SDG 4: QUALITY EDUCATION PROGRESS REPORT

Sustainable Development Goal 4 (SDG 4) aims to ensure inclusive and equitable quality education and promote lifelong learning opportunities for all. It emphasizes the importance of accessible education, qualified educators, relevant curricula, skills development, research, and supportive learning environments in achieving sustainable development.

Higher education institutions play a significant role in advancing this goal by providing quality instruction, strengthening faculty and staff competencies, conducting research, expanding educational opportunities, supporting student welfare, and establishing partnerships with government agencies, schools, industries, and other academic institutions. These efforts help ensure that learners acquire the knowledge, skills, and competencies necessary for personal development, employment, community participation, and lifelong learning.

The City College of Cagayan de Oro (CCCDO) contributes to SDG 4 through its academic programs, research initiatives, faculty development activities, student support services, technical-vocational opportunities, curriculum enhancement, and institutional partnerships. Its reported education-related initiatives for 2024 and 2025 demonstrate continuing efforts to strengthen educational quality, promote inclusive access, and respond to the evolving needs of students and educators.

In 2024, CCCDO reported six peer-reviewed studies, eight faculty capacity-building and teacher-training activities, five educational partnerships, five conferences and dissemination activities, and three student access programs. Other initiatives included technical-vocational scholarships, mentorship, counseling, and the promotion of gender-responsive learning environments.

For 2025, the available institutional summary highlights curriculum innovation, climate resilience courseware, technical-vocational certification, teaching capacity development, mental health support, freshman enrollment, and local and international academic partnerships. These initiatives reflect the institution’s continued attention to relevant learning experiences, practical skills, student well-being, and collaboration within the education sector.

This progress report documents CCCDO’s reported contributions to SDG 4 for 2024–2025, identifies the major areas of implementation, and assesses their relevance to inclusive and equitable quality education. It also establishes the importance of consistent documentation, measurable indicators, and outcome-based assessment in monitoring the institution’s progress toward educational development.

Executive Assessment

The available reports indicate that CCCDO has undertaken a range of education-related initiatives supporting the objectives of Sustainable Development Goal 4 during 2024 and 2025. These initiatives cover key areas of educational development, including research and knowledge production, faculty capacity-building, academic collaboration, technical-vocational training, student access, curriculum development, and student support services.

Research and faculty development remain important components of institutional progress. The reported six peer-reviewed studies and eight faculty capacity-building and teacher-training activities in 2024 demonstrate documented efforts to support academic inquiry and strengthen teaching competencies. Educational partnerships, conferences, and dissemination activities further contribute to knowledge exchange, professional development, and institutional collaboration.

The institution's reported activities also address access, inclusion, and student welfare. Technical-vocational scholarships, student access programs, mentorship, counseling, and gender-responsive learning environments support the broader objective of creating educational opportunities that respond to learners' diverse needs. The 2025 summary further identifies freshman enrollment and mental health support as relevant areas of institutional activity.

Curriculum innovation, climate resilience courseware, and technical-vocational certification are additional initiatives highlighted in the available 2025 documentation. These efforts are relevant to the development of practical competencies, environmental awareness, and learning experiences that respond to emerging educational and societal needs. Local and international academic partnerships also provide opportunities for knowledge sharing and the continued development of institutional capabilities.

The documented initiatives demonstrate CCCDO's continuing engagement with several dimensions of SDG 4, particularly educational quality, faculty development, skills acquisition, student support, and institutional collaboration. However, the available information primarily describes activities and selected outputs rather than measurable educational outcomes. Further documentation of student participation, training completion, certification results, learning achievement, retention, and program effectiveness would strengthen the assessment of progress.

The findings therefore provide a basis for continued monitoring and improvement of CCCDO's SDG 4 initiatives. Sustained implementation, consistent reporting, and evidence-based evaluation will be important in demonstrating how these activities contribute to more inclusive, equitable, and quality education and to the achievement of lifelong learning opportunities for all.

Area	2024 evidence	2025 evidence	Comparative interpretation
Research and curriculum	Six peer-reviewed studies reported; topics included AI-supported writing, language policy, teacher well-being, fitness education, and research culture.	Climate resilience courseware; publications on AI in language education and Modern Arnis; sustainability research and journal exchange.	Research continues, with 2025 examples showing more visible curriculum and sustainability application. Outcomes of adoption are not quantified.
Teacher development	Eight capacity-building/teacher-training activities reported; research workshop and professional presentations described.	Grant-writing capacity building and comprehensive lesson plans on climate change education.	Both years emphasize teacher and institutional capacity. The reports do not show comparable participant totals or measured teaching improvements.
Skills and employability	TESDA TWSP scholarships worth ₱900,000 supported SMAW NC I/II certification; TVET and practicum pathways were reported.	TSTI graduation; Carpentry NC II and Barangay Health Services NC II passers; PESO/PSFI collaboration.	The 2025 summary gives concrete certification examples, while the 2024 report provides a scholarship amount. Completion, placement, and earnings data are absent.
Student access and support	Three student access programs reported; SASO mentorship, counseling, volunteerism, AGAK Career Mentorship, and inclusive policies described.	Freshman enrollment for AY 2025–2026 and mental health programs/speakerships described.	Access remains important; 2025 reporting makes student well-being more visible. Comparable retention and service-use data are not supplied.
Partnerships and exposure	Five educational partnerships and five conferences/dissemination activities reported.	Collaboration with Cebu Technological University and Xavier University; international conference activity on GenAI and education.	Partnerships remain a key mechanism for sharing expertise and keeping programs responsive to changing education needs.

1. **Reported numerical data.** Counts explicitly stated in the available 2024 documentation are presented as reported institutional outputs. These figures describe documented activities and are not, by themselves, measures of educational effectiveness.
2. **Documented initiative examples.** Activities identified in the available 2025 documentation and its article references are grouped according to their primary educational focus. This classification provides a structured overview of the initiatives documented in the available materials.
3. **Qualitative assessment.** The initiatives are examined in terms of their potential contributions to educational quality, equitable access, faculty development, practical skills acquisition, student well-being, and lifelong learning. Potential contributions are distinguished from outcomes that have been directly measured or verified.

Classification and Interpretation of Activities. For reporting and visualization, initiatives are organized under relevant educational themes. The counts presented in Figure 2, where applicable, represent a manual classification of examples from the available 2025 documentation. They are descriptive counts, not official institutional totals or independently verified measures of implementation. Because one initiative may contribute to multiple educational objectives, it may be classified under more than one theme. These classifications are intended to clarify the range of reported activities rather than establish mutually exclusive categories of performance.

Treatment of Missing Information. The term *"Not listed"* indicates that an activity, program, or indicator was not specifically described in the available documentation. It does not mean that CCCDO did not implement the activity. Similarly, the absence of a numerical count or supporting detail is treated as a limitation of the available documentation, not as evidence of non-implementation.

Limitations of the Report. The available sources do not provide a complete and consistently measured dataset covering student learning outcomes, graduation and completion rates, employment outcomes, student retention, or other long-term educational indicators. Therefore, the report cannot establish the extent to which the documented initiatives directly improved educational performance or quantify changes in learning outcomes. Its findings are limited to the activities, outputs, and descriptive evidence contained in the available materials.

For future reporting, CCCDO may strengthen its monitoring framework by applying consistent annual indicators, maintaining verifiable implementation records, documenting program participation, and incorporating appropriate measures of learning achievement, student progression, skills certification, and program effectiveness. These measures would support more reliable monitoring, evidence-based planning, and accountability in advancing SDG 4.

This methodology provides a transparent basis for documenting CCCDO's reported accomplishments and assessing their relevance to quality education. By distinguishing reported numerical information, documented examples, and qualitative interpretation, the

Report presents a structured account of institutional progress while recognizing the limitations of the available evidence.

Comparative Analysis of Documented Initiatives

1. Research, Curriculum Innovation, and Sustainability

In 2024, CCCDO reported six peer-reviewed studies addressing educational technology, AI-assisted writing, language policy, teacher self-efficacy and stress, fitness education, and research culture. The report states that findings were connected to faculty training, syllabus revisions, and community seminars. This research-to-practice link matters because research can strengthen instructional decisions and help ensure that curricula respond to learner needs.

In 2025, the supplied summary highlights climate resilience courseware, sustainability research, academic publications on AI in language education and Modern Arnis, and journal-exchange activity. These examples suggest that the research agenda continued while more applied and sustainability-oriented outputs became visible in the report. Climate resilience courseware can help contextualize learning around real local challenges; AI-related scholarship can support discussion of emerging tools and their responsible use.

Why it matters: research improves quality when findings are used, not simply published. How to strengthen evidence: record whether courseware is adopted in classes, which programs use revised syllabi, how many learners are reached, and whether teaching or learning assessments change after implementation.

2. Teacher Capacity and Teaching Quality

The 2024 report identifies eight capacity-building and teacher-training activities, including a four-day institutional research workshop on structural modeling, an AI-in-higher-education webinar, professional development, and research dissemination. The 2025 summary describes training for cluster partnership coordinators in grant writing and the presentation of comprehensive lesson plans on climate change education.

The continuity across both years is an investment in the capability of faculty and academic partners. Grant-writing skills can help teams develop and sustain educational projects, while lesson planning on climate change can support more responsive classroom instruction. However, attendance or the delivery of training alone does not prove that teaching improved.

Why it matters: educator capability shapes course design, assessment, research quality, and the sustainability of programs. How to measure progress: track participation, completion, post-training application, peer review of lesson plans, research proposals submitted, grants secured, and classroom-level changes.

3. Equitable Access, Scholarships, and Vocational Pathways

The 2024 report records a ₱900,000 TESDA Training for Work Scholarship Program allocation supporting disadvantaged learners pursuing SMAW NC I/II certification. It also describes three student access programs and student-support mechanisms such as

mentorship and counseling. These measures address financial and non-academic barriers that can prevent learners from entering or completing education.

The 2025 summary highlights the TSTI's 12th graduation, new Carpentry NC II and Barangay Health Services NC II passers, collaboration with PESO and PSFI, and the freshman enrollment process for AY 2025–2026. Together, these examples connect access with practical skills and potential employment pathways.

Why it matters: access is meaningful when learners can participate, complete training, gain recognized skills, and transition to further education or work. How to assess impact: publish scholarship recipients and completion rates, certification pass rates, graduate employment or further-study status, and disaggregated data where appropriate and privacy-protective.

4. Student Well-Being, Inclusion, and Support Services

The 2024 report describes SASO mentorship, counseling, volunteerism, the AGAK Career Mentorship Program, gender equality modules, anti-bullying protocols, and inclusive classroom design. These initiatives recognize that quality education includes safe learning environments and support for students' academic and personal development.

The 2025 summary more explicitly names mental health programs and speakerships. This makes student well-being a more visible operational theme in the 2025 source. Mental health support may help learners navigate stress and participate in academic life, but the supplied summary does not provide comparable service-use, referral, satisfaction, or retention data.

Why it matters: student support can help reduce barriers to participation and persistence. How to strengthen evidence: report program attendance, anonymized service-access trends, participant feedback, referral pathways, and student retention or completion indicators without disclosing sensitive personal information.

5. Academic Partnerships and International Exposure

The 2024 report describes collaborations with TESDA, DICT, DepEd, Microsoft Philippines, PAFTE, ALCU Northern Mindanao, and other partners. It records five educational partnerships and five conferences/dissemination activities. The report links these collaborations to technology integration, vocational access, faculty development, and research exchange.

In 2025, the supplied summary names collaboration with Cebu Technological University and Xavier University, alongside participation in or hosting of international conference activities discussing generative AI and education. Such engagement can expose faculty and students to new approaches, facilitate shared expertise, and encourage institutional learning.

Why it matters: partnerships expand resources and opportunities that a college may not provide alone. How to evaluate them: track active joint projects, co-authored outputs, shared training, student and faculty participation, resources mobilized, and evidence of sustained outcomes beyond the signing of agreements or attendance at events.

Figures and Charts

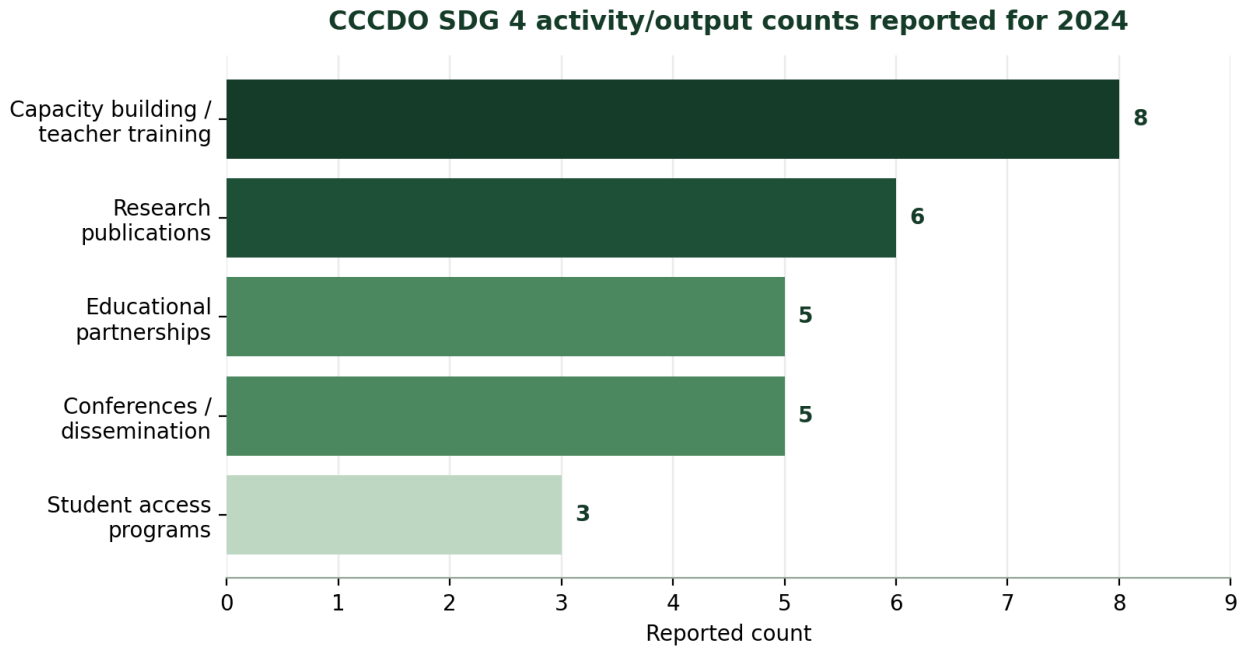

Figure 1. Programmatic counts reported in the 2024 SDG 4 report. Values are reproduced from the source report.

Interpretation. Faculty capacity-building and teacher training represented the largest reported category, with eight activities, followed by research publications with six, educational partnerships with five, conferences and dissemination activities with five, and student access programs with three. This distribution highlights the reported emphasis on strengthening teaching competencies and professional development as key components of CCCDO's efforts to support quality education.

The eight reported capacity-building and teacher-training activities underscore the importance of developing educators' knowledge, skills, and instructional capabilities. Faculty development can help improve teaching practices, strengthen the delivery of academic programs, and enable educators to respond to changing educational requirements and student learning needs. In relation to SDG 4, these efforts are particularly relevant to Target 4.c, which emphasizes the importance of qualified teachers and improved teacher training.

Research publications ranked second, with six reported outputs, highlighting the role of academic research in supporting knowledge production, evidence-based instruction, and institutional development. Research can contribute to quality education by informing curriculum improvements, encouraging critical inquiry, and providing opportunities for faculty members to contribute to academic and professional discussions. The five reported educational partnerships further demonstrate the importance of collaboration in expanding access to expertise, resources, and opportunities for academic development.

Similarly, the five conferences and dissemination activities indicate the reported role of academic engagement and knowledge sharing in supporting institutional learning.

Conferences and dissemination activities provide opportunities to present research findings, exchange ideas, establish professional connections, and encourage collaboration among educators and institutions. These activities can complement faculty development and research by helping translate academic work into broader educational discussions and potential applications.

Student access programs accounted for three reported activities, highlighting another important dimension of SDG 4: ensuring that learners have opportunities to participate in education. Initiatives such as technical-vocational scholarships and other access-related programs may help address financial or institutional barriers and support the development of relevant skills. Although this category recorded the lowest count among the five reported areas, the number alone does not indicate its relative importance or the number of students who benefited from these initiatives.

Taken together, the distribution suggests that the 2024 report placed considerable emphasis on strengthening educators and institutional knowledge, while also documenting efforts in research dissemination, external collaboration, and student access. These categories represent complementary dimensions of educational development: capable educators support effective instruction, research contributes to knowledge production, partnerships facilitate resource and expertise sharing, and access programs help connect learners with educational opportunities.

However, the figures should be interpreted strictly as the counts reported under the source document's five categories. They do not establish the quality, reach, or effectiveness of the activities, nor do they demonstrate measurable improvements in teaching performance, student learning, or educational equity. The counts also should not be interpreted as a complete inventory of all CCCDO initiatives unless the source confirms that the reporting is comprehensive. Assessing the actual contribution of these activities to SDG 4 would require additional evidence, including faculty participation and training outcomes, research utilization, partnership results, and the number and educational progress of students reached through access programs.

The reported distribution provides an overview of CCCDO's documented areas of activity and establishes a basis for continued monitoring of its contribution to quality education. To strengthen future progress reports, the institution should retain consistent category definitions and supplement activity counts with appropriate output and outcome indicators. This would allow the report to demonstrate not only the range of initiatives implemented but also their contribution to improved teaching, meaningful learning opportunities, and inclusive educational developmen

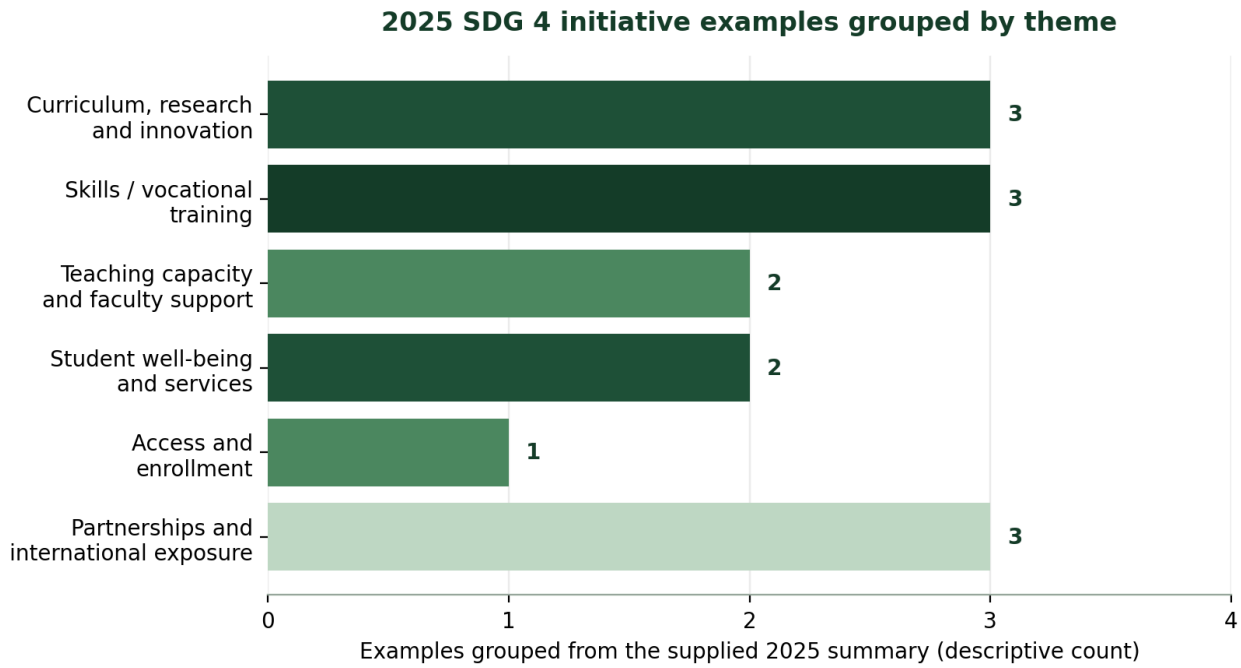

Figure 2. Descriptive inventory of initiative examples grouped from the supplied 2025 summary. These are not official annual totals and are not directly comparable with Figure 1.

Interpretation: The supplied 2025 summary covers several connected areas: curriculum and research innovation, skills and vocational training, faculty capacity, student well-being, access and enrollment, and partnerships/international exposure. The figure is useful for showing the breadth of reported themes, but its counts reflect the examples grouped for this analysis rather than a verified count of every institutional activity.

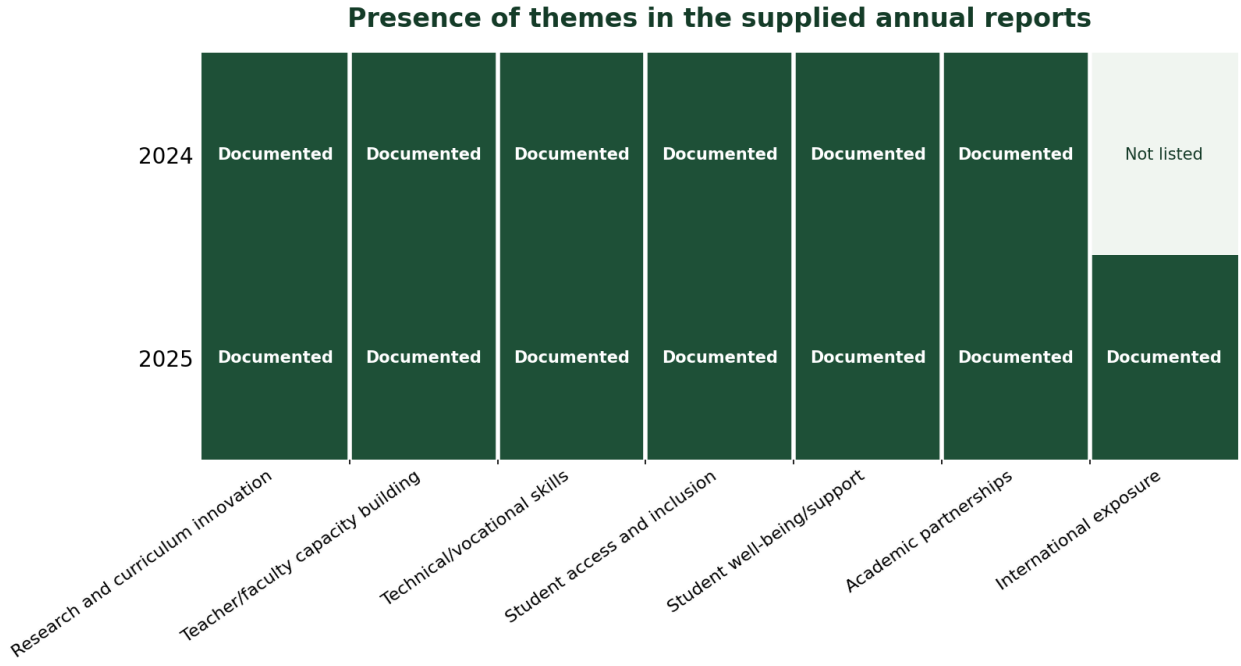

Figure 3. Presence of selected themes in the two supplied reports. "Not listed" reflects the scope of the supplied source, not confirmed absence of activity.

Interpretation: Research, teacher development, vocational skills, student access, student support, and partnerships 121in both years' supplied reporting. International exposure is explicitly highlighted in the 2025 summary but is not separately listed as a category in the 2024 report. This may reflect a change in emphasis, the reporting structure, or the particular activities selected for inclusion.

Comparative Indicators and Data Limitations

Indicator	2024 report	2025 report	What can be concluded
Research outputs	Six peer-reviewed studies reported.	Multiple research/publication examples, including climate resilience courseware and publications on AI and Modern Arnis; no matching total in the summary.	Research activity continues, but a comparable publication total cannot be calculated from the supplied 2025 summary.
Capacity building	Eight activities/programs reported in the category.	Grant-writing training and lesson-plan presentations named; no annual total provided.	Faculty capacity remains a priority; relative growth or decline cannot be measured.
Educational partnerships	Five reported.	Named collaborations with Cebu Technological University and Xavier University, among other partnerships.	Partnership activity is visible in both years; no consistent measure of active projects or results is supplied.
Student access	Three programs reported; ₱900,000 TESDA TWSP scholarship support described.	Freshman enrollment and vocational certification pathways named; no matching aggregate beneficiary count.	Access mechanisms are documented in both years; change in reach cannot be calculated.
Learner outcomes	No matched completion, learning-gain, or employment dataset supplied in the report text.	No comparable learning-gain, retention, completion, or employment totals supplied in the summary.	The reports establish activities and selected outputs, not a quantified change in educational outcomes.

A key limitation is that 2024 has category-level counts while the 2025 source is a thematic narrative. A valid year-to-year comparison would require the same definitions, reporting period, and counting rules in both years. Missing data are not treated as zero, and the number of article links is not treated as the number of programs or beneficiaries.

Alignment with SDG 4 and Evidence Needed

SDG 4-related area	Documented CCCDO contribution	Evidence to strengthen future assessment
Research on education and innovation	Peer-reviewed studies, AI-related scholarship, climate resilience courseware, research festivals and dissemination.	Publication inventory, courseware adoption, citations, research uptake, syllabus changes, learner reach, and documented use in policy or practice.
Lifelong learning and teacher development	Research workshop, webinars, professional presentations, grant-writing capacity building, and lesson-plan development.	Participant numbers, completion, post-training application, peer review, and evidence of improved instructional practice.
Equitable access and vocational learning	TESDA TWSP scholarship support, freshman enrollment, TSTI graduation, NC II certifications, and TVET partnerships.	Scholarship recipients, retention, completion, certification pass rates, graduate progression, and employment/further-study outcomes.
Safe, inclusive learning and student support	Mentorship, counseling, anti-bullying and gender-responsive measures, and mental health programs/speakerships.	Aggregated service access, participation, feedback, referral completion, retention, and accessibility reviews.
Partnerships and knowledge exchange	Work with public agencies, industry/technical partners, universities, academic networks, and international conference communities.	Active joint projects, shared resources, co-authored work, participation, and sustained outcomes from agreements.

Conclusion

The supplied 2024 and 2025 reports show CCCDO's sustained engagement with quality education through research, faculty capacity building, vocational learning, student access and support, and academic partnerships. The 2024 report provides more explicit category counts and describes a ₱900,000 TESDA scholarship allocation, six peer-reviewed studies, eight capacity-building activities, five partnerships, five conferences/dissemination activities, and three student access programs. The 2025 summary presents examples of climate resilience courseware, technical-vocational certification, grant-writing training, climate education lesson plans, mental health support, enrollment, and university/international collaboration.

The comparison suggests continuity with a broader visible range of applied and student-centered initiatives in the 2025 summary. It does not, however, establish a measured year-to-year improvement in learning quality, access, retention, or graduate outcomes. CCCDO can strengthen future SDG 4 reporting by aligning definitions and reporting periods, maintaining comparable annual indicators, and tracking whether initiatives lead to measurable benefits for learners, educators, and communities.
