SDG 17: PARTNERSHIPS FOR THE GOALS PROGRESS REPORT

Sustainable Development Goal 17 (SDG 17), Partnerships for the Goals, emphasizes strengthening the means of implementation and revitalizing global partnerships for sustainable development. It recognizes that achieving the Sustainable Development Goals requires cooperation among governments, educational institutions, research organizations, private-sector entities, civil society, and local communities. Through these partnerships, institutions can share knowledge and expertise, mobilize financial and material resources, strengthen institutional capacities, and develop collaborative solutions to social, economic, educational, and environmental challenges.

For higher education institutions, SDG 17 highlights the importance of establishing and maintaining meaningful partnerships that extend beyond institutional boundaries. These relationships can support joint research, academic exchanges, faculty and student development, technical and vocational training, community extension programs, innovation initiatives, and sustainability projects. By combining institutional expertise with the resources and capabilities of partner organizations, colleges and universities can expand educational opportunities, improve public services, and contribute more effectively to local and global development priorities.

The City College of Cagayan de Oro (CCCDO) contributes to SDG 17 through collaborative initiatives that connect its educational programs, research activities, extension services, and institutional development efforts with the needs of partner organizations and communities. Its partnerships with government agencies, academic institutions, research networks, private organizations, and community stakeholders provide opportunities to share resources, exchange knowledge, develop practical skills, and implement programs that address common development concerns. These collaborations are particularly important in strengthening the relationship between higher education and community development, ensuring that institutional knowledge and capabilities contribute to broader public needs.

This report compares CCCDO's 2024 SDG 17 institutional baseline with the institution's reported partnership-related activities in 2025, drawing on a compiled list of 75 CCCDO articles. The 2024 baseline organizes the institution's contributions into five major areas: strategic and international partnerships, community and local government collaboration, research consortia and academic linkages, training and innovation, and global or regional representation. These categories provide a framework for understanding the institution's initial partnership profile and assessing how its collaborative activities developed in the succeeding year.

The 2025 activities highlight CCCDO’s collaboration with various government agencies, academic institutions, private organizations, and other stakeholders through formal agreements, educational programs, research initiatives, academic exchanges, resource support, and capacity-building activities. These partnerships contributed to implementing

programs that expanded learning opportunities, strengthened research collaboration, supported technical and vocational training, developed institutional capabilities, and promoted environmental sustainability.

The comparison examines the development of CCCDO's partnership portfolio between 2024 and 2025, with particular attention to the scope of collaboration, the participation of external organizations, and the practical contributions of partnerships to education, research, community extension, skills development, and sustainability. It also considers how these collaborative efforts helped connect the institution's academic and institutional resources with broader community and development objectives.

To maintain consistency in the interpretation of the findings, the report distinguishes the distribution figures presented in the 2024 baseline from the selected outputs and outcomes reported for 2025. Since the two sets of sources provide different types of information, their figures are not treated as directly comparable measures of annual growth. Instead, the assessment focuses on identifiable developments in the scope, diversity, and application of partnerships, using specific reported activities and outputs to illustrate CCCDO's continuing contribution to SDG 17.

Executive Assessment

The 2024 institutional baseline portrays CCCDO as a partnership-oriented higher education institution that established connections with regional and international organizations, local government offices, research consortia, innovation initiatives, and global sustainability forums. Its partnership activities reflected an approach that combined institutional cooperation with community engagement, academic development, and participation in broader sustainability initiatives.

The 2024 contribution distribution identified strategic and international partnerships as the largest category, accounting for 30.0% of the reported contributions. Community and local government collaborations followed at 23.3%, while research consortia and academic linkages represented 20.0%. Training and innovation accounted for 16.7%, and global or regional representation comprised the remaining 10.0%. These figures indicate that CCCDO's partnership activities covered several complementary areas, with strategic relationships and community-based collaboration forming substantial parts of the institution's reported engagement.

The baseline further identified three global partnership memoranda of understanding (MOUs), collaboration with eight local offices across 15 barangays, research networks involving 12 higher education institutions, and an Innovation Bootcamp attended by 200 participants. Collectively, these examples demonstrate how partnerships provided channels for institutional cooperation, research collaboration, skills development, and engagement with local communities. They also established a foundation for extending CCCDO's collaborative activities across educational, research, and community development initiatives.

In 2025, the reported activities reflected the continued use and broader application of these collaborative relationships. The institution's partnership-related initiatives involved government

agencies, academic institutions, research networks, private-sector organizations, and community stakeholders. Rather than being limited to formal agreements, these relationships supported concrete programs and activities, including alternative learning initiatives, professional and technical training, research collaboration, academic knowledge exchange, climate-action education, resource mobilization, and institutional capacity development.

One notable area was collaboration in educational access and learning development. CCCDO's three Alternative Learning System (ALS) initiatives with the Department of Education (DepEd) Cagayan de Oro demonstrated how institutional partnerships could support learning opportunities beyond conventional classroom-based education. Such initiatives are important because collaboration between higher education institutions and education authorities can help extend educational services, share teaching resources, and respond to the learning needs of individuals who require alternative pathways to education. The reported DepEd learning visit involving officials from 12 regions also illustrated opportunities for interregional knowledge exchange, allowing institutional practices and experiences to be shared with a broader group of education stakeholders.

Partnerships with government agencies also contributed to capacity development and specialized services. The reported cooperation involving the Department of Health (DOH)–Treatment and Rehabilitation Center reflected collaboration in an area requiring coordination between institutions and public-service providers. Meanwhile, participation in research networks supported academic cooperation and knowledge sharing, while climate-action education agreements connected institutional learning activities with environmental sustainability concerns. These examples demonstrate the value of partnerships in bringing together different forms of expertise to address challenges that cannot be adequately addressed by individual institutions working independently.

Research, innovation, and multistakeholder engagement were also prominent in the 2025 activity summary. The ACES Summit 2025 was reported to have generated 40 project entries, involved 68 partner institutions, and attracted more than 250 participants. These figures illustrate the scale of participation associated with this particular initiative and demonstrate how organized collaborative platforms can bring together institutions, projects, and individuals around shared objectives. Such gatherings can facilitate knowledge exchange, expose participants to different approaches and practices, and create opportunities for future cooperation. The figures, however, describe the reported outputs of the summit and should not be interpreted as a direct measure of the overall performance of CCCDO's entire partnership portfolio.

The institution's involvement in technical and vocational training further illustrated the practical value of external collaboration. Reported support for SKIL technical-vocational training initiatives helped demonstrate how partnerships can connect education and skills development with practical learning opportunities. Similarly, capacity-building activities for extensionists contributed to strengthening the knowledge and competencies of personnel involved in community-oriented programs. These initiatives are significant because effective partnerships depend not only on formal agreements but also on the ability of participating institutions and individuals to implement programs, share expertise, and respond to the needs of their intended beneficiaries.

Resource mobilization also formed part of the institution's reported partnership activities. Donations from external organizations supported campus and training activities, illustrating how contributions of materials and other resources can complement institutional capabilities. Such assistance can help provide the practical support needed to conduct educational activities, improve training opportunities, and sustain collaborative initiatives. These examples highlight the importance of recognizing both formal institutional arrangements and practical forms of assistance when assessing partnership contributions.

Environmental education and climate resilience provided another important area of collaboration. The climate-resilience courseware report recorded 92% learner engagement and a 28% increase in climate-literacy levels during testing conducted from January to June 2025. These reported results suggest that the initiative made a measurable contribution to learner participation and climate-related knowledge within the scope of the activity evaluated. The findings also illustrate how collaboration can support the development and application of educational resources that address environmental challenges. Nevertheless, these results should be understood as specific to the reported courseware initiative rather than generalized to all sustainability programs or partnerships undertaken by CCCDO.

Taken together, the 2025 activities indicate that CCCDO's contribution to SDG 17 involved multiple forms of collaboration, extending from formal agreements and institutional linkages to joint programs, research-related activities, technical training, resource support, and multistakeholder engagement. The examples demonstrate how partnerships helped connect the institution with organizations possessing complementary expertise, resources, and responsibilities. They also show that collaboration served several institutional purposes simultaneously, including expanding learning opportunities, supporting research and innovation, developing professional competencies, strengthening extension activities, and promoting sustainability education.

Compared with the 2024 baseline, the 2025 activity summary provides a wider range of examples illustrating how institutional relationships were applied in practice. The baseline established the distribution of contributions across five partnership categories, while the 2025 reports provide specific examples of activities, participating organizations, and selected outputs. This difference in reporting means that the available figures cannot establish a precise percentage increase in partnerships or overall institutional performance from one year to the next. However, the range of reported activities provides evidence of continued engagement across educational, research, community, and sustainability-related areas.

Overall, the strongest evidence of CCCDO's progress toward SDG 17 in 2025 lies in the diversity of its reported partnerships and the application of these relationships to collaborative programs and institutional activities. The initiatives illustrate how cooperation with government agencies, educational institutions, research networks, private-sector partners, and other stakeholders can support shared objectives and extend the reach of higher education. They also reinforce the importance of maintaining active partnerships, translating agreements into implemented activities, and assessing their contributions through clearly defined outputs and outcomes. These considerations provide a basis for understanding CCCDO's reported partnership activities in 2025 in relation to the five contribution areas established in the 2024 institutional baseline.

Key Findings

- The 2024 baseline organized SDG 17 work into five complementary areas and assigned the largest share to strategic and international partnerships (30.0%).
- Local government collaboration was a major part of the 2024 model, including learning hubs and research caravans across 15 barangays; the 2025 account adds more examples of coordinated education, local governance, and community services.
- Research and knowledge exchange continued across the reporting period through RICEFIELD, NorMinCIEERD, DOST–NorMinCIEERD, journal exchange, research conferences, and collaborative research on stakeholder concerns.
- The 2025 source contains measurable examples of partnership scale: 40 ACES project entries, 68 partner institutions, and more than 250 participants; separate reports also identify 38 young people receiving SKIL training opportunities and a DepEd learning visit involving 12 regions.
- Partnerships in 2025 connected education with sustainability, climate resilience, technical-vocational development, community extension, professional capacity-building, and institutional resources.

Institutional Context and SDG 17

SDG 17 recognizes that sustainable development requires cooperation across institutions and sectors. For CCCDO, partnership activity takes several forms: formal agreements that establish continuing cooperation; joint activities that combine institutional expertise; research and academic networks that enable exchange; private-sector contributions that provide equipment or technical support; and extension programs that connect college knowledge with community priorities.

The 2024 report described strategic international relationships with the Geneva Office for Human Rights Education (GO-HRE), Brigham Young University (BYU), and the ASEAN Learning Cities Network. Locally, the College collaborated with offices of the City Government of Cagayan de Oro on learning hubs and barangay research caravans. Research networks such as RICEFIELD and NorMinCIEERD added an academic and technology-development dimension. The Innovation Bootcamp for Educators and Entrepreneurs and the College's participation in CHED's SDG-responsive convergence activities further demonstrate how partnerships were used for capacity-building.

The 2025 account shows these same partnership mechanisms operating through a broader set of identified programs and external relationships. DepEd collaboration supports alternative learning initiatives and knowledge exchange; government agencies contribute to training and community governance; research networks support collaborative academic work; and private-sector partners provide skills-development support, donations, and training resources. These relationships illustrate SDG 17's role as an enabling goal: partnerships help institutions connect progress across education, decent work, innovation, climate action, and local development.

2024 Baseline: Partnership Structures and Shared Capacity

Strategic and international partnerships

The 2024 report identified strategic and international partnerships as the largest contribution area, at 30.0%. It described MOUs with GO-HRE in Switzerland, BYU in the United States, and the ASEAN Learning Cities Network. These relationships were connected to sustainable education, human-rights advocacy, research mobility, exchange of learning materials, and participation in SDG-themed conferences. The baseline emphasized that international connections expanded CCCDO's institutional visibility while opening channels for knowledge-sharing across geographic and institutional boundaries.

Community collaboration and local government partnerships

Community and local government collaborations represented 23.3% of the 2024 contribution distribution. The report described cooperation with eight local offices and activities across 15 barangays, including the Sustainable Learning Hubs Program and Barangay Research Caravan. These initiatives linked public education and community-based research with local government priorities. The collaboration model positioned the College as a partner in local development rather than solely as a campus-based service provider.

Research consortia and academic linkages

Research consortia and academic linkages accounted for 20.0% of the 2024 distribution. CCCDO's participation in RICEFIELD connected it with policy dialogue, joint publications, and shared research training involving partner local colleges. NorMinCIEERD expanded engagement with regional research and development networks, particularly in technology innovation, renewable energy, and digital literacy for educators. These networks provided a structure for sharing knowledge and connecting academic work to regional priorities.

Training, innovation, and capacity-building

Training, innovation, and capacity-building represented 16.7% of 2024 SDG 17 contributions. The Innovation Bootcamp for Educators and Entrepreneurs brought together 200 participants from academic and business sectors and introduced tools related to entrepreneurial sustainability and green enterprise incubation. CCCDO's involvement in CHED's Regional Convergence for SDG-Responsive Higher Education Institutions also connected institutional activities with the broader work of localizing the United Nations 2030 Agenda.

Global and regional representation

Global and regional representation accounted for 10.0% of the 2024 baseline. CCCDO participated in the Global Sustainable Development Congress in Bangkok and the ASEAN Conference on Extension for Sustainable Development Goals. These forums allowed the institution to exchange practices and represent local higher education perspectives in broader discussions about sustainability, innovation, and governance.

Progress Documented in 2025

Government and public-institution cooperation

The 2025 narrative gives specific examples of partnerships that connected college resources with public programs. Collaboration with DepEd Cagayan de Oro established three Alternative Learning System initiatives—Pagtulay, Paglantaw, and Pagpamalandong—focused on academic bridging, career mapping, and research mentoring for ALS teachers. CCCDO also hosted DepEd officials from 12 regions for a learning visit involving climate education, microcredentials, community outreach, and sustainable agriculture innovation. These activities show cooperation being applied to targeted education initiatives and interregional exchange.

The partnership with the Department of Health's Treatment and Rehabilitation Center in Cagayan de Oro supported vocational training and certification pathways for residents. Cooperation with DILG and gender-and-development partners addressed local leadership development, while the partnership with the Philippine National Volunteer Service Coordinating Agency promoted volunteerism. Across these examples, CCCDO's partnership work connected education and extension functions with public-service priorities.

Research collaboration and knowledge exchange

Research cooperation remained a prominent feature of the 2025 portfolio. The College's reported membership in DOST–NorMinCIEERD linked it with a regional research and development network. CCCDO hosted its first international research conference and second Higalaay Multidisciplinary Research Festival, expanded research connections through a Journal Exchange Program, and participated in the National RITE 2 Project. Collaborative research with the City Economic Enterprises and Business Development Administration also addressed stakeholder concerns involving public-market management, waste conversion, and vendor financial literacy.

The significance of these activities lies in connecting researchers and institutional teams with organizations that bring different knowledge, perspectives, and operational experience. A research conference creates opportunities for academic exchange; a journal exchange supports knowledge access; and collaborative research provides a way to examine practical challenges that extend beyond a single department or institution.

Climate education and sustainability cooperation

In 2025, CCCDO led an MOU signing with international partners focused on climate-action education and developed climate-resilience courseware presented at the PAFTE National Conference. The courseware article reported 92% learner engagement and a 28% increase in climate-literacy levels during testing from January to June 2025. The DepEd learning visit also connected climate education with interregional knowledge exchange and community partnerships. These examples link collaboration with a specific sustainability topic and include reported learning indicators for one initiative.

The engagement figures should be interpreted as results reported for the climate-resilience courseware initiative, not as institution-wide measures of student engagement or climate literacy. Even with that boundary, the example demonstrates how partnership-based

academic work can result in a defined educational product and reported learning results, giving the collaboration a clearer connection between activity and output.

Skills development and employment pathways

The College's partnerships also contributed to skills-development opportunities. CCCDO and Pilipinas Shell Foundation, Inc. continued the SKIL program, with the source reporting training opportunities for 38 young people. Support included industry exposure, financial assistance, national-certification assistance, and employment assistance. CCCDO also continued technical-vocational collaboration involving the City Public Employment Service Office and PSFI, received equipment donations from CLIMBS and PSFI, and partnered with DOLE for a government internship initiative.

These activities demonstrate how partnership arrangements can combine educational delivery with resources and services that a college cannot supply alone. Equipment donations can support training practice; industry exposure connects trainees with work settings; certification assistance links training to recognized qualifications; and internship arrangements provide a bridge between education and public-sector experience. The sources report the training opportunities and partnership activities, but do not state the total number of SKIL participants who ultimately gained employment.

Community extension and local development

CCCDO's community-extension work in 2025 included grant-writing and business-proposal training for cluster partnership coordinators, capacity-development training for extensionists, consultations about extension projects, and involvement in professional extension networks. Youth leadership engagement through YSEALI AMPLIFY 9.0 and collaboration among colleges to localize NSTP implementation also connected institutional learning with community service. Benchmarking and extension-evaluation activities provided opportunities to compare practices and share institutional experience.

Together, the activities show that partnership capacity involves more than signing agreements. It also requires staff who can plan projects, develop proposals, coordinate partner roles, and engage community stakeholders. The training and benchmarking activities supplied a support layer for collaborative work by strengthening the people and systems responsible for implementing programs.

Institutional capacity and shared resources

Several 2025 developments supported the institutional environment in which partnerships can operate. CCCDO reported compliance with the 2025 TESDA program-registration audit and received CHED recognition connected to global rankings. The College also undertook faculty empowerment training, strengthened library resources through book and equipment donations, and received accreditation as a continuing professional development provider. The solar-powered study shed donated by Mindanao Goes Solar further illustrates resource-sharing between an external partner and the institution.

These activities are not all direct partnership outcomes under SDG 17, but they demonstrate the range of ways cooperation can support institutional operations. Recognized programs, professional development, learning resources, and donated facilities provide infrastructure

and capacity that can help CCCDO sustain joint programs, support students, and connect external resources to its academic mission.

Figures and Comparative Analysis

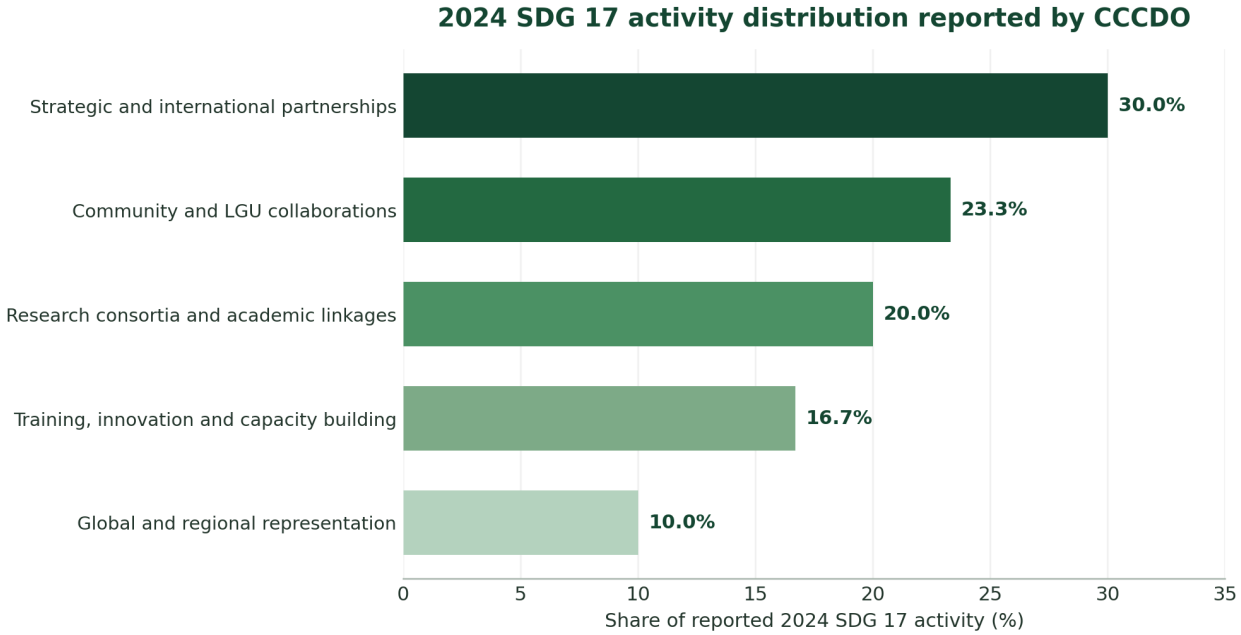

Figure 1. Percentage distribution of 2024 SDG 17 contribution areas, reproduced from the institutional baseline.

Interpretation: Strategic and international partnerships formed the largest share of the 2024 distribution at 30.0%, followed by community and local government collaboration at 23.3% and research consortia or academic linkages at 20.0%. Training and innovation represented 16.7%, while global and regional representation accounted for 10.0%. The distribution portrays a model in which international arrangements and local implementation were both important: global connections opened routes for knowledge exchange, while local collaboration brought those relationships closer to community priorities. These percentages describe the categorization in the 2024 baseline and should not be interpreted as direct measures of the quality or lasting impact of each partnership.

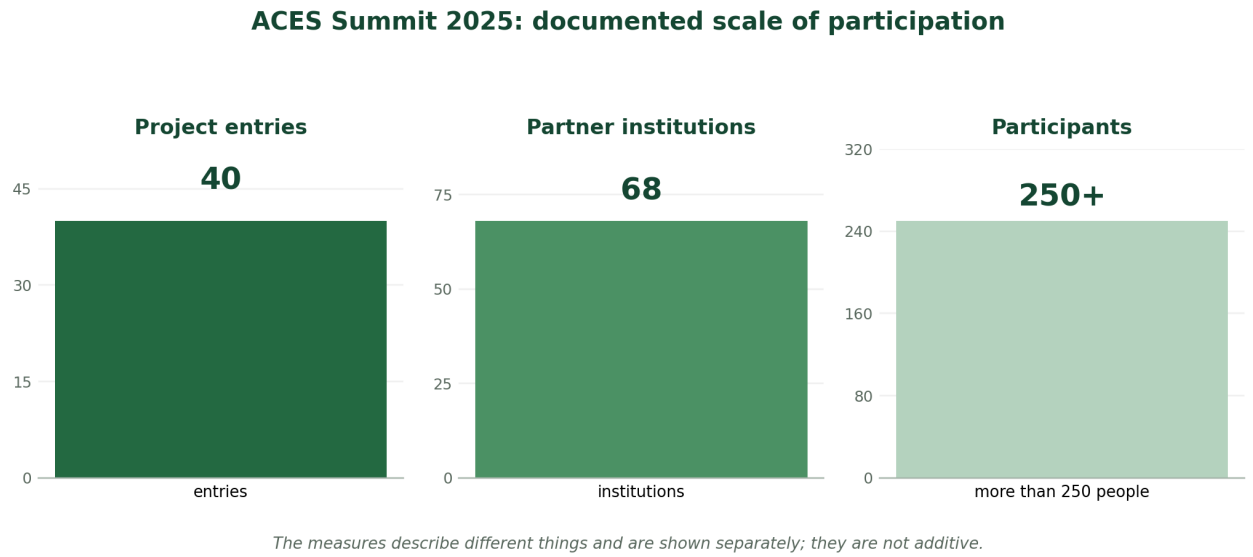

Figure 2. Selected ACES Summit 2025 metrics as reported in the 2025 institutional narrative.

Interpretation: The ACES Summit provides a concrete example of the scale of CCCDO's partnership convening in 2025. The source reports 40 project entries, 68 partner institutions, and more than 250 participants, with CHED Region X endorsing the event as a platform for sustainable-development and extension innovation. These values describe different dimensions of the same event: project entries indicate the breadth of presented work; partner institutions indicate organizational reach; and participants indicate attendance. They should be read separately, not added into one total. Together, they show an event structured to bring multiple institutions and sustainability projects into a shared forum.

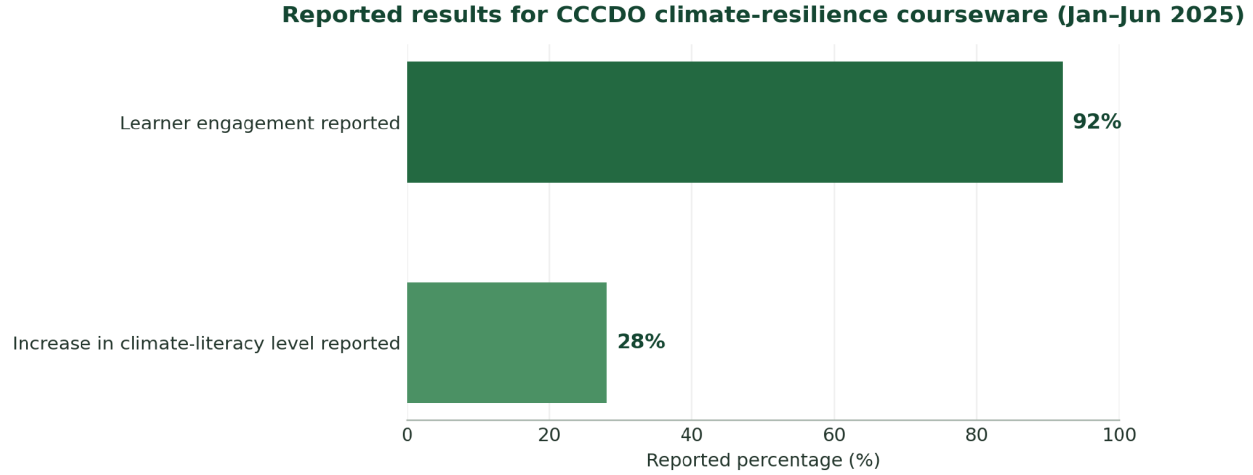

Figure 3. Reported engagement and climate-literacy results for the climate-resilience courseware initiative, January–June 2025.

Interpretation: The climate-resilience courseware article reported 92% learner engagement and a 28% increase in climate-literacy levels during its testing period. The two measures point to different aspects of the initiative: engagement describes learner participation or interaction as defined in the reported evaluation, while the literacy increase describes a reported change in knowledge level. These figures provide more direct evidence of an educational result than a

partnership announcement alone. They apply to the specific courseware initiative and should not be generalized to all CCCDO courses or all partnerships.

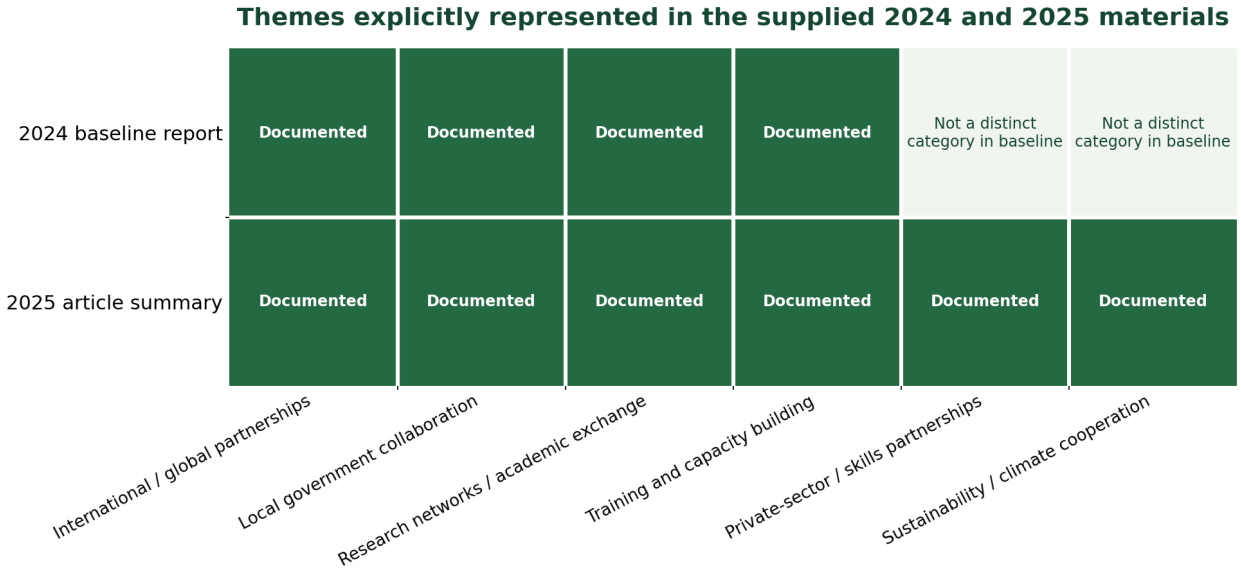

Figure 4. Presence of selected partnership themes in the 2024 baseline and the 2025 article summary.

Interpretation: The matrix shows that international relationships, local government collaboration, research exchange, and capacity-building appear in both reporting periods. The 2025 narrative makes private-sector skills partnerships and sustainability or climate cooperation more explicit through examples involving PSFI, PESO, CLIMBS, DOLE, climate-action education, and climate-resilience courseware. “Not a distinct category in baseline” means that the specific theme was not separately identified in the five-part 2024 distribution; it does not establish that no related activity occurred. The comparison therefore describes reporting emphasis and the visible range of examples rather than proving that an entire category began only in 2025.

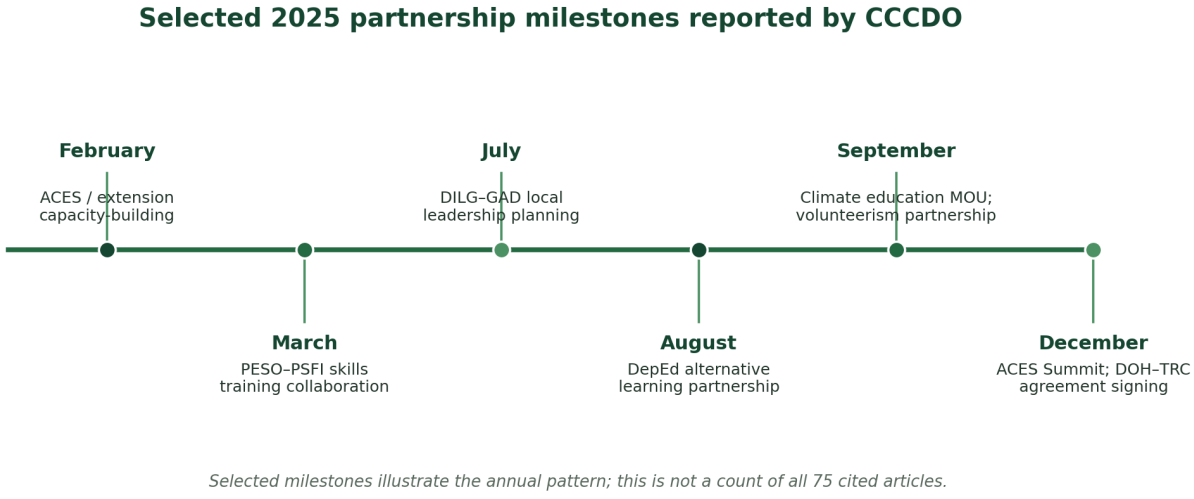

Figure 5. Selected milestones from the 2025 source list showing the breadth of partnership activity across the year.

Interpretation: The selected milestones span the year and illustrate partnerships operating through different mechanisms: training and extension capacity, vocational cooperation, planned local-leadership development, alternative-learning partnerships, climate and volunteerism agreements, and the ACES Summit or DOH–TRC agreement. The timeline is a curated illustration of selected source entries, not a count of all 75 references and not a claim that each month contained the same volume of partnership activity. It demonstrates that the 2025 partnership portfolio covered multiple sectors and institutional purposes over time.

Comparative Evidence Table

Dimension	2024 baseline evidence	2025 documented examples	Comparative interpretation
Strategic and international partnerships	MOUs with GO-HRE, BYU, and ASEAN Learning Cities Network; global/regional SDG events.	International climate-action education MOU; international forums, conferences, and academic connections.	International collaboration remained part of the institutional approach and was applied to sustainability education and knowledge exchange.
Local government and public institutions	Eight local offices and activities across 15 barangays; learning hubs and research caravans.	DepEd ALS initiatives; DepEd learning visit from 12 regions; DOH–TRC, DILG/GAD, PNVSCA, and DOLE-related cooperation.	The 2025 account supplies more examples of collaborative programs linked to public services, education, leadership, and workforce development.
Research networks and academic exchange	RICEFIELD, NorMinCIEERD, shared training, joint publications, and policy dialogue.	DOST–NorMinCIEERD engagement, Journal Exchange Program, RITE 2, research conference, research festival, and collaborative research.	Research collaboration continued and became more visible through distinct exchange activities, events, and joint investigations.
Training and innovation	Innovation Bootcamp with 200 participants; CHED SDG convergence.	ACES Summit with 40 project entries, 68 partner institutions, and over 250 participants; grant-writing and extensionist training.	The portfolio connected innovation with wider extension networks and more specified participation data in 2025.

Dimension	2024 baseline evidence	2025 documented examples	Comparative interpretation
Skills and resource support	Innovation and enterprise capacity building.	SKIL training opportunities for 38 youth; PESO/PSFI cooperation; equipment donations; DOLE internship program; solar-powered study shed.	2025 examples show collaboration contributing tangible resources and pathways to technical-vocational learning and work-related support.
Sustainability cooperation	Sustainability-oriented international representation and regional research collaboration.	Climate-action education MOU, climate-resilience courseware, DepEd learning exchange, and reported courseware learning indicators.	The 2025 account more clearly connects partnership activity to a focused sustainability education product and reported learning results.

How the Partnership Approach Developed from 2024 to 2025

The 2024 baseline emphasized the architecture of partnership: formal international MOUs, relationships with local offices, research consortia, capacity-building events, and participation in regional or global sustainability forums. Its quantitative distribution showed a strong emphasis on strategic and international partnerships, alongside local-government collaboration and research networks. These elements described how CCCDO positioned itself within a wider institutional ecosystem for shared learning and development.

The 2025 narrative provided a more varied set of implementation examples. Partnerships were linked to concrete programs in alternative learning, vocational training, extension capacity, research exchange, climate education, community governance, donations, internships, and public-service collaboration. The ACES Summit figures give one example of how a partnership forum brought project entries, institutions, and participants together. The climate courseware results provide another example of reported learning indicators attached to a collaboration-related initiative.

The apparent progression is therefore best understood as a broadening from partnership structures and program areas in 2024 toward a more detailed set of partnership applications in 2025. The reports show collaboration supporting both institutional development and activities for students, educators, trainees, public agencies, and communities. Because the years are described using different reporting formats—percentage contribution categories in 2024 and a large narrative inventory in 2025—the figures do not support a single numeric growth rate for total partnerships.

SDG 17 Alignment and Institutional Contribution

SDG 17 contribution area	CCCDO examples across 2024–2025	Nature of contribution documented
Multi-stakeholder partnerships	International MOUs; local-government programs; DOH, DepEd, DILG/GAD, PNVSCA, DOLE, and private-sector relationships.	Shared program delivery, coordination, resources, expertise, and institutional connections.
Knowledge and technology sharing	RICEFIELD, NorMinCIEERD, DOST–NorMinCIEERD, Journal Exchange Program, research conferences, and climate-resilience courseware.	Research exchange, shared learning, academic collaboration, and use of knowledge in education and extension.
Capacity-building	Innovation Bootcamp, extensionist training, grant-writing training, ALS teacher mentoring, leadership development, and skills training.	Development of personnel and partner capacity for educational, community, and sustainability initiatives.
Resource mobilization	SKIL financial and certification assistance, equipment donations, library resources, and solar-powered study shed.	External resources supplement institutional facilities, training, and student support.
Partnership platforms and convening	Global Sustainable Development Congress, ACES Summit, research festivals, and regional conferences.	Shared forums for institutions to present projects, exchange practice, and identify opportunities for collaboration.

Conclusion

The comparison of the 2024 baseline and 2025 institutional narrative shows that CCCDO's contribution to SDG 17 rests on a range of partnership mechanisms: formal agreements, local-government collaboration, research networks, training, private-sector participation, resource donations, and multi-stakeholder conferences. The 2024 report described a structured distribution of partnership areas, with strategic and international partnerships forming the largest share and local-government collaboration and research linkages providing important complementary elements.

During 2025, the documented portfolio connected these partnership structures to a broader range of educational and community applications. DepEd collaboration supported alternative learning programs and interregional exchange; research networks supported knowledge-sharing and collaborative investigation; government and private-sector partnerships contributed to skills development, community extension, and resources; and

sustainability cooperation supported climate education. The ACES Summit's reported 40 project entries, 68 partner institutions, and more than 250 participants illustrate the scale of one major collaborative platform, while the climate-resilience courseware results provide specific reported learning indicators for one initiative.

Taken together, the materials show qualitative progress in the breadth and application of CCCDO's partnership activity between 2024 and 2025. The most consistent interpretation is not a single percentage increase, but a documented expansion in the variety of partners, program settings, and practical outputs associated with collaboration. The report therefore presents SDG 17 as an enabling institutional approach through which CCCDO links education, research, extension, skills development, and sustainability with wider regional and community priorities.
