SDG 3:Good Health and Well-Being Progress Report

Good health and well-being are essential to inclusive education, social development, and sustainable communities. Sustainable Development Goal 3 (SDG 3) aims to ensure healthy lives and promote well-being for people of all ages. It emphasizes disease prevention, mental health, reproductive health, access to essential health services, and emergency preparedness. Higher education institutions contribute to this goal by providing health education, conducting relevant research, supporting students and employees, promoting safe learning environments, and engaging with communities.

The City College of Cagayan de Oro (CCCDO) implemented various SDG 3-related initiatives in 2024 and 2025. These activities addressed physical health, psychological well-being, health awareness, workplace safety, emergency preparedness, and community welfare. Through seminars, research, training, advocacy, and outreach, the College incorporated health-related concerns into its educational and institutional activities.

In 2024, CCCDO conducted the “Kaya’t Kaya: Gender and Sex Education in the Workplace” seminar, a fire safety lecture and drill, and the Bagong Pilipinas Youth Forum. The College also produced research publications concerning physical fitness testing and teachers’ self-efficacy, stress, and work commitment. Other initiatives included mindfulness, access to counseling, and institutional safety policies. Collectively, these efforts addressed health education, physical fitness, psychological well-being, and the importance of maintaining safe and supportive learning and working environments.

From January to October 2025, the College conducted mental health workshops and speakerships, awareness activities, suicide-prevention outreach, workplace wellness initiatives, and reproductive health advocacy. Emergency preparedness remained an important component through earthquake preparedness activities and first-aid training. CCCDO also organized bloodletting activities, participated in community immersion, and conducted child-friendly community validation. These initiatives extended the College’s engagement to preventive health, psychosocial support, emergency response, and community welfare.

A comparison of the two reporting periods shows continuity in CCCDO’s efforts to promote health awareness, improve safety preparedness, and support well-being. The 2024 initiatives established a foundation through health education, research, counseling, and safety activities. In 2025, the College continued these efforts while implementing activities that specifically addressed suicide prevention, reproductive health, first aid, blood donation, and community engagement. However, differences in the activities reported should be interpreted in consideration of the reporting periods and the available information.

To provide a balanced assessment, this report distinguishes between activities, outputs, and outcomes. Activities refer to programs implemented, such as seminars, workshops, training sessions, and outreach initiatives. Outputs include measurable results, such as the number of activities conducted, participants reached, and research publications produced. Outcomes

refer to changes associated with these efforts, including improved health knowledge, greater awareness of available support services, and stronger emergency preparedness.

The implementation of an activity does not automatically demonstrate a measurable improvement in health or well-being. For instance, attendance at a mental health seminar indicates participation but does not, by itself, establish improved mental health literacy. Similarly, conducting a safety drill confirms that preparedness training took place, while evidence of its effectiveness requires an assessment of participants' knowledge and response capabilities.

Accordingly, evaluating CCCDO's contributions to SDG 3 requires consistent documentation and, where available, evidence of results. Participation records, activity reports, training assessments, participant feedback, research outputs, and information on support services can help establish the reach and relevance of the initiatives. Follow-up assessments may further determine whether participants applied the knowledge gained or demonstrated improvements in preparedness and health-related practices. Any evaluation involving personal health information should observe appropriate confidentiality, consent, and data-protection requirements.

CCCDO's initiatives in 2024 and 2025 demonstrate its engagement in health promotion, psychological well-being, institutional safety, research, and community outreach. This report uses the 2024 activities as a baseline, examines the initiatives conducted from January to October 2025, and identifies areas for further assessment. By considering both implementation and available evidence of results, the report provides a more balanced understanding of the College's contributions to SDG 3 without equating the number of activities with their overall impact.

Key Findings

- CCCDO's SDG 3 initiatives combine health education, psychological well-being, workplace wellness, emergency preparedness, research, and community service.
- The 2024 report provides selected participation figures for three activities: 250 trainees, 180 staff/faculty, and 500 students. These sum to 930 reported participations, not necessarily 930 unique individuals.
- The 2025 report itemizes mental health and wellness activities more explicitly and includes bloodletting, first-aid training, earthquake drills, community immersion, and child-welfare engagement.
- No comparable annual total of unique beneficiaries or matched health-outcome indicators is supplied; therefore, overall year-to-year reach or health impact cannot be calculated.
- Future reporting should consistently record participation, service delivery, learning or preparedness outcomes, follow-up, and privacy-protecting aggregate measures.

1. Institutional Overview and SDG 3 Context

SDG 3 includes prevention, health promotion, access to essential services, mental health,

reproductive health, and risk reduction. For a college, these themes can be addressed

through student and staff wellness, preventive education, emergency drills, first-aid training, community health initiatives, and research. The activities documented in the supplied reports align with several of these pathways, but their contribution should be assessed according to what each program actually delivered.

A clear results chain distinguishes inputs (staff, funding, partners, and facilities), activities (seminars, drills, workshops, bloodletting, or outreach), outputs (people attending, sessions delivered, skills demonstrated), outcomes (improved knowledge, preparedness, service access, or help-seeking), and longer-term impact (healthier lives and improved well-being). The supplied reports contain examples and some activity counts, but generally do not provide matched baseline and follow-up outcome measures.

2. Research and Health Education

2.1 2024 Baseline: Research and Preventive Education

The 2024 report identifies two research publications relevant to SDG 3. Vargas's systematic review, "Exploration on the Evolution of the Purpose of Fitness Testing Throughout Time," addresses physical fitness testing and health education. Potane and Borres's study, "Influence of Self-Efficacy, Teachers' Stress, and Demographics on the Teachers' Work Commitment and Intention to Stay," examines psychological well-being and work commitment. These publications broaden the report's health perspective beyond physical health to include stress and workplace experience.

The College also conducted the "Kaya't Kaya: Gender and Sex Education in the Workplace" seminar, which reached 250 trainees, and the Bagong Pilipinas Youth Forum, which involved 500 students. These activities support preventive education and awareness. Attendance figures, however, do not establish how much knowledge changed or whether participants adopted new practices.

2.2 2025 Expansion: Mental Health and Practical Health Skills

The 2025 report describes a student leaders' mental health workshop addressing imposter syndrome, mental health first aid, and strategies for healthier student organizations. It also lists mental health speakerships, World Mental Health Awareness Month activities, and suicide-prevention strategies shared with Initao College. These examples make mental health a more explicit operational focus in the 2025 reporting.

Health education also includes advocacy on comprehensive sex education and adolescent pregnancy prevention through a Bombo Radyo interview, and CCCDO's role as a validator for the Search for Child-Friendly CDO. These activities connect public information and child well-being, although the supplied report does not provide audience totals or post-activity learning measures for these items.

2.3 How Research and Education Can Contribute to Well-Being

Research can inform curriculum, staff support, health policies, and community programming when findings are applied in practice. Health education may increase awareness and help

people make informed decisions. To show these contributions more clearly, CCCDO should document the intended audience, learning objectives, activities delivered, evaluation method, and any subsequent change in policy or practice. Publication and participation are important outputs, but they are not equivalent to measured health improvement.

3. Health Promotion, Safety, and Community Outreach

3.1 2024: Workplace Health and Fire Safety

The “Kaya’t Kaya” seminar was which reached 250 trainees and promoted gender sensitivity and safe workplace values. The Fire Safety Lecture and Drill, conducted with BFP–Puerto Station, involved 180 staff and faculty. These activities focus on prevention, awareness, and readiness. The supplied 2024 report does not include pre- and post-training assessments or details of corrective actions following the drill.

3.2 2024: Bagong Pilipinas Youth Forum

The Bagong Pilipinas Youth Forum, conducted with the Philippine Information Agency Region X and the Commission on Population and Development Region X, was which involved 500 students. Its stated focus included reproductive health, leadership, and responsible citizenship. The reported figure is an activity participation count and may not be directly comparable with the 2025 activity lists.

3.3 2025: Mental Health and Workplace Wellness

The 2025 report describes holistic wellness and mental wellness programs for faculty and staff, alongside student-leader workshops and mental health speakerships. It also records awareness and suicide-prevention outreach involving a partner college. These activities may help normalize discussion of mental health and strengthen institutional support. The report calls for better documentation of service access, referrals, and follow-up outcomes.

3.4 2025: Emergency Preparedness and First Aid

CCCDO conducted a comprehensive earthquake drill and basic first-aid training for NSTP students. The activities address emergency readiness and practical response skills. To assess their effectiveness, future reports should include participation, observed performance, skills checks where appropriate, identified gaps, and follow-up corrective actions.

3.5 2025: Blood Donation and Community Engagement

During 2025, CCCDO conducted Dugong Bayani bloodletting activities and NSTP community immersion in Barangay Agusan, and participation in the LGU Pasigarbo Teen Center Evaluation. It also identifies child-friendly community validation. These initiatives connect students and the College with community service and public-health-related engagement. The report does not provide a consistent, comparable total of unique community members reached across these activities.

SDG 3: GOOD HEALTH AND WELL-BEING

Connected 2025 Evidence: Community Health, Research, and Psychosocial Well-being

This supplemental section expands the 2025 discussion in the main report by connecting three specific contributions documented in CCCDO's supporting material: blood donation, research dissemination, and international virtual participation. Together, they illustrate different but related ways the College engaged with SDG 3—through direct community health support, research about student well-being, and activities relevant to social and emotional development.

Blood Donation and Community Engagement — Expanded Evidence

Dugong Bayani Bloodletting Activity (May 9, 2025). The City College of Cagayan de Oro (CCCDO), through its Extension and Outreach Office, conducted the college-wide Dugong Bayani 2025 bloodletting activity at CCCDO Housekeeping Rooms A and B during the College Festival Day celebration. Students, faculty, staff, and community volunteers took part. The supporting narrative reports that approximately 27 bags of blood were collected to help meet patient needs across Northern Mindanao.

The activity was carried out with the support of the Northern Mindanao Medical Center (NMMC), Department of Health (DOH), and Cagayan de Oro City Police Office (COCPO). Their collaboration supported the safe and orderly conduct of the blood donation process. Beyond the immediate collection of blood, the activity promoted volunteerism, compassion, and social responsibility, and connected campus participation with a wider community health need.

For SDG 3 reporting, the approximately 27 bags collected are a concrete activity output. They should not be presented as a count of donors or patients served, because the supplied source does not provide those figures. This distinction keeps the report factual while showing the practical public-health contribution of the activity.

Research on Academic Resources and Student Well-being

CCCDO's research contribution adds an academic dimension to its SDG 3 work. At the 5th International Conference and 2025 NOTED National Convention, the College presented the study *"Academic Resources and Wellbeing as Predictors of Academic Performance: Insights and Future Directions at City College in the Context of SDGs 3, 4, and 10."* The supporting document lists the authors as Dr. Joel Potane, Ms. Faith Colarte, Dr. Melody Agcito, and Mr. Valcyrus Madarieta.

The study received the Best Paper for Oral Presenters Award in Session B. Its focus links academic resources and student well-being with academic performance, making it relevant to discussions of supportive learning environments and student welfare. The conference presentation and award demonstrate research dissemination and recognition. They do not, on their own, establish that student well-being or academic performance improved; the source material does not provide outcome measurements for that claim.

SDG 3: GOOD HEALTH AND WELL-BEING

International Virtual Participation and Psychosocial Well-being

CCCDO also participated in Virtual CommTECH Nusantara 2025: The Spirit of Indonesia Heroes, held from November 10 to 21, 2025. The supporting document identifies Mr. Joseph G. Barillo, MBA, Program Chair of the Bachelor of Science in Office Administration, and students Shaine Marie Redublado and Maria Paula Viaje as participants.

The supporting narrative describes intercultural learning, virtual cultural exchange, collaborative discussions, and reflection on the stories and values of Indonesian national heroes. Themes included courage, resilience, unity, perseverance, empathy, and cultural sensitivity. These experiences are relevant to the psychosocial dimension of well-being because they provide opportunities for reflection, social connection, and engagement with people from different cultural backgrounds.

Mr. Barillo received the Best Reflection Award. The source also describes the students' participation as an opportunity to develop confidence, communication, and adaptability in a multicultural setting. These are reported learning and personal-development contributions. The evidence provided does not include a formal mental-health assessment, so the program should be described as relevant to psychosocial well-being rather than proof of a measured mental-health improvement.

How the Contributions Connect to the SDG 3 Comparison

Taken together, these examples show three complementary pathways in CCCDO's 2025 SDG 3 engagement. Dugong Bayani provided a direct community-health service and a countable output; the conference paper contributed research on academic resources and student well-being; and CommTECH Nusantara provided an international learning experience associated in the source narrative with reflection, resilience, and social connection. The activities differ in form, so their outputs should be reported separately rather than combined into one impact figure.

In comparison with 2024, these additions make the 2025 account more specific about blood donation results, research recognition, and international participation. They enrich the qualitative comparison but do not support a numerical claim that overall health outcomes improved from 2024 to 2025. The supplied evidence does not provide equivalent outcome measures or a common annual total of unique beneficiaries for these activities.

3.6 From Activity Delivery to Sustainable Well-Being

The initiatives address different needs and should be evaluated differently. Health education can be assessed through learning checks and feedback; mental health initiatives through safe, confidential aggregate service-access and referral indicators; emergency drills through readiness and performance; blood donation through verified service records; and community engagement through documented services and partner feedback. A single combined “impact” figure would obscure these differences.

4. Figures and Comparative Analysis

Figure 1. Participation in Selected 2024 Activities

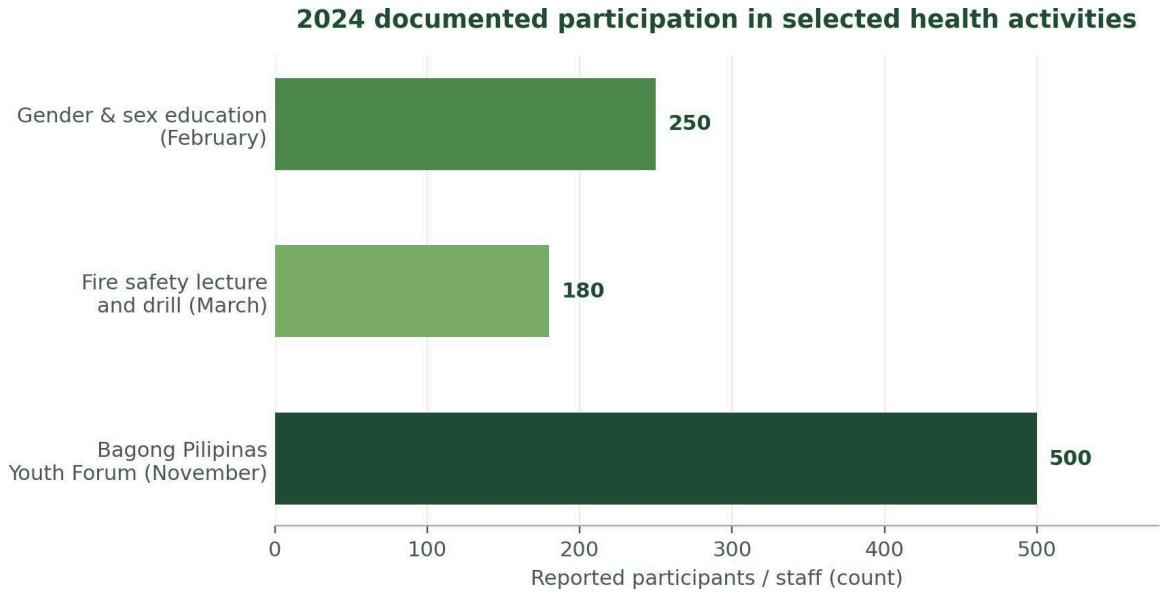

Figure 1. Participation in three selected 2024 activities. The values are reproduced from the supplied 2024 report and do not deduplicate people who may have participated in more than one activity.

Interpretation: The Bagong Pilipinas Youth Forum had the largest reported participation among the three listed activities (500 students), followed by the gender and sex education seminar (250 trainees) and fire safety lecture and drill (180 staff/faculty). Together these represent 930 reported participations, not a verified count of unique beneficiaries and not evidence of a change in health outcomes.

Figure 2. 2025 Activity Themes

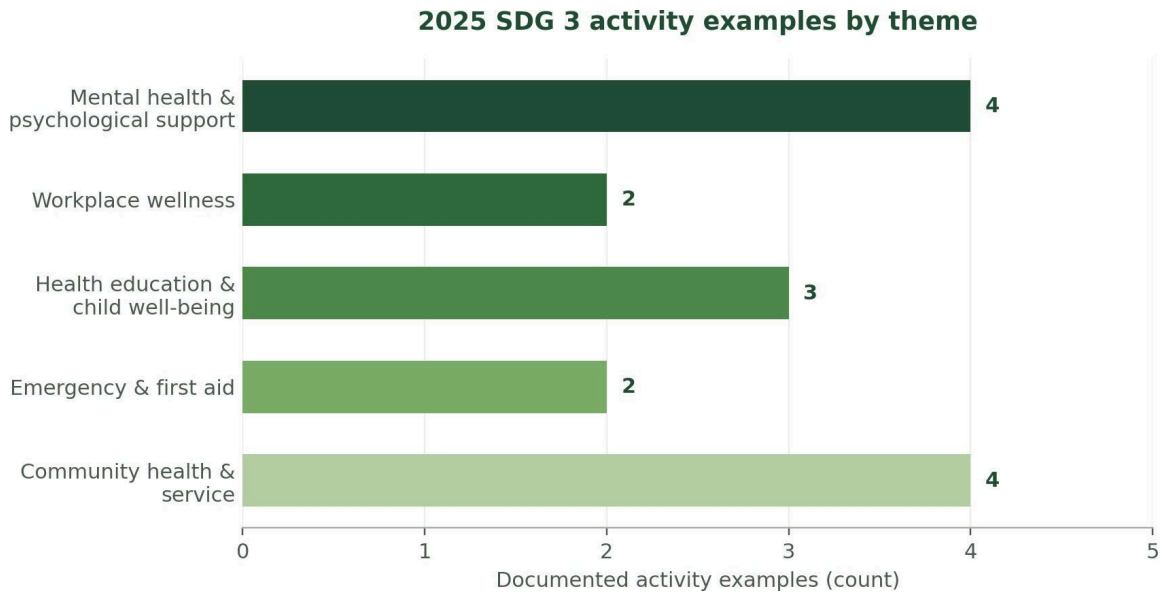

Figure 2. Descriptive inventory of themes and examples named in the January–October 2025 report. Counts are based on the report narrative, not participant totals or program effectiveness.

Interpretation: During 2025, CCCDO carried out activities across mental health, workplace wellness, health education, emergency preparedness, and community service. Theme counts depend on how examples are grouped and may overlap. They should not be compared directly with 2024 participation counts.

Figure 3. Presence of Themes in the Two Supplied Reports

Figure 3. Theme comparison across the supplied 2024 and January–October 2025 reports. "Not listed" means the theme was not specifically described in that report; it does not prove that the College had no activity in that area.

Interpretation: Mental health, workplace wellness, health education, emergency preparedness, and community engagement appear across the reporting period, though the level of detail differs. The 2024 report itemizes two research publications and selected participation figures; the 2025 report provides more detailed examples of operational mental-health and community-health activities. This pattern may reflect differences in emphasis and reporting completeness as well as changes in actual activity.

5. Impact and Institutional Synergy

The reports suggest that research, preventive education, wellness programs, emergency preparedness, and community engagement can reinforce one another. Research may inform institutional decisions; education can support awareness and informed choices; drills and first-aid training build readiness; and partnerships extend activities beyond the campus. Their contribution is strongest when the College documents the path from activity to output and then to a verified outcome.

Area	2024 evidence	2025 evidence	Comparative interpretation
Research	Two identified publications on fitness testing and teachers' self-efficacy, stress, and work commitment.	A physical education convention is listed; the report emphasizes health activities and wellness initiatives.	Research is more explicitly itemized in the 2024 report; a complete matched publication inventory is needed.
Mental health	Psychological well-being appears in research and general discussion of mindfulness/counseling.	Student-leader workshop, mental-health speakerships, awareness activities, and suicide-prevention outreach.	Mental health is more visible and specifically described in the 2025 report.
Safety and preparedness	Fire safety lecture and drill; 180 staff/faculty participated.	Earthquake drill and basic first-aid training for NSTP students.	Preparedness remained an area of activity, with different training topics.

Community health	Youth forum with 500 students and gender/sex education with 250 trainees.	Bloodletting, community immersion, child-friendly validation, and teen-center evaluation.	Community engagement continues, but comparable unique-beneficiary totals are unavailable.

Outcome measurement	Selected activity counts and a report of more than 900 beneficiaries across activities.	Progress indicators are listed, but per-activity reach and follow-up outcomes are limited.	No defensible year-to-year overall reach or health-impact calculation is possible.

5.1 Institutional Strengths

- Multi-dimensional approach spanning health education, research, mental health, safety, and community engagement.
- Partnership-based activities involving public agencies, partner institutions, and local community programs.
- Attention to both physical preparedness and psychological well-being.
- A foundation of completed initiatives that can support more consistent monitoring.

5.2 Evidence Gaps and Reporting Risks

- The two reports cover different periods: selected 2024 activities and January–October 2025.
- The 2024 participation total is a sum of activity counts and may include repeated participants.
- The 2025 report does not provide a comparable overall total of unique beneficiaries.
- Comparable pre/post health, well-being, preparedness, or learning measures are not supplied.
- Mental-health reporting must protect privacy and should use non-identifying aggregate data.

6. Alignment with SDG 3 Themes

The following mapping is an analytical guide to the potential relevance of reported activities. It is not a claim that each activity has achieved a specific SDG target or improved health outcomes.

SDG 3-related theme	CCCDO initiative or contribution	Evidence needed to assess outcomes
Mental health and well-being	Student-leader workshop, speakerships, awareness activities, suicide-prevention outreach, and staff wellness.	Attendance, confidential aggregate service access, referral completion, participant feedback, and suitable follow-up measures.
Reproductive and preventive health education	Gender and sex education and advocacy on comprehensive sex education and adolescent pregnancy prevention.	Audience reach, learning checks, participant feedback, and referral pathways where relevant.

Emergency risk reduction	Fire safety lecture and drill, earthquake drill, and first-aid training.	Skills checks, drill observations, response readiness, identified gaps, and corrective actions.
Community health and service	Bloodletting, NSTP community immersion, child-friendly validation, and teen-center evaluation.	Unique participants, services delivered, partner feedback, and verified follow-up actions.
Research on health and well-bein g	Studies on physical fitness testing and teachers' self-efficacy, stress, and work commitment.	Complete publication details, research uptake, citations, implementation, and evidence of application.

7. Recommendations and Forward Strategy

7.1 Establish a Common SDG 3 Results Register

Maintain a central register of activities with dates, responsible offices, partners, intended audiences, attendance, services delivered, supporting records, and follow-up status.

7.2 Distinguish Unique Beneficiaries from Attendance

Record whether figures represent unique people, event attendance, or repeat participation. Use consistent definitions across reporting years.

7.3 Strengthen Mental Health Monitoring Safely

Use privacy-protecting aggregate indicators such as participation, access to support, referral completion, and voluntary feedback. Avoid identifiable personal health information in public reports.

7.4 Measure Learning and Preparedness

For health education, use brief learning checks or participant evaluations where appropriate. For drills and first-aid training, record observed performance, identified gaps, and follow-up actions.

7.5 Connect Research to Institutional Practice

Record publication details and whether findings inform curriculum, campus policy, staff support, student services, or community programs.

7.6 Improve Partnership and Community Reporting

Document partner roles, services, agreed outputs, resources contributed where verifiable, and next steps. Keep financial and in-kind contributions distinct.

7.7 Use a Consistent Annual Review Cycle

Review activity records at year-end, verify figures, compare equivalent reporting periods, describe limitations, and set realistic indicators for the next cycle.

7.8 Recommended Monitoring Indicators

Area	Suggested indicator	Evidence/source	Frequency
Health education	Participants reached; learning-check results; feedback.	Attendance, evaluation forms, session materials.	Per activity; annual summary.
Mental health	Workshop attendance; aggregate service access; referral follow-up where appropriate.	Activity records and confidential aggregate service data.	Per program cycle; annual summary.
Emergency readiness	Participants trained; skills demonstrated; corrective actions completed.	Training records, drill reports, assessment checklists.	After each drill/training.
Community health	Unique people served; services delivered; partner feedback.	Activity reports, partner records, non-identifying attendance totals.	Per activity; annual summary.
Research	Publications and outputs; verified uptake or implementation.	Publication records and relevant policy or curriculum documents.	Quarterly/annual.
Health outcomes	Appropriate baseline and follow-up measures linked to each program.	Validated assessment tools or ethically collected evaluation data.	At baseline and defined follow-up.

Conclusion

The supplied 2024 and January–October 2025 reports describe CCCDO's continuing work in health education, research, mental health, workplace wellness, emergency preparedness, and community service. The 2024 report provides selected participation figures and two identified research publications, while the 2025 report gives more detailed examples of mental-health programming, first-aid training, earthquake preparedness, bloodletting, and community engagement.

These activities provide a foundation for institutional contribution to SDG 3, but the available information does not establish a comparable year-to-year change in unique beneficiaries or health outcomes. The most defensible conclusion is that CCCDO documented a varied set of

health and well-being initiatives across the two reports, with stronger evidence needed to

assess their effectiveness. Consistent monitoring, matched reporting periods, follow-up measures, and verified records would allow future reports to describe progress more conclusively.

Sources and Verification Notes

This report is based primarily on the two supplied CCCDO SDG 3 reports and the official article links listed in the 2025 report. Activity descriptions and figures are drawn from those materials. Where the reports do not provide comparable beneficiary totals or health-outcome measures, these values are identified as unavailable rather than estimated.
