

SDG PROGRESS REPORT 1

Figure 2. Comparison of published graduation counts

June counts decreased by 9 and December counts by 35. Together, the two published ceremonies recorded 44 fewer graduates in 2025, equivalent to a 5.15 percent decrease from the 2024 combined count. The change does not establish a fall in completion rates or explain its cause; matched enrollment and cohort records would be needed. [1–4]

Comparative Training Outputs

Table 1 compares the two published graduation ceremonies in each year. The 2024 sources identify 419 graduates in the first and second quarters and 436 in the third and fourth quarters. The 2025 sources report June and December ceremony totals. The comparison therefore concerns the published ceremony series; it is not a verified comparison of deduplicated annual enrollment or annual completion rates. [1–4]

Table 1. Comparative Graduation Counts for 2024 and 2025

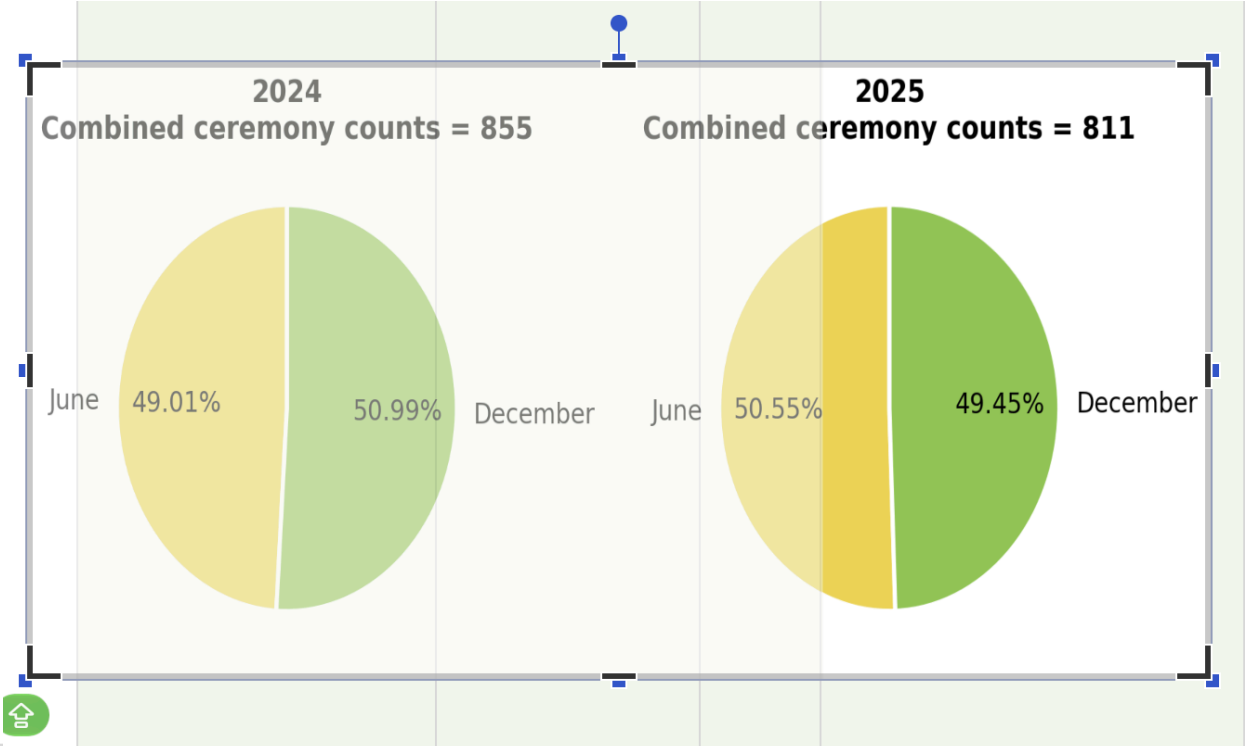

Published ceremony series	2024	2025	Change
June ceremony	419	410	−9 (−2.15%)
December ceremony	436	401	−35 (−8.03%)
Sum of the two ceremony counts	855	811	−44 (−5.15%)

Calculation: percentage change = (2025 count − 2024 count) ÷ 2024 count × 100. Percentages are calculated from the published integers and rounded to two decimal places; they are not estimates of beneficiary reach.

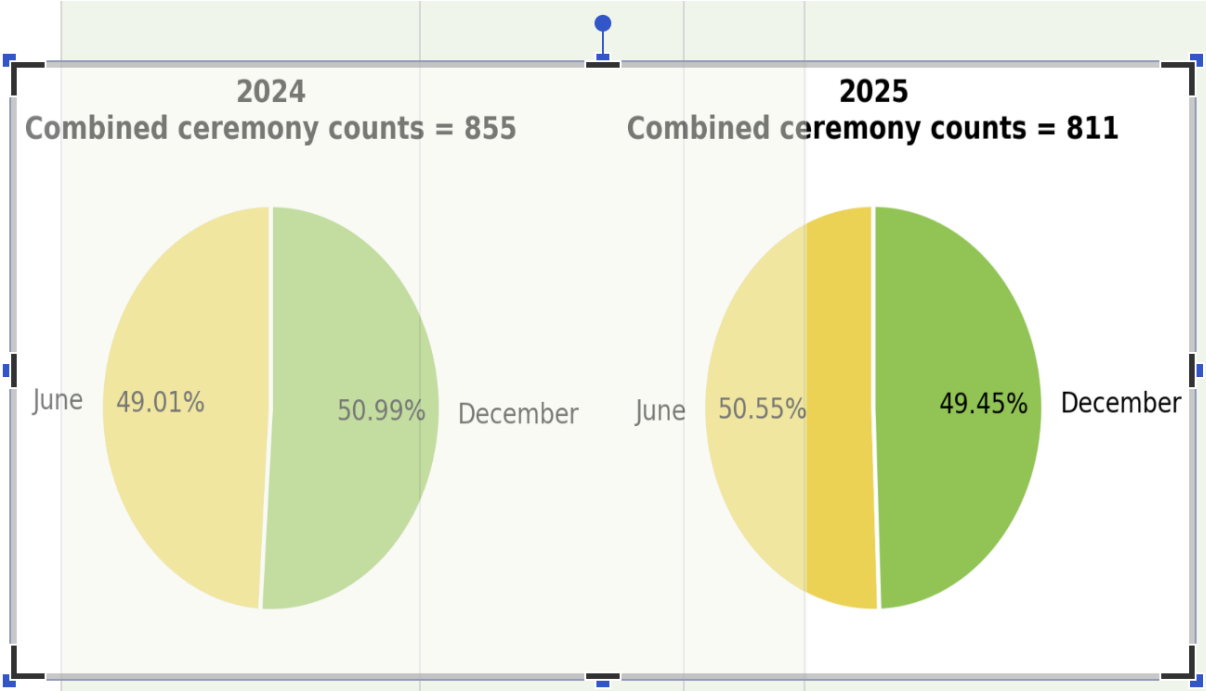

The observed decrease means the report should not claim an increase in graduate volume. Nor does it establish poorer program effectiveness: the publications do not supply matched enrollment denominators, cohort characteristics, or an explanation for the change. Completion rates and causes of the decrease therefore remain undetermined.

Documented program outputs in 2025

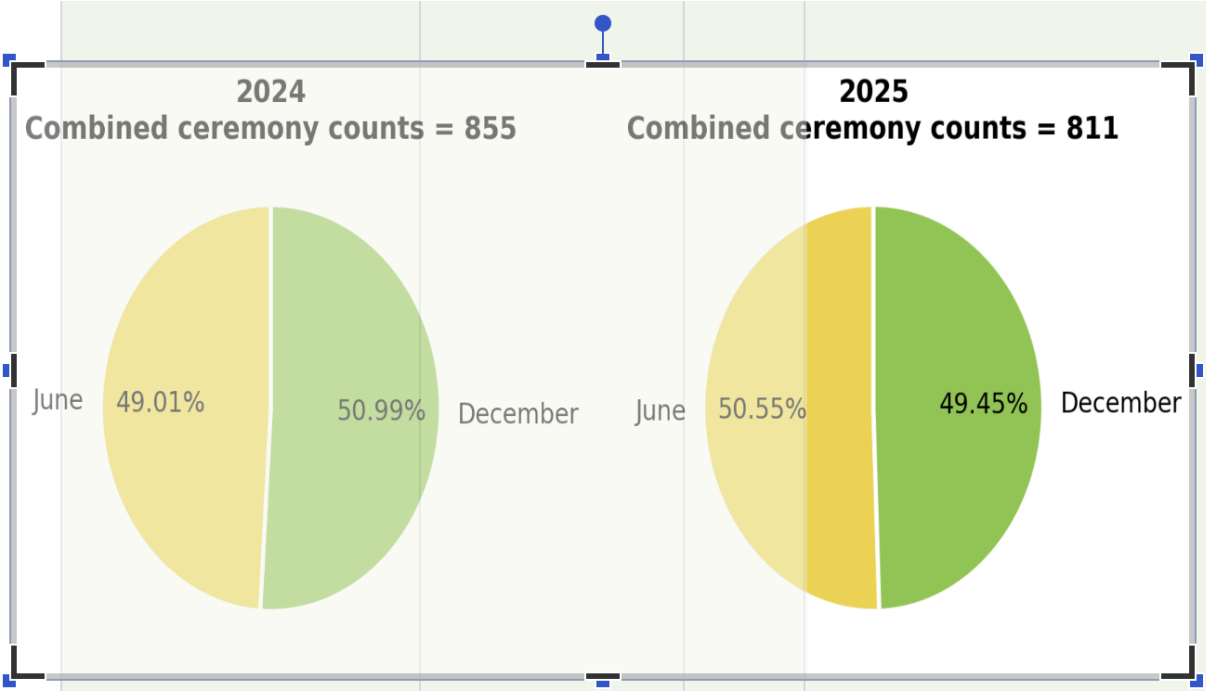

Table 2. Distribution of documented 2025 training completions

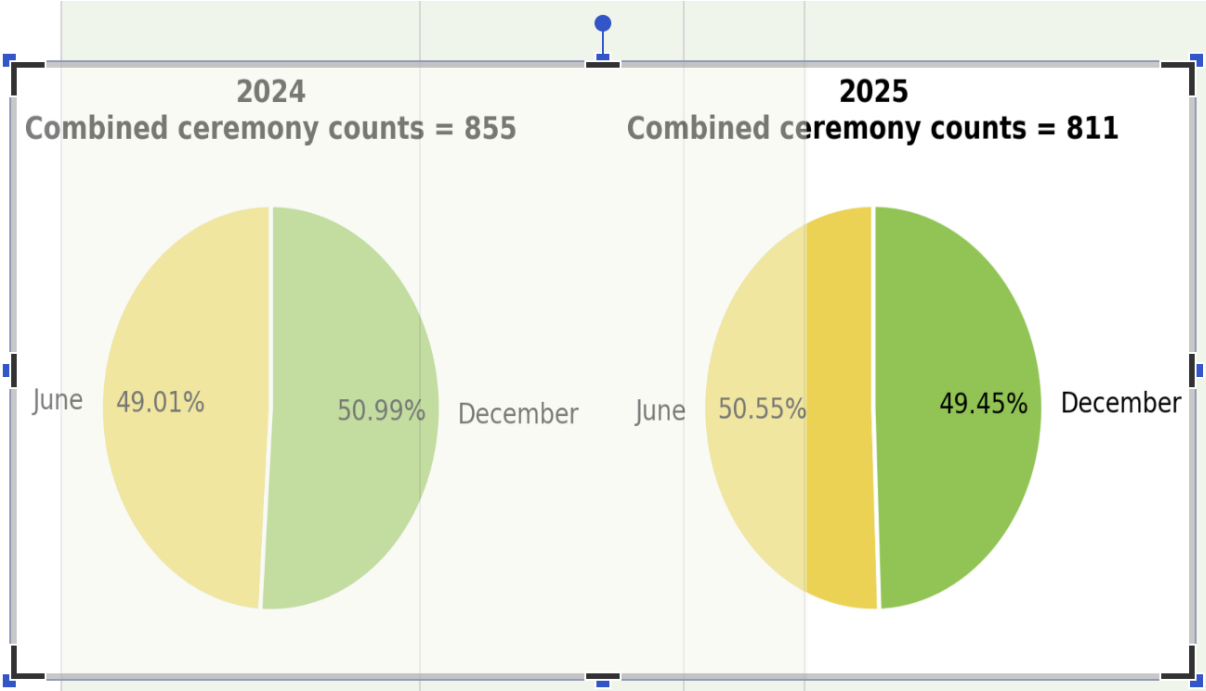

Qualification	June	December	Combined counts
Housekeeping NC II	112	107	219
Shielded Metal Arc Welding NC I	63	64	127
Shielded Metal Arc Welding NC II	48	31	79
Electrical Installation and Maintenance NC II	123	111	234
Carpentry NC II	Not listed	11	11
Plumbing NC I	14	26	40
Barangay Health Services NC II	50	51	101
Reported totals	410		811**SDG Progress Report for No Poverty** **Executive Assessment** City College of Cagayan de Oro continued to support access to education, vocational preparation, and livelihood opportunities in 2025. The reviewed institutional publications

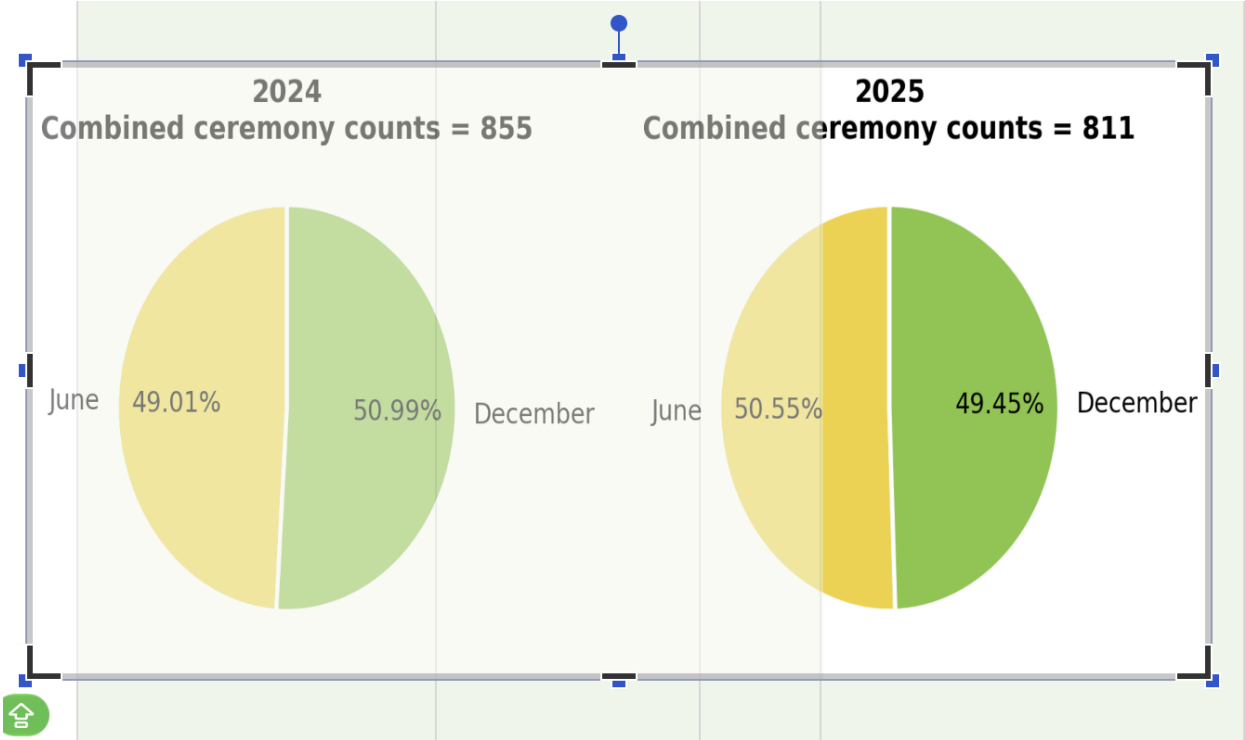

Qualification	June	December	Combined counts
			document 410 graduates at the June 2025 TSTI ceremony and 401 at the December ceremony. Their combined reported count is 811, compared with 855 across the two corresponding ceremonies in 2024. This represents 44 fewer reported graduates, or a 5.15 percent decrease in ceremony counts. These figures describe training outputs; they do not establish the number of unique low-income beneficiaries, or people lifted out of poverty. [1–4] Progress is also documented through the continuation of the Pilipinas Shell Foundation Inc. partnership, assistance toward training and assessment costs, and educational outreach through Klarex nga Serbisyo sa Baryo. The evidence

Qualification	June	December	Combined counts
			supports continued implementation of pathways relevant to SDG 1. It does not yet support a quantified improvement in household income or a measured reduction in poverty. [7–10] **Scope and Evidence** The reporting period is January 1 to December 31, 2025, with 2024 as the comparison year. This update uses the supplied Word report as the prior narrative and official college publications as the principal evidence. The ranking attribution is checked against a college-authored Philippine Information Agency release. Sources were reviewed on October 22, 2026. Publication dates and activity dates are

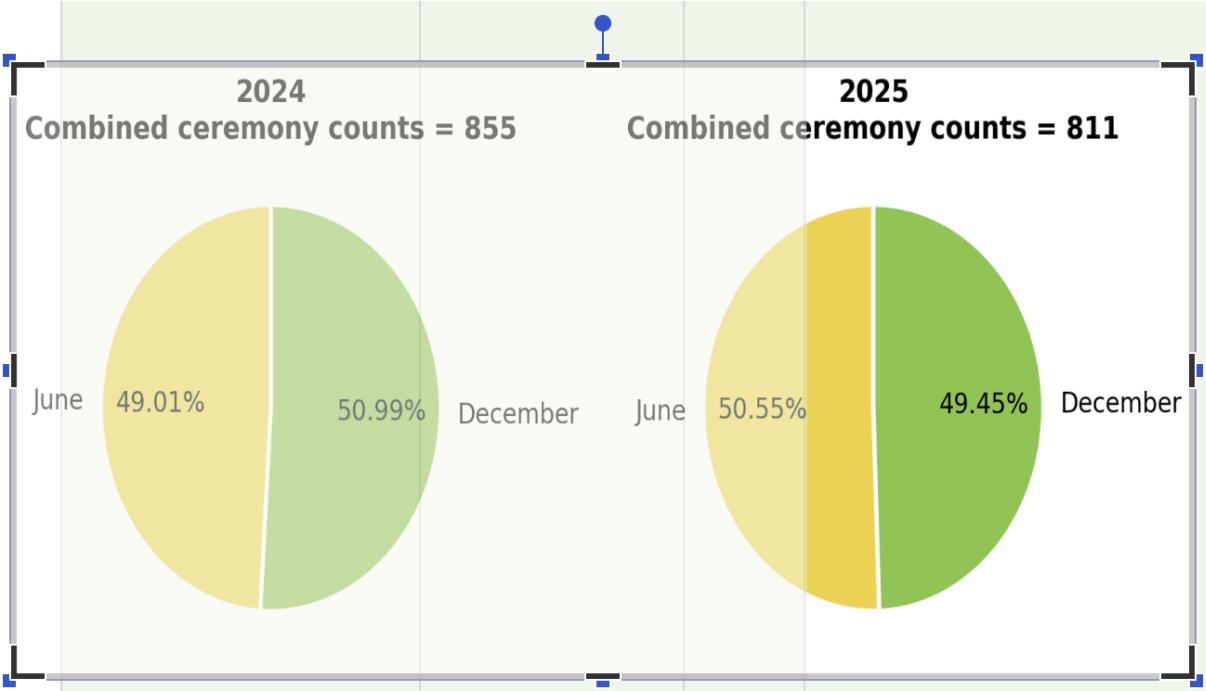

Qualification	June	December	Combined counts
			distinguished where available. [1–11] All counts retain their original units: scholarship slots, ceremony graduates, participating residents, or scholars. They are not combined into a single beneficiary total. Missing values are reported as not established in the reviewed sources, rather than zero. The analysis does not use population estimates, projected income gains, or imputed scholarship expenditures. Calculated differences are explicitly identified. The college's 2025 outreach article describes its reach as approximately 291 residents. Because the source itself notes that figure is approximate, it is excluded

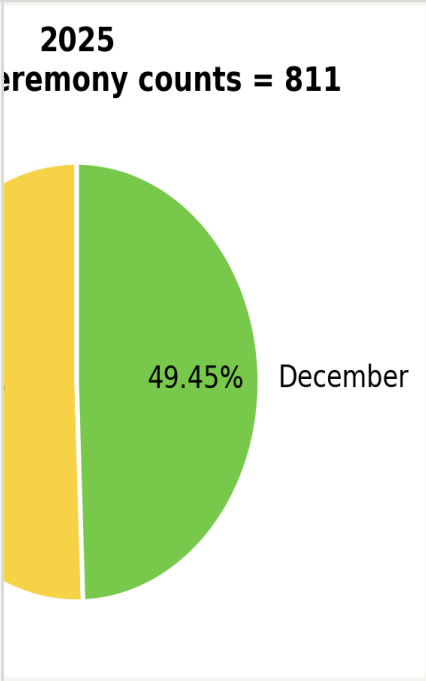

Qualification	June	December	Combined counts
			from exact numerical comparisons. The activity remains valid qualitative evidence of outreach. [10]

Distribution of documented training outputs

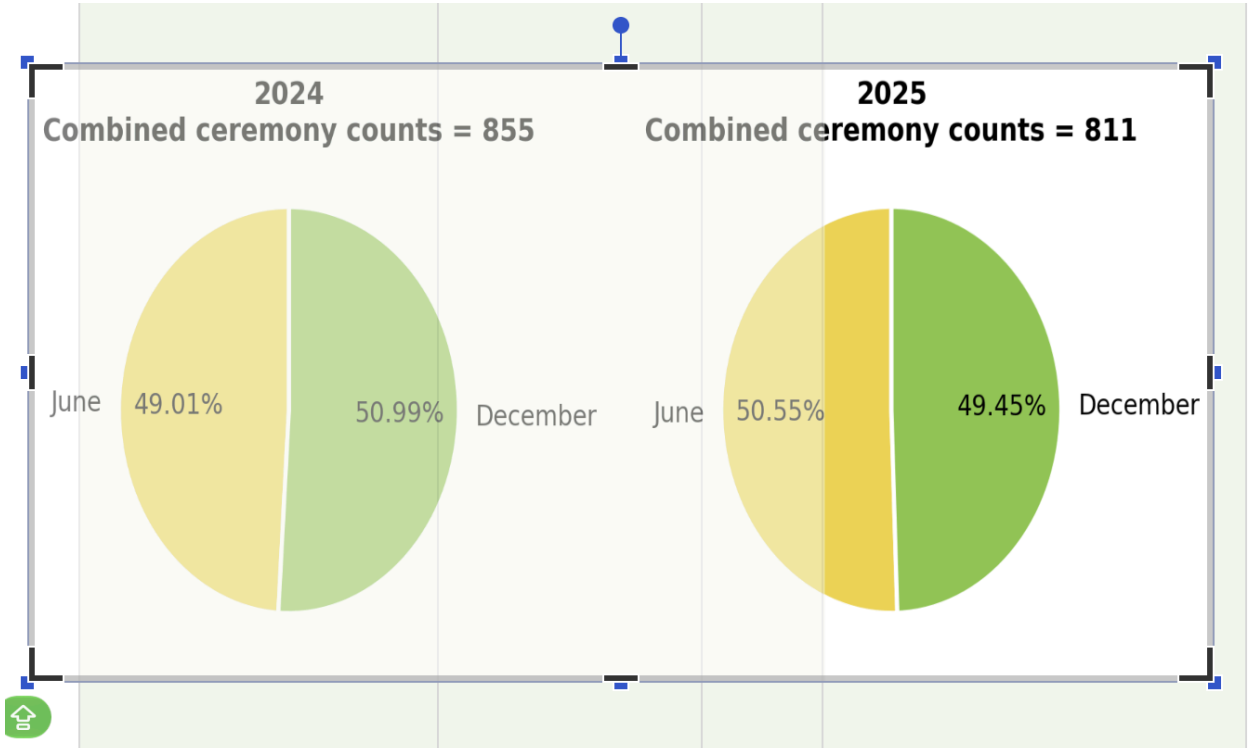

Figure 1. Share of June and December ceremony counts in each year

Qualification	June	December	Combined counts

Sources: June and December 2025 graduation articles [3–4]. Combined counts are arithmetic sums. Carpentry was not listed in the June breakdown; the combined value uses only December's reported 11. These are reported training completions, not verified national certification passes or employment placements. These sources do not establish all graduates as low-income.

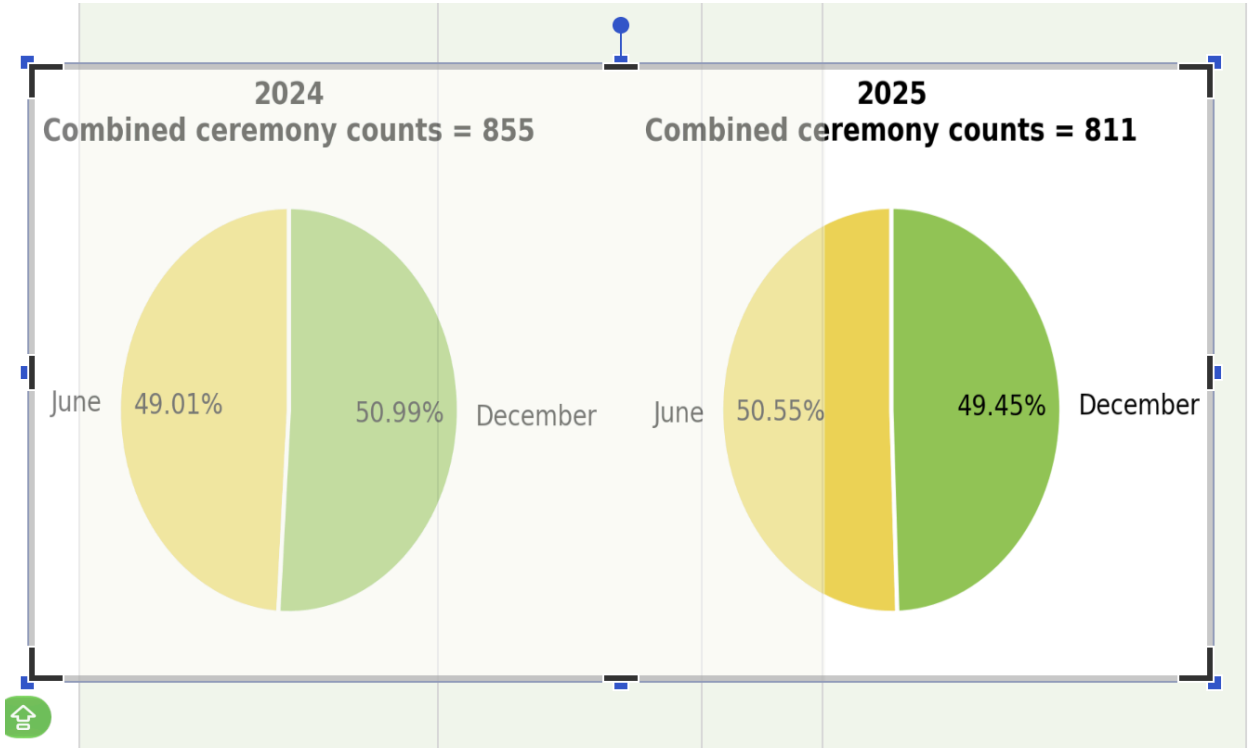

Scholarship support and community access

Table 3. Scholarship and community program comparison

Initiative	2024 evidence	2025 evidence	Comparison
TESDA TWSP	₱900,548 funding and two batches of 22 slots [5].	No matched 2025 grant amount or slot count established in this review.	Financial or beneficiary growth cannot be calculated.
Pigs and welding outreach	25 residents attended lecture and skills demonstration on April 20 [6].	KSB education promotion and enrollment assistance reported in 2025 [10].	Different services and counting bases; no participant growth calculation.
PSFI SKIL partnership	MOA signed July 25 for 38 youth [7].	February update reports 38 youth supported since the 2024 partnership; November event recognizes 24 EIM NC II scholars [8–9].	Continuation and a later qualification cohort are documented. Counts are not additive.

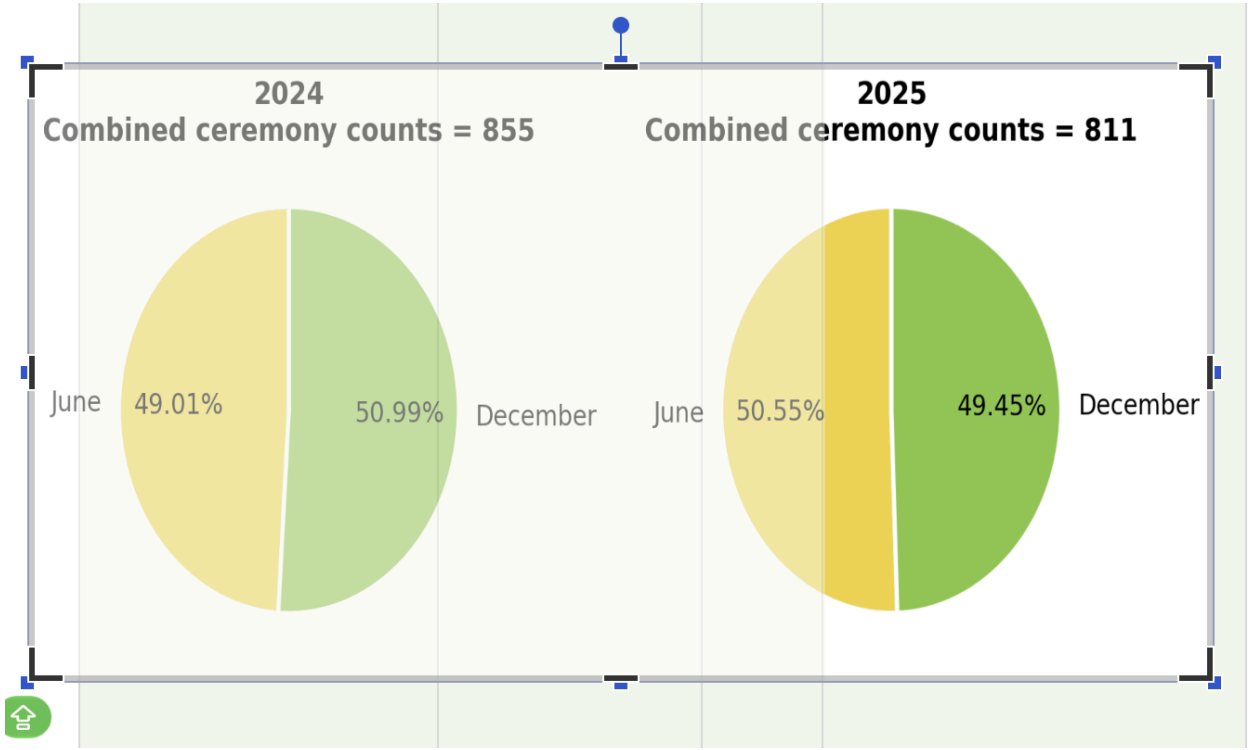

The 2024 TWSP publication establishes funding and scholarship capacity, rather than the final number of completers. Accordingly, the earlier report's 69 beneficiaries is not retained as a verified unique total: it combined 44 scholarship slots with 25 outreach participants without completion or overlap checks. The ₱900,548 is retained only as a 2024 funding figure. [5–6]

The SKIL comparison shows a shift from a formal partnership in 2024 to reported support delivery and subsequent scholar recognition in 2025. The February update describes assistance for consumables, supervised industry learning allowances, and assessment fees, alongside employment support. It reports placements for several scholars without giving an exact numerator or denominator. No placement rate is therefore calculated. [7–8]

The November 6, 2025 culmination event, reported in December, recognized 24 EIM NC II SKIL scholars. This is evidence of a specified supported cohort; the article does not establish that all 24 passed national assessment or secured employment. Its relationship to the earlier 38 is not resolved, so neither a total of 62 nor a percentage increase is reported. [9]

The 2025 KSB article describes flyers, enrollment information, and on-site assistance across Canitoan, San Simon, Lapasan, Patag, Pagatpat, and Balubal. This documents educational access outreach. It should not be represented as the same service as the 2024 Pigsag-an welding session. [10]

The clearest contribution to SDG 1 is the provision of educational and vocational pathways that may help people access livelihoods while reducing certain training-related costs. The graduation series documents continued delivery at scale; scholarship and community publications describe mechanisms for access. Evidence of training outputs supports a contribution pathway, but the reviewed articles do not isolate the poverty status of all participants or demonstrate a causal change in their economic circumstances.

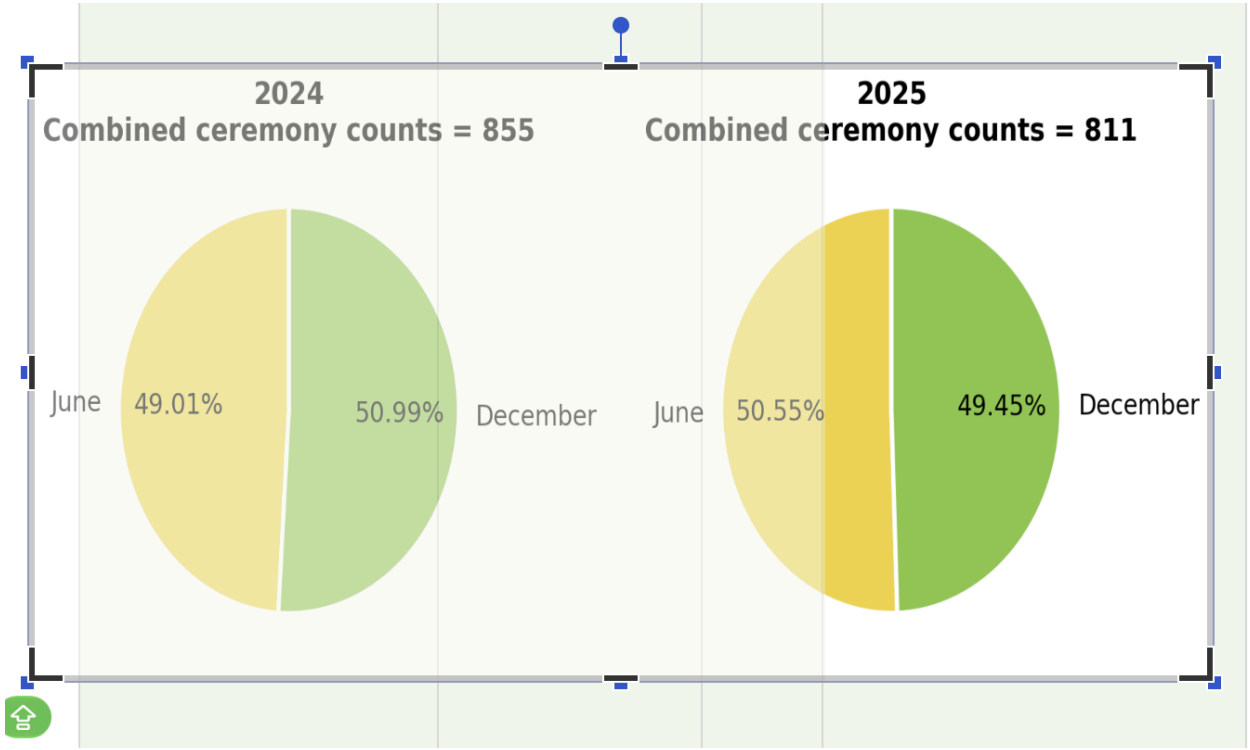

CCCDO placed in the 201–300 band for SDG 1 in the 2025 Times Higher Education Impact Rankings. The previous report's attribution of that band to WURI is corrected here. This is a ranking published in 2025; it is not treated as a direct measurement of outcomes generated during calendar year 2025. [11]

The original report's research workshop and consortium references are not carried forward as measured poverty outcomes. Research coordination may support future interventions, but a workshop, partnership, or recognition alone does not establish increased income, employment, or household movement above a poverty threshold.

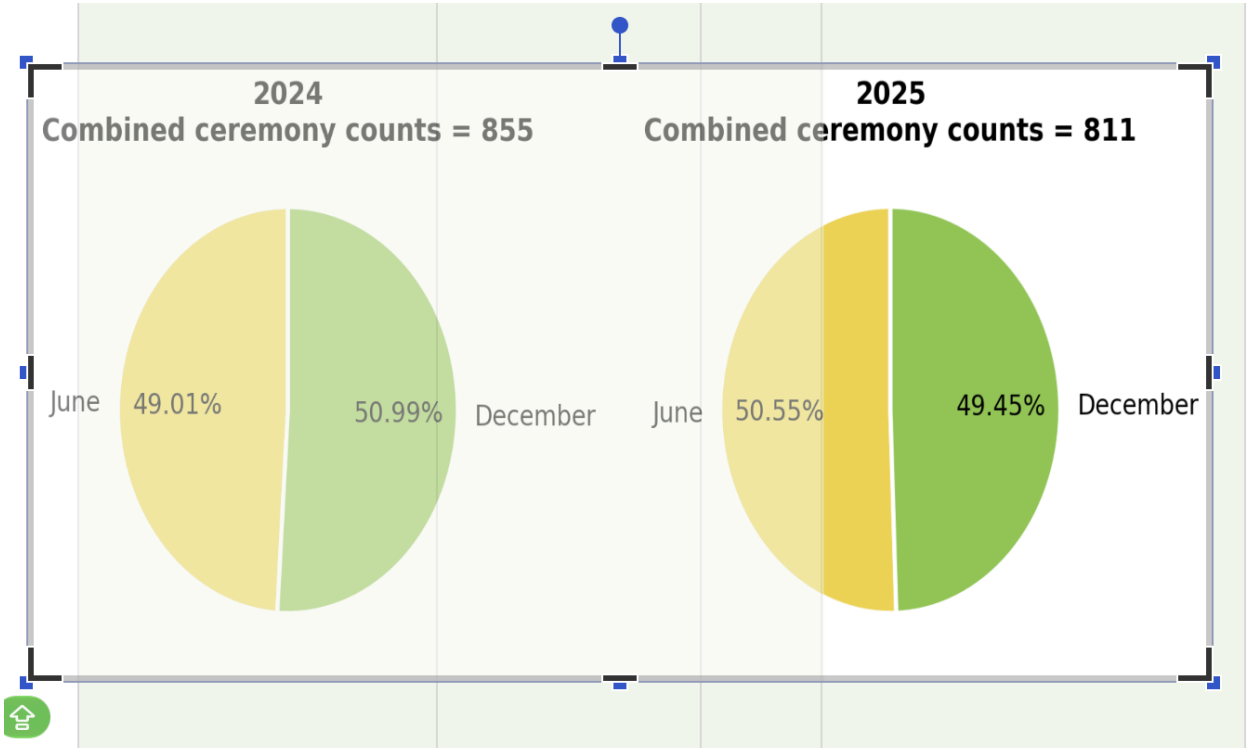

Publications for 2025:

Conclusion

The 2025 evidence documents sustained vocational education, continuing partner support, and community information services relevant to SDG 1. The published ceremony count decreased from 855 in 2024 to 811 in 2025. Partnership updates provide additional evidence of support delivery, but their beneficiary counts cannot be combined with graduation totals. The defensible conclusion is continued institutional contribution to skills

and educational access, with direct poverty reduction and income outcomes remaining unquantified in the reviewed evidence.

Sources and verification notes

Numbered references identify the sources for the preceding claims. All URLs are official CCCDO pages except reference 11, a CCCDO-authored release published by the Philippine Information Agency. Some pages returned incomplete content on direct retrieval; their article text was available through search-indexed results. Source figures remain institutional reports rather than an independent audit.
