation at the IP Youth Assembly. Source credits CDO City Information Office and Bae Rose Lumandong.

Figure 25. Official documentation of the May 2025 ALS stakeholder consultation.

Documentation source

SDG 11 Sustainable Cities and Communities

CCCDO's 2025 SDG 11 contribution links cultural heritage, community knowledge resources, environmental leadership and preparedness. The public record documents Kagay-an reference-grammar development, receipt of a literary facsimile, community environmental training, campus drills, Barangay Agusan emergency training and climate-resilience research communication. These activities connect the College's educational role with local institutions and community settings.

The cultural and preparedness strands are complementary rather than interchangeable. Heritage work concern's identity, language and access to cultural resources; drills and emergency training concern organizational readiness. Environmental facilitation supports community actors who organize waste-related action. The report identifies the output of each strand instead of presenting all participation as a single measure of sustainable urban development.

Table 11 Documented 2025 Accomplishments

Initiative or record	2025 date or account	Partner or unit	Documented output or stage	Source article
Kagay-an reference grammar	17 January	College researchers and collaborators	Collaborative development session; completed publication not established	950
Library heritage resource	March account	National Library; College Library Services	Noli Me Tangere facsimile received; barangay reading-center program introduced	913
GREEN environmental leadership	April; June accounts	WWF-Philippines; CLENRO; community actors	Facilitation in CDO, Caloocan and Quezon City	897, 1095
Earthquake preparedness	19 June; 11 September	Health and Safety Officer; committee; campus community	Two dated drills with procedural review	1143, 1073
Project LIGTAS	7–11 July in source body	NSTP; Barangay Agusan; CDRRMO	Five-day Basic Life Support and First Aid training; no trainee total	1138
Baybayani 4	6 December	EOO; CIVIC; Andam Higala; CLENRO; KUSGAN	Orientation, planting and cleanup in Macasandig	1303
Resilience courseware dissemination	9 October	College; Capitol University; PAFTE	Conference account reports testing and learning indicators with methodological limits	1160

Sources College article 950 | College article 913 | College article 897 | College article 1095 | College article 1143 | College article 1073 | College article 1138 | College article 1303 | College article 1160

Continuity and Development

The 2024 Indigenous consultation and language research provide a thematic context for reference-grammar work, without proving one project's authorization by another. The repeated 2025 drills document continuing practice. June observations about incomplete protective actions and obstructed routes are useful operational evidence, but the September drill does not by itself establish correction of every June issue. The GREEN partnership similarly demonstrates continuity of educational engagement across locations, not operation of municipal waste systems.

Detailed Evidence and Knowledge Contribution

Kagay an reference grammar development

On January 17, 2025, the College held a collaborative session on developing a Reference Grammar for Kagay-an Heritage. Joel Potane and Charlie Job Sumili facilitated discussion of its structure and curriculum development. The official account connects the work with the linguistic characteristics and cultural identity of Kagay-anon communities.

The verified stage is collaborative development. The record does not supply a completed manuscript, publication identifier, release date, community validation results, or formal curriculum adoption. It therefore supports a research-development activity rather than a claim that a reference grammar was published in 2025.

Research or activity source

June earthquake drill and operational learning

On June 19, 2025 at 9:00 AM, the College conducted a nationwide-synchronized earthquake drill involving employees, students, and guests. The Health and Safety Officer and committee organized response practice, evacuation, room checks, and assembly headcounts.

The report identifies both response strengths and operational issues. These include participants leaving before completing the full protective procedure and vehicles partially obstructing evacuation routes. Recording these observations makes the evidence more informative than a general claim that a drill occurred.

The activity supports disaster preparedness under SDG 11. The source does not provide evacuation duration, a numerical attendance count, independently scored readiness, or proof that every identified obstruction was later removed. The finding is that an exercise and review took place; improved performance across years cannot be calculated.

Research or activity source

Climate and disaster resilience research activity

The October 16 College article reports presentation on October 9, 2025 at the PAFTE convention at Saint Louis University, Baguio City. Jestoni P. Babia led the presentation of work developed alongside

Capitol University on climate and disaster resilience courseware and learning videos for vulnerable communities.

The materials use the ADDIE model and Mayer's Multimedia Learning Theory. The source reports testing during January–June 2025, with 92% engagement and a 28% increase in climate literacy. These are College-reported study findings. The article does not provide the sample size, instruments, denominator, or uncertainty needed to independently evaluate the percentages.

The SDG 11 connection is disaster education and readiness. The verified output is a conference presentation and public research account. No journal title, individual DOI, or full peer-reviewed article is established by this webpage. The reported learning results are not translated into fewer disaster casualties or losses.

The College-published Higalaay Multidisciplinary Research Abstract, Volume 2, Number 1, carries 2025 research on heritage, waste systems, and urban food production. Selected entries below are externally authored. College publication establishes dissemination, not College authorship or campus implementation.

Research or activity source

Interpretation of Results

The most valuable accomplishments are those with clear institutional roles: a development session, an acquired resource, delivered training and completed exercises. The 92% engagement and 28% climate-literacy increase reported for courseware remain source-reported study findings, because the public account lacks a sample and calculation method. They are not extrapolated into a citywide resilience score. A library program introduction is likewise retained as preparation rather than a certification total.

During the 2025–2026 follow-through, heritage work can be strengthened by manuscript milestones, community validation and appropriate permissions. Library support needs service-use evidence. Preparedness reporting should retain comparable evacuation timings, route audits, identified issues and verified corrective action. Community training should link learning to approved local action and subsequent implementation where possible.

Selected Activity and Research Documentation

Figure 26. Official photograph accompanying the reference grammar development account.

Documentation source

Figure 27. Official photograph from the June earthquake drill account.

Documentation source

SDG 12 Responsible Consumption and Production

The 2025 SDG 12 evidence is centered on community environmental learning, plastic-use education, coastal cleanup and research dissemination on materials and recovery. The GREEN Learning Series with WWF-Philippines is its strongest coherent partnership strand: the College facilitates with community and waste-management actors in several locations and publicly documents a related agreement milestone.

The portfolio demonstrates an educational contribution to responsible resource use rather than a measured campus circular-economy system. Training leaders and waste workers can support organized action; cleanup records establish practical participation. The Higalaay volume provides a venue for external research on packaging, reusable service systems, fiber materials and kitchen-waste recovery. These contributions are valuable at their documented stages without implying College procurement or deployment.

Table 12 Documented 2025 Accomplishments

Initiative or record	2025 date or account	Partner or unit	Documented output or stage	Source article
GREEN in Cagayan de Oro	22–23 April in source body	WWF-Philippines; CLENRO; College	Leadership, community visioning and financial-literacy facilitation	897

Higalaay 2025 abstract volume

Continuity and Development

The earlier bamboo-hub meeting and procurement summit remain planning and learning baselines. They do not establish an operating 2025 bamboo production system or approved green-procurement expenditure. The 2025 GREEN records add delivered facilitation and related partnership documentation. Some training precedes the June agreement ceremony, so the sequence is described as continuing cooperation rather than all delivery beginning after signing.

Detailed Evidence and Knowledge Contribution

GREEN learning in General Luna Siargao

Article 1050 reports that the College co-facilitated GREEN Learning Series Module 3 in General Luna, Siargao in May 2025. The June 11 account places the workshop at Langojon Jianjoy Beach Resort and identifies barangay leaders, youth representatives, civil society partners, street sweepers, and waste collectors among participants.

Santos, Torres, and Cantilla guided reflective and community-focused learning. The workshop's inclusion of waste workers gives it a substantive SDG 12 connection: the College contributed educational support to actors who handle waste in their communities. Its relevance comes from the content and participants, rather than an assumption that all leadership training produces environmental improvements.

The article connects this engagement with the preceding Cagayan de Oro leg. This supports continuity within the GREEN series. It does not supply exact workshop days, attendance, waste-service changes, or plastic-reduction results. The account is counted once, and the College is not described as operating General Luna's waste-management system.

Research or activity source

REAL TALK and plastic reduction education

On October 24, 2025, the College held REAL TALK 1 for CWTS and LTS students. The October 28 account describes a cleanup inside and outside campus, followed by sessions on disaster preparedness, plastic use, and health. CLENRO speaker Karen Mishelle Daba Camaro-Mapano delivered the plastic-reduction discussion.

The SDG 12 evidence is the cleanup and the discussion encouraging reduced plastic use. Other sessions provide context for the event but are not counted as separate consumption-and-production outputs. The source identifies the event's educational content without publishing the quantity of waste removed or a later change in purchasing and disposal habits.

The activity establishes delivery of awareness learning alongside community action. It does not establish enforcement of a campus plastics policy or a measured reduction in single-use products. An attendance sheet, waste audit, or repeated behavior measure would be needed to make those additional claims.

Research or activity source

Published research on packaging and reuse

Kong Hua School authors report paper bags using banana pseudostem and coconut fiber, with a prototype load of 1.61 kg. This is research performance, not College packaging procurement.

Research or activity source

Published research on materials and recovery

Gusa Regional Science High School authors explore coir and banana-fiber insulation panels. The abstract describes expected performance; certification and College installation are not established.

Research or activity source

Interpretation of Results

No matched campus waste-weight series, recycling destination register, purchasing denominator or diversion audit is supplied. The benchmark's 8% waste-reduction figure is therefore not carried into the updated report. External prototypes—including packaging from agricultural byproducts and automated reusable trays—illustrate disseminated ideas. One research test reporting a 1.61 kg bag load is a prototype measurement, not a procurement or waste outcome.

The 2025–2026 direction is to link awareness with a materials record: quantities purchased and discarded, segregation and recovery routes, supplier requirements and evidence of use. Community facilitation should retain sessions, participants, action plans and follow-up. Proposed recovery technologies require testing and operational evidence before their environmental benefits can be included as institutional outcomes.

Selected Activity and Research Documentation

Figure 28. Official photograph accompanying the Siargao GREEN workshop account.

Documentation source

Figure 29. Official photograph accompanying the Caloocan and Quezon City training account.

Documentation source

SDG 13 Climate Action

CCCDO's 2025 Climate Action record is strongest in climate-change education, research development and dissemination of locally developed learning resources. The ATECCE Phase 2 sequence connects an international educational network with a Philippine workshop, an MOU, research presentations, a functioning courseware demonstration and selection of two projects for support. These are identifiable educational contributions rather than estimates of avoided emissions.

The climate portfolio also includes a DepEd learning visit, community environmental facilitation and planting activities. Their contributions differ: courseware concerns learning resources, professional exchange concerns dissemination, GREEN concerns community organizing capability, and planting concerns reported ecosystem activity. The report explains those pathways while retaining their actual stage and evidence, rather than treating all sustainability activity as a direct climate-adaptation outcome.

Table 13 Documented 2025 Accomplishments

Initiative or record	2025 date or account	Partner or unit	Documented output or stage	Source article
ATECCE Phase 2 workshop and MOU	15–17 September	CCCDO; CTU; Capitol; Okayama; Miyagi University of Education	Three-day collaboration on climate-action content, pedagogy and assessment	1065
Teacher-education research	15 September opening sequence	College faculty and partners	Research presentation on integrating climate education in teacher preparation	1066
Climate projects selected for support	18 September account	Okayama and Miyagi universities; College teams	Two named projects selected; grant amounts and receipt not published	1071
Courseware demonstration	15–17 September	TIDMAC and workshop participants	Web and mobile navigation demonstrated; not universal partner adoption	1074
PAFTE research dissemination	9 October	CCCDO; Capitol University	Source reports 92% engagement and 28% literacy increase; methods not fully available	1160
DepEd learning visit	9 October	Officials representing 12 regions	Climate microcredential session and hands-on courseware demonstration	1163

Initiative or record	2025 date or account	Partner or unit	Documented output or stage	Source article
Community and ecosystem action	March–December	WWF; CLENRO; CLIMBS; KUSGAN and others	GREEN facilitation; 300 mangrove seedlings; December tree-growing activity	1149, 1050, 1095, 1303

Sources College article 1065 | College article 1066 | College article 1071 | College article 1074 | College article 1160 | College article 1163 | College article 1149 | College article 1050 | College article 1095 | College article 1303

Continuity and Development

The 2024 ATECCE forum explicitly anticipated Phase II participation, providing a stronger continuity link than a generic comparison of environmental events. The 2025 workshop adds coordination and a visible technical contribution by the College. Research on local vulnerability supplies related context. Multiple workshop articles describe different functions within one collaborative sequence.

Detailed Evidence and Knowledge Contribution

Climate education projects selected for support

The September 18 account identifies two projects presented during ATECCE and selected for co-funding and support by Okayama University and Miyagi University of Education. The first is The Tricycle Approach to Climate Change Education: Students' Learning and Engagement through Contextualized Lesson Plans. Joel Potane leads with Capitol University co-lead Amor de Torres.

The second is Eco Librium and Climate Resilience Courseware as Game-Based Pedagogy for Climate Change Education: A Bicycle Model Approach among Grade 10 Learners in Mindanao. Jestoni P. Babia leads, with Donna Grace Cotejo as assistant lead. The projects address iterative lesson planning and interactive climate learning, respectively.

Selection for support is the verified funding stage. The two project descriptions are counted within one announcement record.

Research or activity source

Climate resilience courseware at PAFTE

The October 16 College account reports a presentation on October 9 at the PAFTE convention at Saint Louis University, Baguio City. The research concerns the Design and Utilization of Climate and Disaster Resilience Courseware and learning videos to advance the SDGs by strengthening functional literacy and Disaster Readiness in Vulnerable Communities, developed alongside Capitol University.

The article identifies the ADDIE model and Mayer's Multimedia Learning Theory and reports testing during January–June 2025. It gives 92% engagement and a 28% increase in climate literacy. These are

source-reported findings; the article does not provide the sample size, measurement instrument, calculation method, or uncertainty needed for independent evaluation.

The record supports conference dissemination and a public account of testing.

Research or activity source

DepEd learning visit and climate micro credential

On October 9, 2025, the College hosted DepEd officials representing 12 regions. The October 16 article describes a climate-change micro credential session led by Eldin Camposo, Sittie Aliah Paki, and Eugene Ranoco, together with a hands-on demonstration of TIDMAC courseware.

The program also included the Bayanihan Outreach Program and a visit to the Fresco Greenovation Laboratory. These are components of the reported learning visit. Twelve regions describe representation, not the number of visitors, schools adopting the materials, or micro credential completers.

This record demonstrates dissemination to education officials and an opportunity to examine the learning platform. It does not provide certification results or confirm that the program was delivered across all represented regions. Although the learning visit and the PAFTE account share an October 9 activity date, they describe different engagements and are not combined into a single event.

Research or activity source

Interpretation of Results

The two support-selected projects are research-development milestones, not two completed impact evaluations or confirmed cash receipts. The courseware percentages are retained as College-reported findings with missing methodological details; the 28% is not relabeled a percentage-point gain. Twelve represented regions are not twelve deployments or micro credential cohorts. The mangrove planting contributes an ecosystem output, but no survival period or carbon accounting permits conversion into an emissions result.

Environmental and climate-related measures must also remain distinct from general hazard preparedness. Earthquake drills demonstrate preparedness for seismic hazards; they are not evidence that earthquakes are climate-driven. Their disaster-readiness relevance is retained in SDG 11 without being converted into a climate-risk reduction figure.

The 2025–2026 direction is to document the complete educational pathway: validated materials, learner reach, instruments, baseline and follow-up results, and partner use. Support announcements should be linked to executed funding and deliverables. Environmental activity needs site-based monitoring.

Selected Activity and Research Documentation

Figure 30. Official photograph accompanying the September ATECCE partnership signing account.

Documentation source

Figure 31. Official photograph accompanying the courseware demonstration account.

Documentation source

SDG 14 Life Below Water

The clearest 2025 Life Below Water accomplishments are the February coastal cleanup in Agusan and Consolacion, the March mangrove activity in Gitagum and the April Earth Day coastal cleanup in Agusan. These records establish completed participation in coastal stewardship and selected reported outputs. Supporting environmental education with WWF-Philippines and CLENRO connects marine-pollution prevention with land-based waste practices and community organization.

Direct and supporting contributions remain distinct. Shoreline litter removal and coastal planting have a direct habitat setting. GREEN facilitation and plastic-use education support pollution-prevention knowledge, but their downstream marine effects are unmeasured. External pollution-related abstracts in the Higalaay volume add a publisher contribution.

Table 14 Documented 2025 Accomplishments

Initiative or record	2025 date or account	Partner or unit	Documented output or stage	Source article
Baybayani coastal cleanup	28 February	College personnel; local residents; EOO	30 sacks collected across three coastal areas	1150
Gitagum mangrove planting	15 March	CLIMBS; KUSGAN; CCCDO	300 seedlings planted; 60 joint volunteers	1149
Earth Day coastal cleanup	22 April	CLIMBS Cares; Plastik Republic; DENR X; local partners	One Agusan activity corroborated by two articles; no waste total	886, 1148
WWF partnership and GREEN	April–June accounts; 18 June ceremony	WWF-Philippines; CLENRO; community actors	Training and collaboration supporting plastic-pollution prevention	897, 1050, 1053, 1095
Plastic-use awareness	24 October	NSTP; CLENRO; College	REAL TALK cleanup and plastic-reduction discussion	1227
Pollution-related research publishing	2025 volume	External authors; CCCDO publisher	Three selected abstracts on reuse, packaging and plastic treatment	Volume

Sources College article 1150 | College article 1149 | College article 886 | College article 1148 | College article 897 | College article 1050 | College article 1053 | College article 1095 | College article 1227

Higalaay 2025 abstract volume

Continuity and Development

The Bonbon record retained from 2024 is an announcement, while the 2025 Gitagum source reports an activity and output. The sites differ and do not provide a common restoration baseline. The 2024 Higalaay festival's external oil-spill study and the 2025 volume show continuity in dissemination of pollution-related research. The Gusa cleanup belongs to 2023 and is historical context rather than an additional current-year event.

Detailed Evidence and Knowledge Contribution

February coastal cleanup in Agusan and Consolacion

On February 28, 2025, the College conducted Baybayani 2025: Klarex nga Kalimpyo in Barangay Agusan and Barangay Consolacion. Article 1150 reports that volunteers visited three coastal areas and collected 30 sacks of garbage. College faculty and staff participated with local residents.

The reported sack count is a collection output. The three coastal areas are locations visited, not three independent projects. The SDG 14 connection is direct coastal litter removal and community participation in shoreline stewardship. The source does not publish material composition, recycling or disposal destinations, before-and-after litter surveys, or seawater tests. The activity therefore demonstrates participation and reported collection, while ecological recovery remains unmeasured.

Research or activity source

Mangrove planting in Gitagum

Article 1149 reports Baybayani 2.0 at Barangay Pangayawan, Gitagum, Misamis Oriental on March 15, 2025. With CLIMBS Life and General Insurance Cooperative and KUSGAN Volunteers, the activity brought together 60 volunteers from CCCDO and CLIMBS and planted 300 mangrove seedlings.

The 60 volunteers describe the collaborating group; they are not a count of college participants alone. The 300 seedlings are a reported planting output. The source does not supply the number surviving, planting density, restored area, species inventory, or a monitoring period.

The direct SDG 14 relationship is work in a coastal mangrove habitat.

Research or activity source

Published research on plastic prevention

MSU–Iligan Institute of Technology authors propose reusable trays and automated return and washing. The supporting marine link is potential plastic-waste prevention, not demonstrated reduction of ocean litter.

Research or activity source

Published research on plastic treatment

Cagayan de Oro National High School authors describe PyroPure, a solar-assisted pyrolysis concept addressing plastic pollution. The abstract does not establish certified emissions, safe deployment, or verified benefits to marine ecosystems.

Research dissemination makes ideas available for discussion and further assessment. A publication venue does not transfer authorship, ownership, or operating responsibility to its host institution. The report consequently distinguishes the College's publisher role from the research teams' work and any later implementation.

The relevance of a pollution-prevention concept depends on its actual mechanism and evidence. Treatment research similarly requires technical and environmental evaluation before operational benefits can be claimed.

Research or activity source

The mangrove count records planting, not surviving trees or restored hectares. Photographs and partner names establish context and documentation rather than water chemistry, fisheries recovery or biodiversity change. This narrower interpretation preserves the strongest evidence.

The 2025–2026 priority is a site-based coastal monitoring record linking dates, locations, species, numbers planted, maintenance and survival. Cleanup activities should record measured waste, composition and final treatment or disposal. Supporting education can be tracked through action plans and partner follow-up. Marine ecological outcomes require suitable surveys or testing conducted within a defined scope.

SDG 15 Life on Land

CCCDO's 2025 Life on Land evidence combines bamboo growing, terrestrial tree-planting engagement, mangrove activity, environmental learning and biodiversity-related research dissemination. The direct records identify dates, places and collaborating organizations. Their strength lies in traceable participation and selected outputs, while follow-up ecological condition remains largely unmeasured.

The clearest cross-year theme is bamboo: a 2024 exploratory hub discussion in Mambuaya is followed by College participation in the July 2025 Arbor Day bamboo-growing activity in Pagatpat. These are related interests but different sites and functions. Keeping those stages visible provides a credible account of continuity.

Table 15 Documented 2025 Accomplishments

Initiative or record	2025 date or account	Partner or unit	Documented output or stage	Source article
Arbor Day bamboo growing	4 July	CLENRO; College; Pagatpat stakeholders	Participation at Sitio Pamalihi; seedling count and area unreported	1140
Baybayani 4 tree growing	6 December	EOO; CIVIC; Andam Higala; KUSGAN; CLENRO	Orientation, planting and cleanup in Macasandig	1303
Separate December planting	19 December in source narrative	CLENRO; College student volunteers	Macasandig Rio Boulevard activity; no tree total or survival figure	1310
Coastal wetland planting	15 March	CLIMBS; KUSGAN; College	300 mangrove seedlings and 60 joint volunteers; habitat kept distinct	1149
Environmental learning	April–October accounts	WWF; CLENRO; NSTP; community partners	GREEN facilitation and REAL TALK plastic-use education	897, 1050, 1095, 1227
Ecological research dissemination	2025 Higalaay volume	External researchers; College publisher	Four selected abstracts on biodiversity communication, bats, forests and soil	Volume

Higalaay 2025 abstract volume

Detailed Evidence and Knowledge Contribution

Arbor Day bamboo growing at Pagatpat

On July 4, 2025, the College joined CLENRO's Bamboo Tree Growing Activity in Sitio Pamalihi, Barangay Pagatpat, Cagayan de Oro. The July 15 account identifies the event as part of City Arbor Day and explicitly relates it to SDG 15 and climate action.

The record establishes College participation in a land-related activity. It does not provide a seedling count, species or variety inventory, planted area, survival period, or measured change in erosion or biodiversity. The article's general discussion of bamboo's environmental functions is not treated as a site-specific measurement.

This is a relevant continuation of the earlier bamboo interest, with a distinct location and function. The report therefore identifies actual planting engagement in 2025 while retaining the 2024 hub and qualification plans at their documented stage.

Research or activity source

Baybayani tree growing in Macasandig

On December 6, 2025, the Extension and Outreach Office and CIVIC conducted Baybayani 4.0 in Barangay Macasandig with Andam Higala Inc. Article 1303 identifies KUSGAN Volunteers and CLENRO support and describes environmental orientation followed by planting and cleanup involving youth volunteers and College students.

The activity joins environmental learning with practical participation. Its SDG 15 relevance concerns engagement in terrestrial stewardship. The record does not supply a verified tree total, species list, planted area, survival count, or monitoring results.

Research or activity source

Published biodiversity communication and wildlife research

A University of the Philippines Mindanao researcher examines 29 biodiversity videos posted in 2023–2024.

Research or activity source

Published forest and soil research

USTP researchers examine diversity and estimate carbon stocks at Cugman-Catanico Forest Reserve.

Research or activity source

Interpretation of Results

. The two December records establish two dated engagements, not necessarily two restored forests or distinct participant groups. External field observations of 76 bats across eight species belong to the

authors' study site. Similarly, forest carbon estimates in an externally authored abstract do not establish College-managed stocks, offsets or credits.

For the 2025–2026 follow-through, land-related projects need clear site boundaries, species records, planting and maintenance responsibilities, survival checks and habitat observations. Bamboo-sector plans should be tracked through agreement, qualification approval and actual delivery if they advance.

SDG 16 Peace Justice and Strong Institutions

The 2025 SDG 16 record shows human-rights education operating through a continuing institutional center, personnel training, child-focused public-service assessment, student representation, policy consultation and community inclusion. A College-authored COLEGA article adds an empirical scholarly contribution. These records support an account of institutional activity and capability rather than a claimed decline in violence or misconduct.

The strongest evidence chain is the CHR relationship: a December 2024 agreement is followed by a February 2025 workshop and a September commendation for the Center for Human Rights Education. Each stage answers a different question—formal cooperation, delivery and external acknowledgment. Student government, policy consultation and local leadership-course preparation add further channels for participation, but their actual influence requires decisions and follow-through to be traceable.

Table 16 Documented 2025 Accomplishments

Initiative or record	2025 date or account	Partner or unit	Documented output or stage	Source article
Human-rights personnel workshop	13–14 February	CHRE; CHR Region 10	30 participants; rights, GAD, harassment and COLEGA learning	778
Child-friendly barangay validation	3–7 February; March recognition	CHRE; city agencies; assessment partners	College validator role and subsequent recognition	1011, 781
CHR commendation	17 September	CHR; four recognized HEIs	Recognition of the College center, not a new service-outcome measure	1075
Student representation and policy	23 September; 19–20 March	CSG; CHED; College representatives	Regular meeting and participation in national student-affairs policy discussion	1088, 914
Local governance preparation	23 July	DILG; city GAD Office; College	Executive leadership-course planning; delivery not established	1108
Peace and inclusion activities	June; October	Andam Higala; CSWD; College of Education; partners	TalenTrail for 65 youth; UN celebration; RISE for 25 entrepreneurs	894, 1187, 1249
COLEGA publication	2025 journal issue	Potane; Loquillano; Candilas	One College-authored study; 273 implementers and 15 interview participants in research scope	951

Sources College article 778 | College article 1011 | College article 781 | College article 1075 | College article 1088 | College article 914 | College article 1108 | College article 894 | College article 1187 | College article 1249 | College article 951

Continuity and Development

The CHR sequence demonstrates a relationship moving beyond signing into an activity with a reported personnel audience. The CSG's 2024 oath-taking and 2025 regular meeting similarly establish continuity of an organization, not an increase in student influence. National policy participation remains consultation until approval and institutional application are documented.

Detailed Evidence and Knowledge Contribution

Highlighted College research publication for SDG 16

Potane, Loquillano, and Candilas authored a study of the Colega Teaching Manual in Cagayan de Oro City, published in Journal of Interdisciplinary Perspectives, Volume 3, Issue 2, pages 99–108, in 2025. The publisher lists all three authors with CCCDO affiliations and DOI 10.69569/jip.2024.0665. This establishes College authorship, separately from the College's role in promoting the article on its website.

The College announcement is dated January 8, 2025. The downloaded paper records acceptance on January 9 and identifies the February 2025 issue; the current publisher page displays February 1 as the publication date. These records support inclusion in the 2025 publication year.

Articles 951 and 1509 concern the same study and DOI. They count as one paper. The research addresses child-rights education in DepEd schools.

| Research or activity source 3

The publisher's abstract describes a sequential mixed-method study involving 273 purposively selected implementers and interviews with 15 participants. It reports favorable assessments of implementation, child-rights advocacy, governance, and school practices. The study therefore contributes implementation evidence and participant accounts, rather than only an institutional statement of intent.

Purposive recruitment concentrates on people with relevant implementation experience. This helps explain how a program operates, but it does not make respondents representative of every teacher, child, or school. Interview accounts can explain mechanisms and difficulties that a numerical score misses.

A research conclusion about change also needs the observation period to be explicit. Publishing a study in 2025 does not mean its intervention, survey, and historical comparison all occurred in 2025. The report separates the research output year from the years of the evidence analyzed. This permits the paper to strengthen the 2025 publication record without attributing its earlier results to the February personnel workshop.

Research or activity source 1 | Research or activity source 2

Central Student Government

The CSG met on September 23, 2025. Article 1088 identifies the meeting and its stated commitments to student service, integrity, transparency, and accountability.

The record supports continuity of a representative organization after the November 2024 oath-taking. It does not publish attendance, quorum, minutes, resolutions, budgets, or responses to student concerns. A stated commitment to accountability is relevant institutional intent, while demonstrated accountability would require decisions and their follow-through to be traceable. No claim of increased student influence is calculated from this meeting alone.

Mark Raymond Tan participated in the March 19–20, 2025 CHED workshop on student-affairs policies, facilitated a working-group discussion, and presented its output. Article 914 describes revision work, followed by intended review and approval. This supports College participation in policy consultation; it does not establish that a revised national policy was already approved or implemented at CCCDO. The SDG 16 connection is the College's contribution to deliberation on student welfare and institutional responsiveness.

Research or activity source 1 | Research or activity source 2

Interpretation of Results

The COLEGA article's DOI contains 2024, but its identified issue and publisher date place the publication in 2025. Its historical bullying comparisons concern earlier school years and DepEd settings. TalenTrail and RISE involve different groups; their 65 and 25 participants are not combined as unique people reintegrated or beneficiaries of a common peace intervention. Their inclusion value is retained without attributing personal histories or conflict outcomes.

The 2025–2026 direction is to connect institutional commitments with implementation records: meeting resolutions, response to student concerns, approved rights procedures, aggregate grievance handling and follow-up training. Research should retain observation periods and methodological scope. Governance-course preparation needs completed modules and delivery evidence before trained-official totals are reported. Partner recognition should corroborate, rather than replace, service and accountability records.

Documentation source

SDG 17 Partnerships for the Goals

Partnership is the means through which many of CCCDO's 2025 education, research and community activities became possible. The evidence demonstrates several functions: formal agreements, joint delivery, research exchange, technical sharing, resource support and scholarly publication. The strongest account therefore asks what relationships enabled, rather than treating every named organization or signing photograph as an equivalent new partnership.

Several relationships have traceable progression. PNVSCA discussion in 2024 is followed by a signed 2025 agreement; the CHR framework is followed by personnel training; and ATECCE engagement is followed by a Philippine workshop, demonstration and research-support selection. Other collaborations deliver community training, technical preparation or reciprocal journal exchange. Their stages differ, and the overall report retains those differences.

Table 17 Documented 2025 Accomplishments

Initiative or record	2025 date or account	Partner or unit	Documented output or stage	Source article
PNVSCA volunteerism agreement	6 August	PNVSCA; College	Formalization following 2024 discussion; future delivery remains separately reportable	1028
ATECCE climate collaboration	15–17 September	CTU; Capitol; Okayama; Miyagi; CCCDO	MOU, workshop, courseware demonstration and support-selection milestones	1065, 1074, 1071
ALS agreement	18 July	DepEd CDO; College	One agreement covering bridging, career mapping and teacher research mentoring	1114
Research convening	15 August	College; local-college and international participants	96 presenters and 33 walk-ins; consortium ceremony in the same event	1117
Reciprocal journal exchange	13 October account	BukSU; CMU; Lourdes; Tangub City; USTP–Jasaan	Five named exchange participants; not an annual partner total	1094
WWF GREEN cooperation	April–June delivery; 18 June signing	WWF; CLENRO; community and waste actors	Repeated facilitation across CDO, Siargao, Caloocan and Quezon City	897, 1050, 1053, 1095
Skills, work and community partnerships	2025 records	PSFI; PESO; DOLE; CHR; CLIMBS; others	Resource support, agreement pathways and joint activity outputs	1013, 912, 778, 1149

Sources College article 1028 | College article 1065 | College article 1074 | College article 1071 | College article 1114 | College article 1117 | College article 1094 | College article 897 | College article 1050 | College article 1053 | College article 1095 | College article 1013 | College article 912 | College article 778 | College article 1149

Continuity and Development

Formalization is a meaningful milestone where the baseline was exploratory, but it should be followed by evidence of responsibilities and delivery. Repeated GREEN work shows a facilitation role across locations; some delivery precedes the June ceremony. The consortium signing within the research conference supports regional network development, but its legal identity is not assumed to be identical to the earlier RICEFIELD proposal. The international conference and second Higalaay festival represent recurring convening in a broader format, without a matched attendance growth rate.

Detailed Evidence and Knowledge Contribution

Highlighted publication on community based higher education

Ray Butch Mahinay, Pedro Gamba, Candice May Gamayon, and Psyche Cambo authored Community-Based Higher Education Initiatives and SDG 4: Meta-Analysis and Lessons for a Local City College. The publisher records January 16, 2025 in IJFMR, Volume 7, Issue 1, with DOI 10.36948/ijfmr.2025.v07i01.35041. The College announcement is dated January 17.

The paper reviews 35 studies published during 2000–2024 and discusses community participation, resource access, and institutional collaboration. Its relevance to SDG 17 is the examination of partnership as a means of educational and community engagement. The publication year is 2025, while the reviewed literature belongs to earlier years.

This is College-authored scholarship, distinct from the external research disseminated through College-hosted venues. The thirty-five studies are the authors' review corpus.

Research or activity source 1 | Research or activity source 2 | Research or activity source 3

Highlighted publication through cross institution authorship

The October 13, 2025 College announcement identifies Child-friendly Learning Spaces in the Alternative Learning System: Focus on Northern Mindanao, Philippines, in Southeastern Philippines Journal of Research and Development, Volume 30, Number 2, 2025. It names Ray Butch Mahinay with Edralin Manla of Xavier University, Nancy Ramores of Philippine Normal University, and Amparo Dinagsao of Heritage University, USA. DOI 10.53899/spjrd.v30i2.1179 identifies the article.

This output adds a different kind of partnership evidence: a named scholarly product with authors affiliated across institutions and countries. Its direct subject is ALS learning environments. Its SDG 17 relevance is the documented collaboration in producing knowledge, rather than an assumption that its primary topic is partnership effectiveness.

Co-authorship establishes a shared output. The report retains those distinctions and makes no independent claim about database indexing. The College announcement and DOI provide the publication trail.

Higalaay Multidisciplinary Research Abstract, Volume 2, Number 1, carries a 2025 publication year and contains work by contributors from different institutions. The College's publishing role is distinct from authorship of every included abstract. The volume is treated as one dissemination resource in the evidence register, rather than counting all contributions as College-authored papers.

Research or activity source 1 | Research or activity source 2

Reciprocal journal exchange

The October 13, 2025 account describes distribution of the College's Higalaay volume and receipt of journals from partner institutions. Article 1094 names Bukidnon State University, Central Mindanao University, Lourdes College, Tangub City Global College, and USTP–Jasaan. These are five named exchange participants in that account, not the annual size of the College's research network.

Reciprocity gives this evidence a different character from one-way promotion: the College both supplies and receives scholarly resources. This establishes a shared-resource practice. It does not establish readership, citations, or joint research arising from the exchanged materials. The exact turnover day is not supplied; October 13 is the account date.

The June 18, 2025 ceremonial agreement signing with WWF-Philippines took place at City Hall and concerned continued GREEN Learning Series delivery under No Plastics in Nature. Article 1053 identifies the College and WWF roles in leadership learning for community and waste-management actors.

Research or activity source

SPARK exchange with Opol Community College

CCCDO hosted OCC on September 5, 2025 through SPARK at the Business Resource Center. Article 880 describes three sessions on institutional applications and internationalization, research and innovation, and extension, followed by an open forum. The sessions establish exchange of institutional practice.

This is a capacity-sharing role for CCCDO. A session count records the structure of the visit; it does not measure practices adopted by OCC. Evidence of later adaptation, implementation, or joint work would establish whether exchange translated into institutional change.

The College's April 14–15, 2025 IPIT visit to CSU covered innovation systems, facilities, intellectual property, and technology transfer. Article 899 reports fifteen College faculty and staff participating and describes future work on an office, policy development, and commercialization.

Interpretation of Results

The SDG 17 source report organizes 21 selected documentation units by function. Those units are not 21 independent projects or the College's annual partner census. ATECCE articles describe related

functions, the three ALS program names belong to one agreement, and the journal exchange names five participants in that activity alone. Conference presenters are not journal-publication counts. The clearest examples of partnership value are tangible contributions: shared delivery, technical access, learning resources, cost assistance and identifiable research outputs.

The 2025–2026 direction is a partnership register that tracks acquisition, agreed responsibilities, resources, delivery and retention under a common identifier. Each collaboration should link its agreement to work plans and outputs, while reciprocal benefits and stakeholder influence are documented. Financial commitments, approved funding and actual receipt should be kept separate. This would make SDG 17 a stronger enabling account for outcomes reported under the other goals.

Selected Activity and Research Documentation

Figure 38. Official photograph accompanying the September 15 ATECCE MOU account.

Documentation source

Figure 39. Official second photograph accompanying the July 18 ALS agreement account.

Documentation source

Integrated Assessment Across the Goals

The goal chapters describe different contributions to one institutional purpose: making knowledge and learning useful to people and communities. The integrated assessment examines relationships across goals without adding unlike outputs or double-counting the same activity. Its strongest conclusions concern connected functions, documented delivery and development of institutional capability.

Access Education and Livelihood Pathways

The clearest connection across SDGs 1, 4, 8 and 10 is the progression from opportunity to participation and preparation for work. Community information services and evening outreach address awareness and scheduling. ALS initiatives address teacher support, foundational readiness and pathway decisions. SKIL helps meet consumable, allowance and assessment costs. TSTI ceremonies provide a reported completion output. Each stage contributes to an education-centered livelihood pathway while retaining a different population and evidentiary role.

The research portfolio helps explain why these stages matter. Studies on transportation, geography and enrollment persistence show that availability alone does not guarantee participation. Learning-space research adds health, safety and support conditions. The institutional response is most persuasive where actual support can be linked to a cohort's experience. The current sources establish complementary activity rather than a complete tracked pathway for the same learners.

The next evaluative step is therefore connection, not another total of contacts. A stable learner or cohort identifier, appropriate data controls and agreed follow-up periods could show how information, support and training relate to assessment and work. Until then, the overall report describes the pathway without claiming a measured reduction in poverty or an employment rate.

Health Dignity and Inclusive Participation

Health, gender, inequality and rights evidence overlaps in the conditions that allow people to participate safely and with dignity. Mental-health learning prepares student leaders to listen and refer. Workplace gender sensitivity and human-rights education address conduct and institutional awareness. Eba Ka Talaga opens a practical technical-learning opportunity for its stated community audience. Take Pride and Indigenous student participation add visibility and representation.

The contribution is broader than one event category, but the evidence remains specific. Thirty personnel trained in rights do not represent the whole workforce. A student's leadership at a city assembly is not an institutional enrollment statistic. Public recognition of an inclusion initiative does not establish freedom from discrimination across every College setting. These boundaries protect the value of the documented activities by keeping claims proportionate.

For sustained progress, activity delivery should be linked to accessible services, approved procedures, responsive decision-making and aggregate stakeholder experience. Participation counts can help describe reach, while learning and institutional follow-up establish whether the activity changed practice. Research samples and historical comparisons should remain separate from current campus service indicators.

Environmental Learning and Ecosystem Stewardship

The environmental portfolio combines direct activities with the educational capacity to organize action. Baybayani provides coastal cleanup, mangrove planting and tree-growing records. GREEN contributes facilitation with barangay and waste-management actors. REAL TALK links environmental awareness with practical cleanup. The solar shed makes a renewable-energy application visible in a learning space. Climate courseware connects academic and technical expertise with educational use.

These contributions support several goals, but their measures are different. Litter collection does not establish water quality; seedlings planted do not establish tree survival; a solar facility does not establish annual savings without readings; and a demonstration does not establish adoption. A credible integrated account keeps direct outputs visible while reserving ecological and operational outcomes for appropriate measurement.

The 2026 direction is a set of linked but distinct records: site-based planting and survival, measured waste and treatment routes, water and energy use, validated learning instruments, and partner follow-up. Those records would allow the College to move from evidence of action to evidence of sustained environmental contribution without relying on proxy claims.

Research Innovation and the Publication Platform

The research contribution has several levels: inquiry into educational and community issues, development of funded or support-selected projects, conference dissemination, journal publication, technical demonstration and publication of an abstract volume. Their combination demonstrates an active knowledge function. Their separation prevents an award, conference appearance and journal article from being mistaken for several independent studies.

Authorship is central to accurate attribution. Some journal outputs identify College authors or scholars recognized by the College; the Springer chapter retains its publisher-listed affiliation and citation-year nuance. Higalaay contains external contributions whose authorship remains with their institutions. The College's publisher and convening roles are substantive accomplishments, but do not make every prototype or respondent a College project or beneficiary.

Research contributes most strongly to institutional improvement when outputs are linked to decisions and tested applications. IP learning and research-management training can support that transition, while approvals and proposal workshops remain earlier stages. The present record establishes a pipeline and identified products; it does not establish an institution-wide publication-growth rate, patent portfolio or commercial-return series.

Partnership Functions and Institutional Accountability

SDG 17 enables work across the other goals through different partnership functions. PSFI contributes training-cost support; CHR supports personnel learning; WWF provides an environmental-learning collaboration; ATECCE organizes cross-institution climate education; DepEd and TEC relationships support alternative and teacher education; and DOLE provides an agreement pathway for government work experience. These examples are stronger when the partner's role and the output are identified together.

Agreement signing, resource turnover, joint delivery and recognition should be tracked within the same relationship where appropriate. This avoids counting one collaboration several times while still showing its development. The GREEN series demonstrates why chronology matters: some delivery precedes the June ceremony. ATECCE shows why documentary units differ from partnership totals: several articles describe distinct functions within one workshop sequence.

An institutional register should therefore retain the agreement or project identifier, participating parties, responsibilities, period, resources, outputs and follow-up. Reciprocal benefits and community influence should be recorded alongside activities. This would allow future reports to assess whether partnerships remained active and what they achieved, rather than using the number of names or ceremonies as a substitute for effectiveness.

Proposed 2026 Follow Through

The following agenda is proposed from the evidence in this report. The suggested responsible functions follow the roles visible in the 2025 records and should be confirmed through the College's planning process.

Priority	Suggested coordinating functions	Proposed action	Evidence sought
Access and TVET	TSTI; ALS; student support; partners	Link outreach, assistance, assessment, completion and transition by cohort	Verified completion and employment or further-learning follow-up
Health and inclusion	Health and welfare services; GAD; CHRE	Record delivery, appropriate learning measures, referrals and follow-up	Aggregate service results and action on identified needs
Climate education	Research; TIDMAC; academic and partner teams	Link courseware versions, instruments, participants and outcomes	Evaluated learning and documented partner use
Environmental sites	EOO; CIVIC; environmental partners	Keep planting, maintenance, survival and waste-treatment records	Site-based ecological and materials evidence
Energy and water	Facilities; administration; technical partners	Maintain specifications, consumption and generation readings	Measured facility performance within a defined boundary
Research outputs	Research office and author teams	Use work identifiers across proposal, conference, abstract and publication	Accurate output inventory and evidence of use
Partnerships	Linkages; implementing units; partners	Link agreements, contributions, delivery and retention	Active collaboration and reciprocal outputs
Reporting quality	Planning; internationalization; records functions	Reconcile dates, source versions, units and duplicate records	A consistent annual evidence register

Tracking Delivery and Change

The first requirement is a consistent project and activity register. Each initiative should have an identifier, date range, lead and partner roles, intended audience, delivery stage, source documents and units of measurement. A source article may corroborate an initiative, but should not replace the implementation file where that file is needed to establish delivery or results.

The second requirement is a measured follow-up proportionate to the activity. A short awareness event may need an appropriate learning check and documented next steps. A multi-month learning program needs cohort and completion records. A planting site needs survival and maintenance, while a solar installation needs technical and operational readings. The measure should answer the purpose of the activity rather than merely repeat that it occurred.

The third requirement is continuity of definitions. A beneficiary count, an event attendance count and a research sample should have distinct fields. Approximations should remain visible. Cross-goal tags can show relevance without multiplying independent-project totals. Historical and current-year data should not be blended into an annual outcome figure.

The fourth requirement is closure of the evidence chain. Agreements should link to work plans and delivered outputs; approvals should link to funding and implementation where they proceed; and research dissemination should link to publications or applications where those occur. This makes institutional progress reviewable at each stage while allowing unfinished work to remain visible.

Conclusion

The 2025–2026 overall account demonstrates a substantive 2025 sustainability contribution through education, scholarship, community participation and partnership. The strongest evidence is specific: two vocational graduation ceremonies, delivered health and rights learning, women's practical technical access, community environmental action, a solar-powered learning space, research-development milestones, identifiable publications and collaborations with documented functions.

The report also shows that progress is uneven and cannot be reduced to a single success percentage. The matched graduate-output series decreases, while other records document sustained support, new resources or a movement from preparation to delivery. Environmental activity is traceable, but ecological recovery and resource savings are not quantified. Research is communicated and published, while institutional adoption and long-term effects require additional evidence.

Across the goals, the clearest institutional strengths are the ability to connect educational work with community concerns and to mobilize complementary partners. The strongest future improvement is to connect that delivery with consistent follow-up. A coherent evidence system would allow the College to show not only where it participated, but what was delivered, for whom, and what changed over time.

The proposed 2026 direction therefore builds on the documented 2025 work rather than relabeling intentions as accomplishments. Through careful attribution, clear reporting units and measured follow-through, CCCDO can strengthen the relationship between its sustainability commitment, the services it provides and the outcomes it can substantiate.

Appendix A Consolidated Research Register

This selected register distinguishes journal articles, a book chapter with a 2025 online-release record, conference studies and the College's publication platform. It consolidates repeated cross-goal appearances without claiming an exhaustive annual research census. Author affiliations, study periods and dissemination stages remain those identified in the supplied reports.

Selected work	Output stage	Relevant goals	Scope and attribution
Community-Based Higher Education Initiatives and SDG 4: Meta-Analysis and Lessons for a Local City College	Journal article; January 2025	1, 4, 17	35-study literature corpus from 2000–2024; not 35 College projects
Overcoming Geographic and Transportation Barriers for Access and Equity in Alternative Learning System	MJAES publication alert; February 2025	1, 4, 10	Five rural Bukidnon municipalities; research setting rather than service sites
Gender Disparities and Spatial Patterns in Alternative Learning System Enrollment and Completion	MJAES publication alert; January 2025	1, 4, 5, 10	14 divisions; 2017–2021 dataset; two alerts treated as one study
Qualitative Insights on the Implementation of the Alternative Learning System in the Philippines	Journal article; February 2025; March College alert	1, 4, 10	Thematic analysis of implementation; not a 2025 learner-outcome census
Child-friendly Learning Spaces in the Alternative Learning System: Focus on Northern Mindanao, Philippines	Journal article; September 2025; October College alert	3, 4, 10, 17	342 implementers across 14 divisions; mixed methods and cross-institution authorship
The Permeates of Artificial Intelligence AI in Language Education A Thematic Synthesis	Journal publication alert; February 2025	4, 9	Ethics, implementation and educational use; no campus-wide adoption inferred
Teachers' Perceptions of Organizational Justice and Culture: Their Influence on Organizational Commitment	Journal publication alert; March 2025	8	282 public-school teachers; correlational study, not College workforce survey
COLEGA Teaching Manual study by Potane, Loquillano and Candilas	Journal article; 2025 issue	16	273 purposively selected implementers; 15 interview participants; historical school data
Factor Analysis of AI's Impact on Academic Writing: A Study on ChatGPT's Influence on Student Performance and Confidence	Springer chapter; first online February 1, 2025	4, 9	314 EFL participants in Oman; publisher citation/copyright retains 2024

Selected work	Output stage	Relevant goals	Scope and attribution
Mission 626 as a Community Extension-Based Model for Youth Leadership and Sustainable Development	NMSCST conference presentation and recognition	1, 2, 3, 6, 17	Explicit cross-goal framing; first-place Best Paper and third Best Presenter; no journal record established
Academic Resources and Wellbeing as Predictors of Academic Performance: Insights and Future Directions at City College in the Context of SDGs 3, 4, and 10	NOTED conference presentation and recognition	3, 4, 10	Acceptance, program and certificate corroborate one contribution
Self-awareness, Emotional Intelligence, and Personal Growth: A Mediation Analysis Among College Students Aligned with the Sustainable Development Goals on Education and Well-Being	ICMR conference presentation; November	3, 4	Conference status; public account does not supply mediation estimates
Future-ready TVET research by Cambo, Sumili, Cahansa and Madronero	ICMR conference presentation; November	4, 8	Responsive curriculum, industry partnerships and sustainability; no employment-effect estimate
Enhancing Learners' Performance in Plant Care and Propagation Through Bi-Cycle Implementation of Scenario and Computer-Based Simulation Gardening Activities	NMSCST conference presentation and award	4, 5, 10	Separate study from Mission 626; no gender-disaggregated effect established
Climate and disaster resilience courseware research	PAFTE presentation; October	4, 11, 13	Source reports 92% engagement and 28% climate-literacy increase; methodological details absent
Higalaay Multidisciplinary Research Abstract, Volume 2, Number 1	One College-published 2025 abstract volume	Multiple goals	External affiliations retained; abstract proposals are not College installations

Appendix B Cross Goal Activity Register

The register below identifies important shared activities and sequences. Goal links explain relevance; they do not multiply independent projects, agreements or beneficiary groups. The rows are selected examples rather than a complete institutional activity census.

Shared activity or sequence	Goals	Consolidated unit	Counting rule
TSTI 2025 ceremony series	1, 4, 8	Two ceremonies; 765 reported completions	Same output series across goals; not three graduate populations
SKIL cooperation	1, 4, 8, 17	Continuing partnership, support and cohort records	38 supported since 2024 and 24 later EIM scholars are not additive
ALS orientation	1, 4, 5, 10	One April 25 online activity	Alternate articles corroborate the same event
ALS mentoring, bridging and career mapping	4, 10, 17	Three program names within one collaboration	May consultation and July agreement; pilot completion not established
Baybayani February cleanup	6, 14	One February 28 activity	30 sacks and three coastal areas are retained once
Baybayani March mangroves	6, 13, 14, 15, 17	One March 15 joint activity	300 seedlings and 60 joint volunteers, not goal-specific duplicates
Baybayani Earth Day cleanup	6, 12, 13, 14	One April 22 activity	Articles 886 and 1148 corroborate one event
Baybayani December activity	11, 12, 13, 15	One December 6 event	Planting, orientation and cleanup are components
December 19 planting	13, 15	Separate dated planting account	Not merged with December 6; totals and site overlap unresolved
GREEN and WWF	11, 12, 13, 14, 15, 17	Related training accounts and one signing milestone	Places, articles, sessions and partnerships are different units
REAL TALK	3, 6, 12, 14, 15	One October 24 multi-topic program	Environmental, safety and health content are components
CHR workshop	5, 10, 16, 17	One February 13–14 workshop for 30 personnel	Duplicate article is corroboration; no summed annual workforce reach
Take Pride	5, 10, 16	One initiative and later recognition	Event and award are separate records of the same project

Shared activity or sequence	Goals	Consolidated unit	Counting rule
RISE Mindanao	8, 9, 16, 17	One October 24–25 bootcamp	25 entrepreneurs; alternate articles do not create another cohort
ATECCE workshop sequence	4, 13, 17	One related September workshop sequence	MOU, demonstration and support selection have distinct stages
RITE 2 mentorship study	4, 17	One named project across approval and tool development	Approved funding is not expenditure or a completed model
Solar study shed	7, 17	One physical project	Turnover and donation ceremony are not two installations
Dugong Bayani	3	One May 9 activity	Articles 890 and 1038 corroborate around 27 bags
Research conference and Higalaay festival	4, 17	One combined August 15 convening account	96 presenters and 33 walk-ins are categories, not journal articles

Appendix C Reconciliation and Date Notes

These notes retain uncertainties that materially affect interpretation. They do not change the original source images or imply that an unresolved date was independently corrected. Where the source reports themselves disagree, the consolidated choice and its basis are stated.

Issue	Source condition	Consolidated treatment	Source trail
Graduation figures	SDG 1 contains both 765 and an older 811 series. SDG 4 and SDG 8 detailed qualification tables agree on 384 plus 381 equals 765.	Use 765 consistently, supported by component sums. Retain 811 as a source-file inconsistency, not an alternative result.	Articles 1054 and 1305; supplied SDG 1, 4 and 8 reports.
Calendar year versus reporting cycle	June and December 2025 are two ceremonies within one calendar year. The dates do not independently establish an academic-year cohort.	Title the overall cycle 2025–2026, but label the graduate sum calendar year 2025.	Supplied SDG 1, 4 and 8 reports.
Planned ALS pilot	The May account plans August 2025–January 2026; the July account records an agreement.	Report preparation and formalization. Do not claim a completed 2026 pilot.	Articles 1043 and 1114.
GREEN Cagayan de Oro	Article 897 header is March 30; body dates are April 22–23, 2025.	Use explicitly stated activity dates with the discrepancy unresolved.	Article 897; SDG 11–17 environmental accounts.
Project LIGTAS	Article 1138 header is June 12; body states July 7–11, 2025.	Retain July body dates for activity classification, with the mismatch disclosed.	Article 1138.
Research proposal writeshop	Article 898 header is March 29; narrative places the event April 28–29, 2025.	Treat April dates as body-stated; no silent correction of webpage.	Article 898; SDG 3 report.
December planting	Article 1310 refers retrospectively to welcoming 2026 but states December 19, 2025 as the activity date.	Classify the activity as 2025. It is separate from December 6 Baybayani.	Article 1310.
Historical water conservation	Displayed water-conservation account is April 23, 2023; inherited guideline extract has unverified approval.	Keep as context; no 2025 savings or new policy approval inferred.	SDG 6 report and inherited guideline discussion.
Gusa coastal cleanup	Official narrative identifies September 21, 2023.	Do not include in 2024 or 2025 activity totals.	Article 836; SDG 14 report.

Issue	Source condition	Consolidated treatment	Source trail
Consolacion cleanup	Article 701 has a 2024 header but a 2023 activity statement in the body.	Retain historical uncertainty; exclude from matched annual comparisons.	Article 701; SDG 15 report.
Springer chapter	First online February 1, 2025; publisher citation/copyright retains 2024.	Describe a 2025 online-release and dissemination record, not an unqualified 2025 citation year.	DOI 10.1007/978-3-031-71649-2_88.
COLEGA journal timing	College alert January 8 precedes acceptance January 9; publisher page and issue identify 2025. DOI contains 2024.	Use 2025 publication year; retain alert and DOI chronology without rewriting it.	Article 951; DOI 10.69569/jip.2024.0665.
NOTED documentation	Acceptance letter, presentation program and recognition certificate have different dates and a planned venue differs from later records.	Treat as one conference contribution. Later program and certificate corroborate venue and recognition.	SDG 3 report; article 1079.
Website and alternative account dates	Some duplicate accounts use differing post dates or publication wording.	Prefer explicit activity dates; use publication date when no exact activity day is provided.	Relevant goal source reports and source links.
Unsupported benchmark percentages	Prior overall text includes energy savings, waste reduction, satisfaction and green-cover claims without matched current evidence.	Do not redate the 15%, 8%, 18%, 20%, 92% or 96% benchmark claims as 2025 outcomes. The unrelated courseware 92% is separately attributed.	Benchmark compared with supplied 2025 goal reports.
Institutional coverage and mandates	Event evidence and references to an annual tree-planting expectation do not establish universal participation or actual planting totals.	Keep event scope; no institution-wide NSTP mandate claim or invented tree count.	Baybayani and environmental source reports.
Courseware results	92% engagement and 28% climate-literacy increase are reported without sample or calculation details in the public account.	Attribute as source-reported findings; do not extrapolate or relabel as percentage points.	Article 1160.
Funding stage	RITE source reports PHP 2 million approved; ATECCE identifies two projects selected for support.	Separate approval, selection, receipt, expenditure and evaluated outputs.	Articles 1044 and 1071.

Appendix D Sources and Documentation Register

The seventeen uploaded goal reports are the direct compilation sources. The earlier overall report supplies the institutional design and narrative benchmark. The source links below retain the public article, publisher and publication trails used in the chapters. Repetition of a link across goals identifies shared relevance rather than another event or publication.
