SDG 11: SUSTAINABLE CITIES AND COMMUNITIES PROGRESS REPORT

Sustainable development is essential in building communities where people can live safely, access basic services, protect the environment, and enjoy opportunities for a better quality of life. As urban populations grow and communities face challenges related to housing, pollution, waste management, climate change, and preserving cultural heritage, the need for inclusive and sustainable urban development becomes increasingly important. In response, the United Nations established the Sustainable Development Goals (SDGs) as a global framework for promoting social progress, environmental protection, and economic development. Among these goals, Sustainable Development Goal 11 (SDG 11): Sustainable Cities and Communities emphasizes creating cities and human settlements that are inclusive, safe, resilient, and sustainable. This goal also highlights the shared responsibility of educational institutions, government agencies, and local communities in shaping sustainable environments for present and future generations.

This report compares the City College of Cagayan de Oro's (CCCDO) contributions to Sustainable Development Goal 11 (SDG 11): Sustainable Cities and Communities in 2024 and 2025. The 2024 institutional report presents a broad programmatic framework built around sustainability education and advocacy, cultural heritage, community outreach, research and innovation, and institutional partnerships. It records 26 activity and output examples across five categories, alongside reported participation and reach figures in selected programs.

The 2025 narrative provides a more activity-specific account of the College's continuing commitment to sustainable communities. It highlights campus earthquake drills, GREEN Learning Series sessions with WWF-Philippines and CLENRO, mangrove rehabilitation and coastal clean-up activities, participatory barangay research, the PNVSCA volunteerism partnership, extension capacity-building, grant-writing training, and participation in the Higalaay Festival. These initiatives connect the College's sustainability objectives with specific activities, dates, institutional partners, and measurable outputs, including the planting of 300 mangrove seedlings by 60 volunteers and the conduct of two earthquake preparedness drills.

The comparison highlights the continuity of CCCDO's sustainability priorities and the more activity-specific presentation of its initiatives in 2025. Environmental advocacy and community engagement were already established components of the 2024 framework. In 2025, these priorities were further demonstrated through environmental restoration, disaster preparedness, community consultation, capacity-building, and organized volunteerism involving institutional and community partners. These efforts contribute to the broader objectives of SDG 11 by promoting environmental responsibility, strengthening community resilience, encouraging local participation, and supporting the preservation of cultural identity.

The quantitative information in this report is interpreted according to the original meaning of each measure. The 2024 distribution chart represents activity and output examples across five categories, while participation figures refer to the number of people reached or barangays covered by selected programs. The 2025 figures refer to specific initiatives and are presented as indicators of implementation rather than a complete count of all annual activities or definitive evidence of long-term community outcomes. Together, these findings provide a

comparative view of CCCDO's continuing efforts to advance sustainable cities and communities through education, environmental action, cultural engagement, research, and institutional collaboration.

Key Findings

- The 2024 report categorized 26 activity/output examples across sustainability education, cultural heritage and environmental stewardship, community outreach, research and innovation, and institutional partnerships.
- The 2024 source reported 2,000 students and staff involved in sustainability education, 1,200 cultural-heritage attendees, and outreach reaching 3,000 residents across 15 barangays.
- The 2025 narrative documents two earthquake drills, GREEN Learning Series initiatives, Baybayani mangrove rehabilitation and coastal clean-up, BARANGAYAN participatory research, volunteerism capacity-building, and cultural participation in Higalaay.
- The 2025 source reports 300 mangrove seedlings planted with 60 volunteers during Baybayani 2.0, providing a concrete environmental output and participation count.
- The strongest evidence of progress is continuity combined with more specific, named 2025 implementation activities; the available counts do not establish a single percentage increase in the overall sustainability of Cagayan de Oro.

Institutional Context and SDG 11

SDG 11 aims to make cities and human settlements inclusive, safe, resilient, and sustainable. The goal connects urban life with disaster risk reduction, sound environmental management, participatory planning, the protection of cultural and natural heritage, and access to safe and inclusive public spaces. Higher education institutions can contribute through research, sustainability education, community extension, volunteerism, cultural engagement, and partnerships with local government and civil society.

For CCCDO, the institutional contribution described in the supplied reports extends beyond classroom instruction. The 2024 baseline links green education and sustainability advocacy with cultural heritage, disaster preparedness, community outreach, research, and collaboration. The 2025 narrative shows these functions being enacted through drills, training, consultation, environmental restoration, public volunteer activities, and city cultural events. The comparison therefore examines both the continuity of thematic priorities and the way they were expressed through specific programs in 2025.

2024 Baseline: A Broad Sustainability and Community Framework

Sustainability education and environmental advocacy

The 2024 report identifies the Green Campus Drive and Eco-Advocates Seminar Series as central parts of CCCDO's sustainability education. These initiatives were described as promoting waste management, responsible resource use, and energy conservation among students and staff. The report's activity distribution assigns this area eight activity/output counts, or 30.8% of the 26 counted examples, making it the largest category in the 2024 chart.

The reported reach was 2,000 students and staff. This indicates that sustainability education was presented as an institution-wide effort rather than a narrowly targeted activity. The report also connects education with practical engagement through tree planting, coastal clean-ups,

and zero-waste challenges. The significance is the integration of environmental learning with everyday campus practice and community participation.

Cultural heritage and environmental stewardship

The 2024 report describes collaboration with the City Tourism and Cultural Affairs Office to document and revitalize local heritage sites. The Cultural Heritage Month Symposium and City Stories Exhibition featured local artists, traditional crafts, and narratives associated with Cagayan de Oro's identity. This category accounted for six activity/output counts, or 23.1% of the reported distribution, and the report listed 1,200 attendees for the associated cultural events.

Cultural heritage is part of sustainable cities because communities are shaped not only by physical infrastructure but also by shared memory, place identity, traditional knowledge, and opportunities for people to participate in cultural life. The report's integration of heritage content into curricula and student organizations linked cultural appreciation with civic engagement.

Community outreach, safety, and urban resilience

The 2024 baseline describes the Safe Schools, Safe Communities program, public training on climate adaptation and disaster preparedness, and community-based early-warning systems. In collaboration with the City Disaster Risk Reduction and Management Department and barangay officials, the report describes participatory risk mapping and policy inputs for the city's Local Climate Change Action Plan. The 2024 program distribution includes five activity/output counts for community outreach and urban engagement.

The source reports outreach across 15 barangays, reaching 3,000 residents. This establishes the scale of the reported community engagement, while the focus on risk maps and local planning connects participation to the practical work of building safer settlements. It also demonstrates how student and faculty involvement can bring research and education into local government processes.

Research, innovation, and institutional partnerships

The 2024 SDG 11 report identifies six faculty projects under research and innovation, covering themes such as sustainable transportation, renewable energy use in local governance, and youth participation in urban climate adaptation. The source connects this work with curriculum integration and capacity-building. It also records five collaborations related to institutional partnerships, including DENR and CDRRMD river-mapping projects and work with the City Engineering Office and CHR-X.

Research helps sustainable development when it informs teaching, policy, planning, or community practice. Partnerships bring together the expertise and responsibilities of public agencies, academic institutions, and community organizations. In 2024, these two dimensions were described as supporting urban mapping, eco-friendly campus infrastructure, social inclusion, and science-based approaches to local development.

2025 Progress: Implementation Through Named Initiatives

Disaster preparedness and campus safety

CCCDO's 2025 narrative describes two earthquake preparedness activities. On June 19, the College conducted a comprehensive earthquake drill involving employees, students, and

guests. Participants practiced protective actions, evacuated to designated safe zones, and assembled for headcounts. The Health and Safety Officer and Health and Safety Committee coordinated the exercise, which also assessed evacuation procedures and response coordination. [8]

On September 11, CCCDO participated in the Third Quarter Nationwide Simultaneous Earthquake Drill, reported on September 18. Personnel practiced “Drop, Cover, and Hold On,” followed the buddy-buddy evacuation system, assembled at the covered court, and completed a headcount. The process reinforced preparedness for possible aftershocks and provided a structured opportunity to review campus safety procedures. [2]

Compared with the 2024 baseline’s emphasis on community disaster education, early-warning systems, participatory risk maps, and climate planning, the 2025 narrative makes campus emergency procedures especially visible. This is a complementary development: local resilience includes both longer-term risk planning and the practical ability of people within an institution to respond safely during an emergency.

Environmental leadership and GREEN Learning Series

CCCDO’s GREEN Learning Series Module 3 was conducted in partnership with WWF-Philippines and the City Local Environment and Natural Resources Office (CLENRO). The source describes sessions for barangay leaders, community volunteers, and solid-waste management stakeholders covering leadership, community visioning, and financial literacy. CCCDO personnel served as facilitators, connecting the institution’s teaching and extension expertise with community leadership development. [20]

The engagement also extended beyond Cagayan de Oro. In June 2025, CCCDO and WWF-Philippines conducted GREEN Learning Series sessions in Caloocan and Quezon City, bringing together barangay leaders, solid-waste management focal persons, and waste workers. The initiative was associated with WWF-Philippines’ No Plastics in Nature program and promoted inclusive, practical approaches to environmental responsibility. [7]

This expands the geographic and organizational reach visible in the narrative. In the 2024 report, sustainability education was concentrated in campus programs and local community engagement; the 2025 examples show the College sharing environmental leadership training with stakeholders in other cities. The contribution is not only awareness-raising: it also involves developing the planning and coordination capacities used by community leaders to organize local action.

Coastal protection and environmental restoration

Baybayani 2.0 was conducted in Barangay Pangayawan, Gitagum, Misamis Oriental, in collaboration with CLIMBS Life and General Insurance Cooperative and Kusgan Volunteers Inc. CCCDO’s report identifies 60 volunteers from CCCDO and CLIMBS and records 300 mangrove seedlings planted. [22]

This initiative offers one of the clearest quantitative outputs in the 2025 narrative. Mangrove restoration supports coastal habitats and can contribute to shoreline stability, sediment retention, and natural coastal protection. In the context of SDG 11, these ecological functions matter because safer and more resilient communities depend partly on the condition of surrounding natural systems. The reported seedling count shows the scale of the planting activity, while the volunteer figure reflects organized participation by institutional and partner-community members.

Baybayani 3.0 followed on April 22, 2025, in the Agusan coastal areas as part of Earth Day. CCCDO joined CLIMBS Cares, Plastik Republic, DENR Region X, Opol Community College, MASSPECC, CLENRO, Kusgan Volunteers Inc., the Bureau of Fire Protection, Coop NATCCO, and the Agusan Barangay Council. Faculty, staff, and NSTP student volunteers participated in the coastal clean-up and environmental awareness activities. [17, 18]

The 2024 report already described tree planting, coastal clean-ups, and zero-waste challenges as part of sustainability advocacy. The 2025 reporting moves this strand into named Baybayani activities and provides a specific mangrove planting count. The development is best understood as a continuation with greater activity-level detail and a clearer link between community volunteers, partner organizations, and place-based environmental action.

Participatory community planning and evidence-based development

BARANGAYAN 2025: Focus Group Discussion and Market Analysis Survey in Select Barangays gathered information on community needs and priorities. Led by the Extension and Outreach Office in partnership with selected barangays, the activity was intended to inform enterprise development, training programs, and research collaborations. [21]

The 2025 account also describes extension and community-development discussions emphasizing participatory action research, local knowledge, strategic project planning, and monitoring and evaluation. These practices complement the 2024 Safe Schools, Safe Communities program and its participatory risk mapping. Both approaches recognize that development plans are more useful when informed by local conditions and community experience.

The significance is institutional as well as local. Community consultations can help align extension initiatives with residents' priorities, while research and structured planning give local concerns a route into organized projects. This reflects a shift from describing community outreach mainly through reach and program areas toward documenting particular processes for gathering information and connecting it to plans for training and extension.

Volunteerism, institutional capacity, and partnerships

On September 4, CCCDO reported its formal partnership with the Philippine National Volunteer Service Coordinating Agency (PNVSCA). The Memorandum of Agreement had been signed on August 6, 2025, and established a basis for joint programs, training, and initiatives involving students, faculty, and local communities. Cagayan de Oro was also recognized as an active hub of volunteer service through the turnover of a PNVSCA Volunteerism Marker. [4]

The College also conducted the Advanced Capacity Development Training for Extensionists (ACES), with its first phase held on February 7 for teaching and non-teaching personnel. The program strengthened the institutional capacities involved in extension, community development, project planning, and outreach. [28] On October 2, CCCDO conducted a Grant Writing and Business Proposal Workshop for cluster partnership coordinators, helping participants develop skills in proposal preparation and project development. [1]

These activities complement the environmental projects. Volunteers make community action possible, while trained extension staff and partnership coordinators help organize activities, coordinate stakeholders, and formulate projects. The 2024 source already recorded five institutional collaborations, so partnership was an established foundation. The 2025 account

adds a formal volunteerism agreement and more specific capacity-building activities linked with the implementation of community programs.

Cultural identity and community belonging

CCCDO participated in the Higalaay Festival Civic Parade and Float Competition on August 27, 2025, with the event reported on August 28. The College's float highlighted institutional milestones, while students and staff presented their creativity and talents along the parade route. [6] The College also served on the board of judges for the festival's Streetdancing and Showdown Competition, which celebrated Kagay-anon traditions and cultural pride. [5]

This work continues the 2024 focus on cultural heritage through the City Stories Exhibition and Cultural Heritage Month Symposium. The form of engagement differs: the 2024 report emphasized heritage documentation, exhibitions, traditional crafts, and academic integration; the 2025 narrative highlights participation in a city-wide festival and recognition of local performance traditions. Both are relevant to sustainable communities because a sense of belonging and cultural continuity contributes to inclusive civic life.

Comparative Progress

The 2024 and 2025 reports show continuity across the same broad SDG 11 concerns, while the emphasis and documentation of individual activities develop over time. The 2024 report organized the institutional contribution by program area and supplied aggregate reach figures for selected activities. The 2025 narrative describes a sequence of identifiable events with dates, implementation steps, partners, and selected outputs. This allows the year-to-year story to move from a broad sustainability framework toward specific instances of implementation without treating each count as directly interchangeable.

Environmental stewardship is the clearest example of continuity and added detail. In 2024, Green Campus Drive, Eco-Advocates seminars, tree planting, coastal clean-ups, and zero-waste challenges were presented as a broad educational and advocacy program. In 2025, the College reports GREEN Learning Series activities, Baybayani mangrove rehabilitation, and a coastal clean-up conducted with numerous partner organizations. The 300 mangrove seedlings and 60 volunteers reported for Baybayani 2.0 make one part of this work more tangible in the annual narrative.

Safety and resilience also show complementary development. The 2024 baseline emphasized disaster-preparedness education, early-warning systems, participatory risk mapping, and policy inputs for local climate planning. In 2025, the source names two earthquake drills with protective procedures and evacuation practice. Risk planning and drills operate at different levels, but both contribute to a safer environment by building knowledge, coordination, and readiness among the people who live, study, work, and participate in community life.

Community participation is another persistent theme. The 2024 report recorded outreach to 3,000 residents in 15 barangays and described student-resident cooperation in risk mapping. The 2025 narrative describes barangay focus groups and market analysis, an agreement with PNVSCA, and capacity-building for extensionists and coordinators. These activities connect local knowledge with the organizational skills and partnerships needed to translate needs into projects.

Cultural participation is also maintained across the period. Heritage symposia and exhibitions in 2024 supported local history and cultural expression; Higalaay participation in 2025 placed the College within a wider civic celebration. In both years, cultural activity is not peripheral to

sustainability: it supports identity, participation, and a shared sense of place. Overall, the comparison indicates sustained institutional alignment with SDG 11 and more activity-specific reporting of selected 2025 initiatives.

Figures and Comparative Analysis

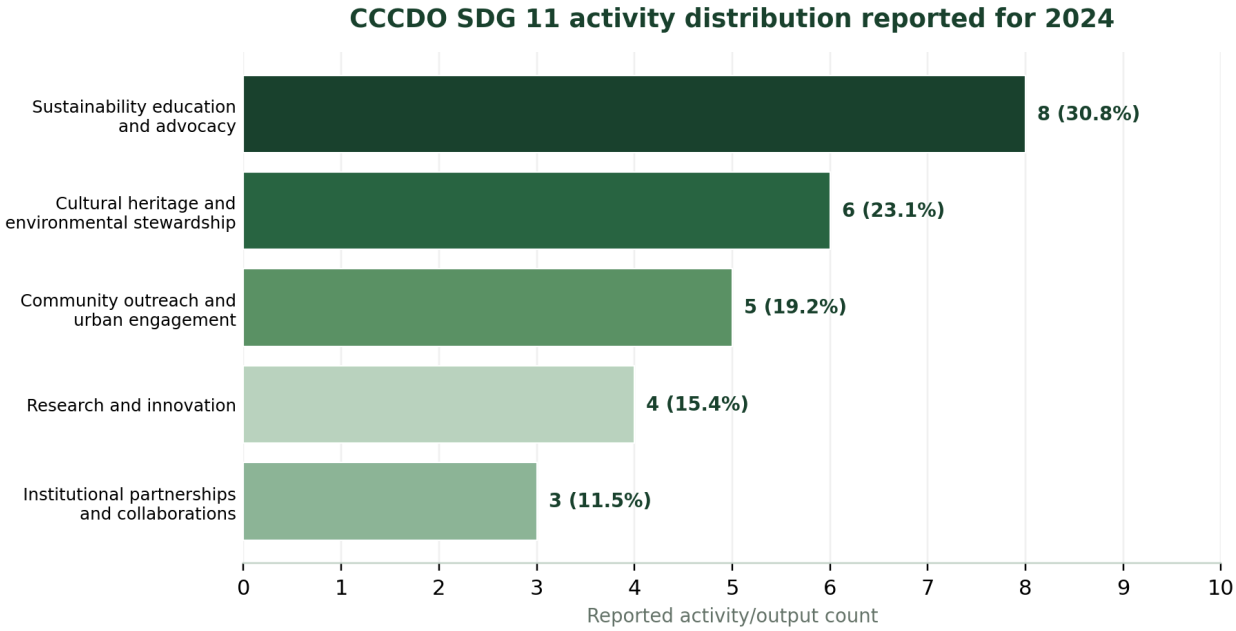

Figure 1. Distribution of 2024 SDG 11 activities/outputs by programmatic category, as reported in the institutional baseline.

Interpretation: Sustainability education and advocacy formed the largest category, with 8 of 26 counted activity/output examples (30.8%). Cultural heritage and environmental stewardship accounted for 6 (23.1%), community outreach and urban engagement for 5 (19.2%), research and innovation for 4 (15.4%), and institutional partnerships for 3 (11.5%). This distribution shows that CCCDO's 2024 portfolio was not limited to one kind of sustainability action. Education and advocacy were the most frequently represented category, while culture, community engagement, research, and partnerships formed complementary parts of the reported approach.

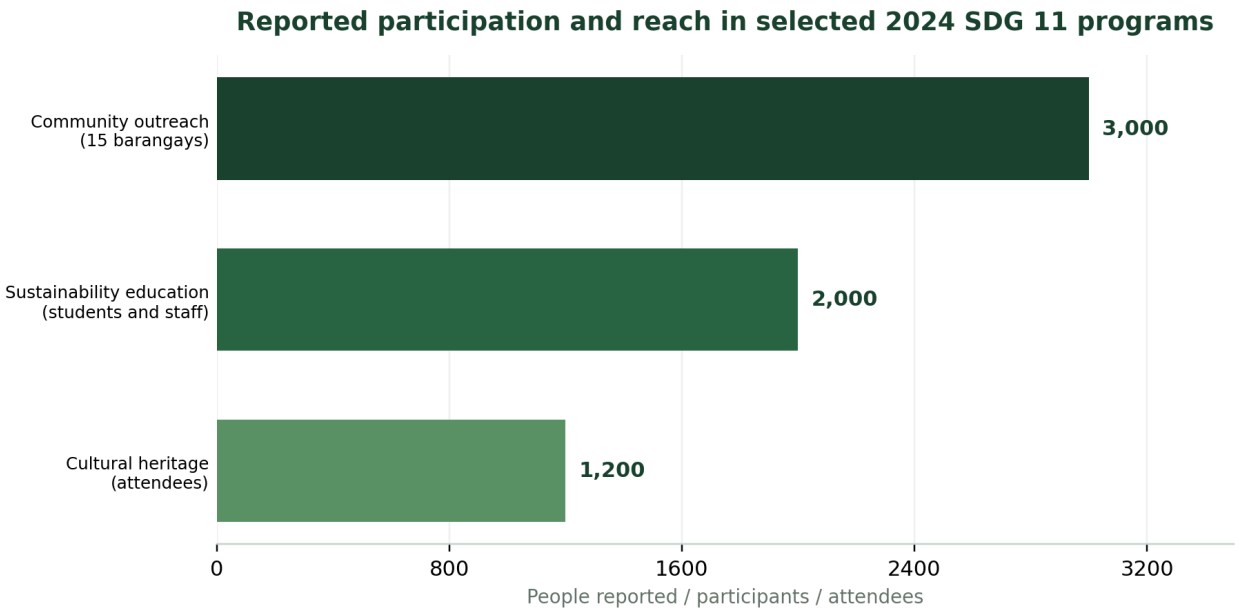

Figure 2. Participation and reach figures reported for selected 2024 programs. Categories are presented separately and should not be added as unique individuals.

Interpretation: The 2024 baseline reported 3,000 residents reached through community outreach across 15 barangays, 2,000 students and staff involved in sustainability education, and 1,200 attendees at cultural heritage events. These figures illustrate the different audiences CCCDO engaged. They are not a total unique headcount, because individuals could participate in more than one program and the categories refer to different activity types. The figures nevertheless show that the 2024 approach combined campus-focused education with community-facing outreach and cultural participation.

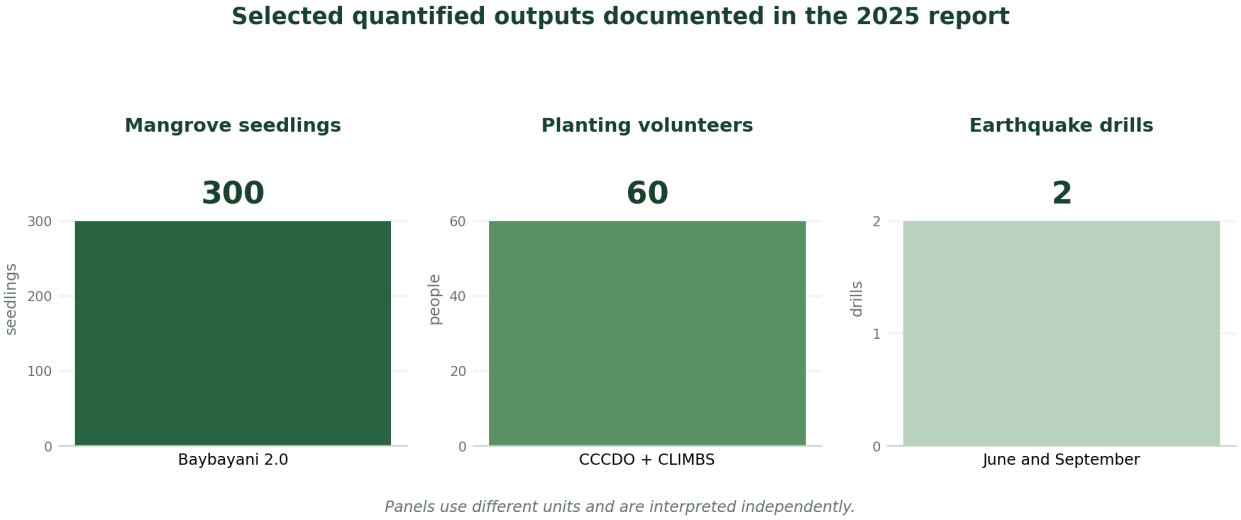

Figure 3. Selected quantified outputs documented in the 2025 narrative. Each panel uses a separate unit.

Interpretation: Baybayani 2.0 documented 300 mangrove seedlings planted with 60 volunteers, while the 2025 report also described two earthquake preparedness drills. These measures represent different kinds of output: planting quantity, participant count, and number of preparedness exercises. Their value lies in making selected parts of implementation visible. They should be interpreted independently and not combined into a single performance score.

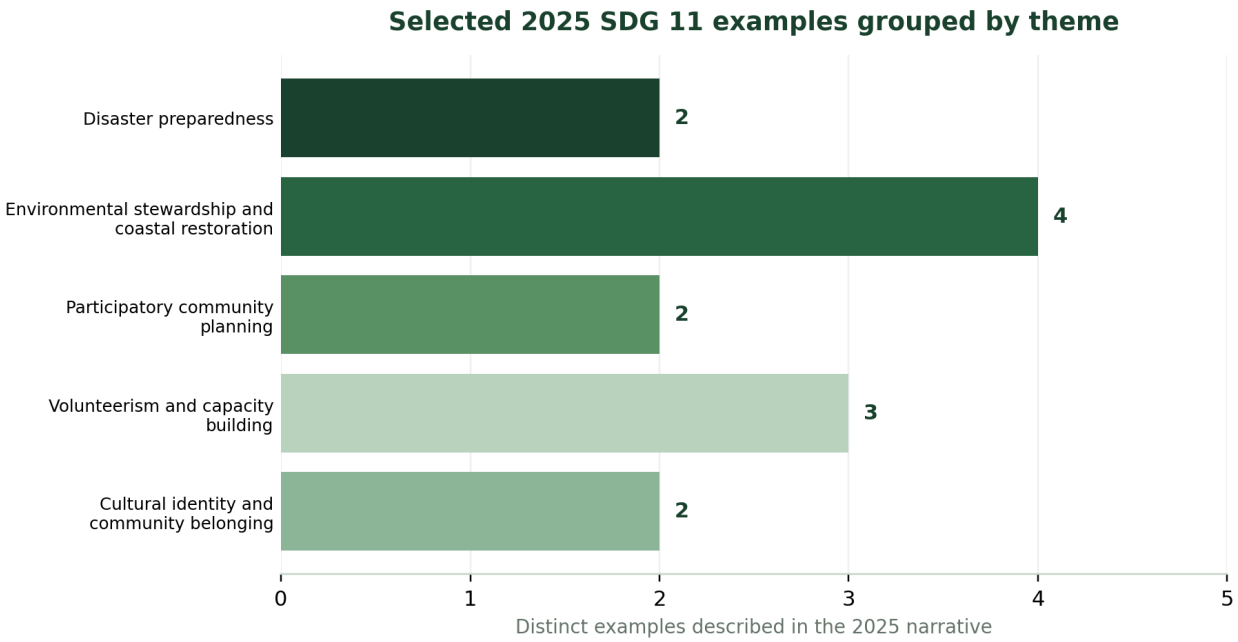

Figure 4. Descriptive inventory of distinct 2025 examples grouped by theme from the supplied narrative; not a total of all institutional activities.

Interpretation: The inventory includes two disaster-preparedness examples, four environmental stewardship or coastal-restoration examples, two participatory community-planning examples, three volunteerism/capacity-building examples, and two cultural-identity examples. This thematic view shows the breadth of the 2025 narrative: direct environmental action appeared alongside preparedness, community consultation, institutional capacity, and cultural participation. Counts reflect how examples were grouped for this comparison and are not official annual totals.

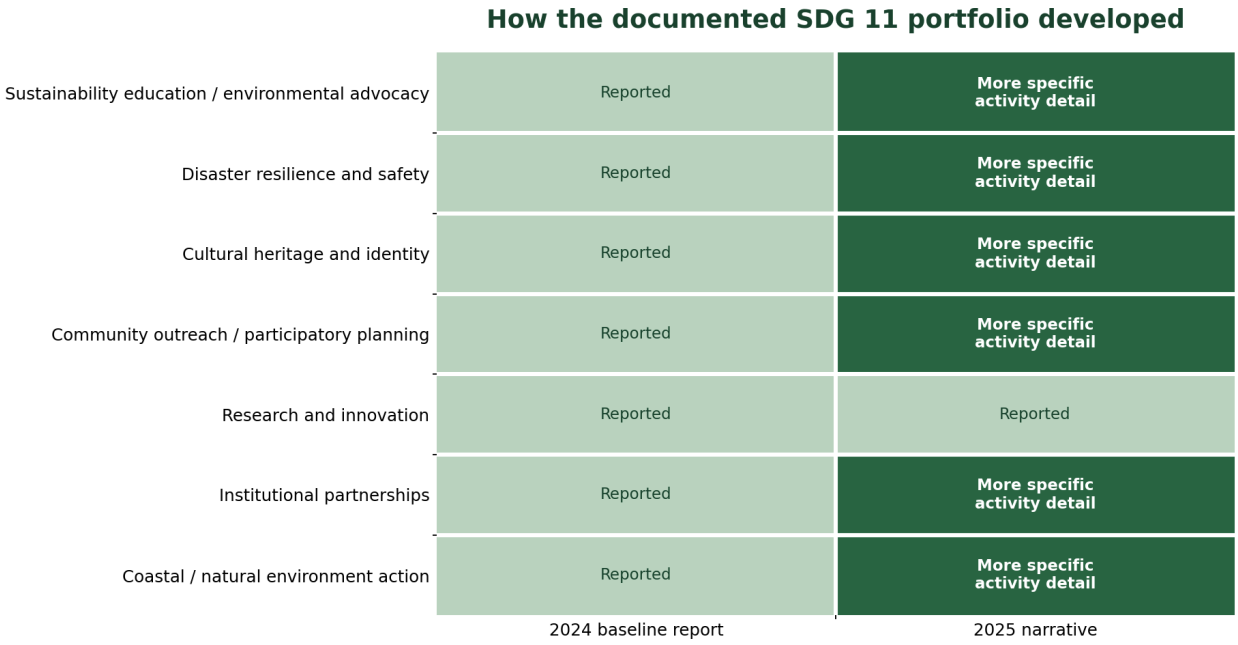

Figure 5. Comparative theme coverage based on the supplied 2024 report and 2025 narrative. Darker cells indicate that the 2025 account gives more activity-specific detail for the selected theme.

Interpretation: The matrix indicates continuity across the main themes: sustainability education, disaster resilience, cultural identity, community outreach, research, partnerships, and environmental action appear in both reporting periods. The visible difference is the level of detail in 2025 for particular activities, such as named earthquake drills, the planting count for Baybayani 2.0, the PNVSCA agreement, and the BARANGAYAN consultation process. The figure illustrates the development of reporting emphasis, not a quantified increase in impact.

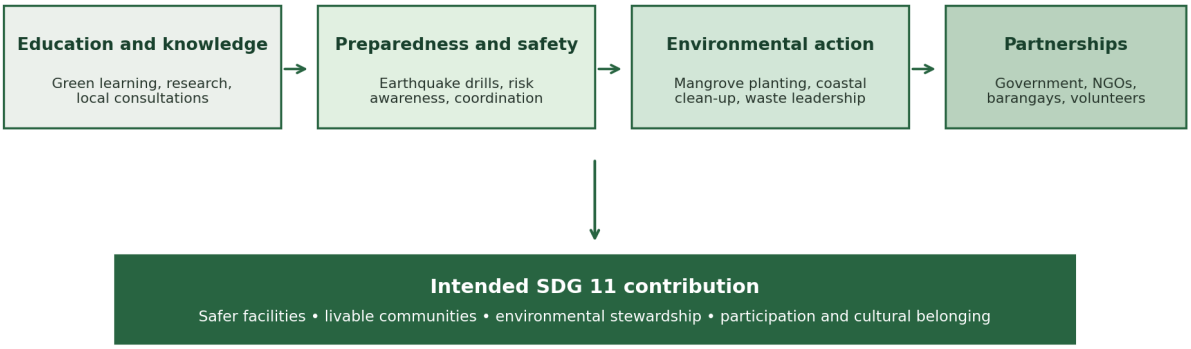

Figure 6. Conceptual pathway connecting education, safety practices, environmental action, and partnerships to intended SDG 11 contributions.

Interpretation: The diagram summarizes how CCCDO's different types of activity can reinforce one another. Education and local knowledge support understanding and planning; safety exercises build familiarity with emergency procedures; environmental action gives communities practical ways to care for shared places; and partnerships coordinate people and expertise. Together, these pathways are relevant to safer, more resilient, environmentally responsible, and culturally connected communities. The diagram explains the logic of the contribution rather than reporting a measured outcome.

Comparative Performance Summary

Dimension	2024 baseline	2025 development	Why the change matters
Sustainability education	Green Campus Drive and Eco-Advocates Seminar Series; 2,000 students and staff reported.	GREEN Learning Series with WWF-Philippines and CLENRO; sessions for barangay leaders, volunteers, and solid-waste stakeholders in CDO and other cities.	Moves sustainability learning across campus and community settings, connecting awareness with leadership and local implementation.

Dimension	2024 baseline	2025 development	Why the change matters
Environmental action	Tree planting, coastal clean-ups, zero-waste challenges, and broad environmental advocacy.	Baybayani 2.0 planted 300 mangrove seedlings with 60 volunteers; Baybayani 3.0 convened a multi-organization coastal clean-up.	Adds specific activity-level outputs to a pre-existing environmental stewardship theme and strengthens shared responsibility.
Disaster safety and resilience	Safe Schools, Safe Communities, climate adaptation training, early-warning systems, and participatory risk mapping; outreach covered 15 barangays.	Two earthquake drills with protective actions, evacuation routes, assembly, and headcounts.	Complements longer-term risk awareness and planning with practical rehearsal of campus emergency procedures.
Community planning	Risk maps, community outreach, and research inputs to local climate planning.	BARANGAYAN 2025 focus groups and market analysis gathered local needs to inform training, enterprise development, and research.	Makes community priorities more explicit in the process of shaping extension and development work.
Partnerships and volunteerism	Five institutional collaborations reported, including DENR and CDRRMD mapping work.	Formal PNVSCA volunteerism agreement; collaboration with WWF-Philippines, CLENRO, CLIMBS, Kusgan Volunteers Inc., and local/civic partners.	Shows how institutional relationships can organize volunteer participation, share knowledge, and support activity implementation.
Cultural heritage and identity	City Stories Exhibition and Cultural Heritage Month Symposium; 1,200 attendees reported.	Higalaay Festival civic parade participation and judging of the streetdancing/showdown competition.	Continues cultural engagement through a different public platform, helping strengthen civic identity and community belonging.

Dimension	2024 baseline	2025 development	Why the change matters
Research and innovation	Six faculty projects on urban resilience, renewable energy, and youth participation in climate adaptation; research consortia listed.	BARANGAYAN market analysis, extension planning, and GREEN Learning Series connect information gathering and applied knowledge with community practice.	Extends the role of institutional knowledge from research themes toward local consultation and program design.

Alignment with SDG 11 Priorities

The reported activities align with multiple dimensions of SDG 11. The connection is described below as a relationship between institutional activities and the purpose of each theme, rather than as a claim that a global indicator has been measured directly.

SDG 11 priority	2024 examples	2025 examples	Institutional contribution
Sustainable and inclusive learning environments	Green Campus Drive and Eco-Advocates Seminar Series.	GREEN Learning Series and environmental leadership training.	Strengthens environmental literacy and the capacity to organize community-level action.
Disaster risk reduction and resilience	Safe Schools, Safe Communities; climate adaptation and early-warning training; participatory risk maps.	June and September earthquake drills, evacuation procedures, and headcounts.	Connects planning and risk awareness with operational readiness for emergencies.
Environmental quality and waste management	Tree planting, coastal clean-ups, zero-waste challenges, river mapping.	Baybayani mangrove rehabilitation and coastal clean-up; solid-waste leadership sessions.	Supports environmental stewardship and care for natural systems that contribute to livable communities.
Cultural and natural heritage	City Stories Exhibition, Cultural Heritage Month Symposium, local heritage documentation.	Higalaay civic parade and streetdancing/showdown participation.	Promotes cultural expression, local identity, and participation in public community life.

SDG 11 priority	2024 examples	2025 examples	Institutional contribution
Participatory planning and local cooperation	Barangay outreach, community mapping, city climate action plan inputs, five partnerships.	BARANGAYAN focus groups, PNVSCA volunteerism partnership, and multi-sector environmental collaborations.	Connects local knowledge and institutional capability with shared community priorities.

Institutional Synergy and Community Value

The comparison shows that CCCDO's SDG 11 contribution is strongest when education, community participation, practical activities, and partnerships are viewed together. In 2024, the reported portfolio set out a broad framework across environmental education, cultural preservation, outreach, research, and institutional collaboration. In 2025, individual projects illustrate how these functions can intersect: the GREEN Learning Series combines education with community leadership; Baybayani links student and volunteer participation with coastal restoration; BARANGAYAN connects community listening with extension planning; and PNVSCA provides a formal structure for volunteerism.

This combination matters because sustainable cities are shaped through systems and relationships, not by isolated activities alone. Preparedness depends on practiced procedures and coordination. Environmental stewardship depends on local knowledge, organized action, and ongoing participation. Cultural sustainability depends on spaces where heritage and identity are shared. Community planning depends on institutions listening to residents and working with public agencies and civic partners.

The reported reach figures from 2024 and the selected output counts from 2025 illuminate different parts of this system. The 2024 figures show the scale at which some programs engaged residents, students, and cultural audiences. The 2025 figures make selected activities easier to visualize at the level of implementation. Taken together, the materials show continuity in institutional purpose and a more activity-specific account of implementation during 2025.

Conclusion

CCCDO's 2024–2025 SDG 11 record presents an institutional approach to sustainable cities and communities that connects sustainability education, cultural heritage, disaster resilience, community outreach, research, and partnerships. The 2024 baseline described a broad portfolio, including 26 activity/output examples across five programmatic categories, a reported reach of 3,000 residents across 15 barangays, 2,000 students and staff involved in sustainability education, and 1,200 cultural event attendees.

The 2025 narrative shows these priorities being expressed through named and dated initiatives, including two earthquake drills, GREEN Learning Series sessions with WWF-Philippines and CLENRO, Baybayani coastal and mangrove initiatives, participatory community surveys, extension capacity-building, a formal PNVSCA volunteerism agreement, and Higalaay Festival participation. The report records 300 mangrove seedlings planted by 60 volunteers during Baybayani 2.0, among the clearest quantified outputs for the year.

The central comparison is one of continuity and more specific implementation detail. CCCDO's reported work remained connected to the same broad dimensions of SDG 11 while the 2025 narrative made selected activities, partners, and immediate outputs more visible. These initiatives matter because safer facilities, healthy environments, inclusive planning, cultural belonging, and civic participation are interconnected foundations of sustainable communities.
