SDG 5: GENDER-EQUALITY PROGRESS REPORT

Sustainable Development Goal 5 (SDG 5) aims to achieve gender equality and empower all women and girls. It recognizes that equality requires more than providing the same opportunities to everyone. It also involves addressing discrimination, removing barriers to participation, protecting individuals from harassment, and ensuring that people can access education, services, leadership opportunities, and institutional support fairly.

In higher education, gender equality can be promoted through gender-responsive education, inclusive campus activities, fair access to academic opportunities, non-discrimination policies, safe reporting mechanisms, and programs that respect the dignity of every member of the academic community. Colleges can also contribute by training personnel to recognize gender-related concerns and by incorporating inclusion into their community extension programs, partnerships, and institutional planning.

The City College of Cagayan de Oro (CCCDO) documented two major initiatives under SDG 5 in its 2024 report: the “Kaya’t Kaya: Gender and Sex Education in the Workplace” symposium for Technical-Vocational (Tech-Voc) trainees and the HIUSA Sports League / Intramural Games 2024. The first initiative focused directly on gender and sex education, while the second provided a campus setting in which participation, teamwork, and inclusion could be promoted through sports and student activities.

In 2025, the institution conducted a broader range of institutional initiatives, including capacity development for extensionists, freshmen enrollment, National Service Training Program (NSTP) activities, grant-writing training, institutional collaboration, and participation in an international conference on generative artificial intelligence (GenAI) and education. These activities have different primary purposes, but some could provide opportunities to integrate gender-responsive practices into the College's academic, administrative, and community engagement functions.

This Progress Report examines how CCCDO's documented SDG 5-related activities differed between 2024 and 2025. It considers the direct contributions of the identified initiatives, the possible institutional mechanisms through which broader activities could support gender equality, and the evidence needed to determine whether these efforts produced measurable results.

It also distinguishes between documented activities, potential contributions, and verified outcomes. This distinction is important because the existence of an activity does not automatically establish that gender equality improved. Demonstrating progress requires evidence that initiatives reached their intended participants, addressed relevant barriers, and contributed to changes in awareness, participation, safety, access, or institutional practice.

Executive Assessment

The available evidence indicates that CCCDO's 2024 SDG 5 report emphasized two visible initiatives: gender and sex education for Tech-Voc trainees and the HIUSA Sports League / Intramural Games. These activities addressed two important dimensions of gender equality: awareness and participation.

The “Kaya’t Kaya” symposium provided a learning opportunity through which trainees could better understand gender and sex concepts and relate them to their experiences. With support from the City Health Office, the activity connected gender education to workplace preparation and respectful professional relationships.

Meanwhile, the HIUSA Sports League / Intramural Games created an institutional setting where students from different academic programs could participate in sports and related activities. The inclusion of men's and women's divisions and the Mr. and Ms. Intramurals event made gender representation visible within campus life. However, separate divisions and the presence of male and female participants do not, by themselves, establish that all students had equal access to facilities, resources, leadership, or competition opportunities.

The 2024 report assigned 50% of its stated SDG 5 contribution to each initiative. This equal allocation indicates how the report presented its selected activities. It does not mean that gender equality improved by 50%, nor does it establish that the two initiatives had identical effectiveness or reach.

For 2025, it presents a wider institutional context. Capacity development, grant-writing training, enrollment, civic participation, collaboration, and engagement with educational technology may create opportunities to integrate gender equality into more areas of institutional work. For example, trained extension personnel may be better prepared to consider the needs of diverse community members, while institutional partnerships may provide channels for developing inclusive programs and policies.

Nevertheless, the supplied materials do not consistently describe the gender-specific components of these 2025 initiatives. They also lack comparable participant statistics, verified gender-disaggregated enrollment figures, documented policy changes, and outcome measurements.

The most defensible conclusion is that the documented approach appears to broaden from two explicitly gender-related activities in 2024 to a wider set of institutional activities in 2025 that could support gender-responsive inclusion. The evidence does not establish a quantified increase in gender equality, verified gender parity in enrollment, or measurable improvement in the experiences of women and LGBTQIA+ members of the College community.

Area	2024 evidence	2025 evidence in supplied summary	Comparative interpretation
Gender awareness	Kaya't Kaya symposium on gender and sex education for Tech-Voc trainees, facilitated with the City Health Office.	Capacity development for extensionists is listed as a gender-sensitive programming enabler, but the summary does not specify the training's exact gender content.	2024 has the more explicit gender-education evidence. The 2025 opportunity is to mainstream gender-responsive practices into extension work and record results.
Campus participation and inclusion	HIUSA Sports League / Intramural Games across BTLEd, BTVTEd, BACOMM, and TSTI, with men's and women's divisions and Mr. and Ms. Intramurals.	NSTP orientation/MOA signing and enrollment are listed as activities supporting broader participation and access.	The reporting shifts from a named campus inclusion event to broader access and civic-participation channels; no comparable participation data are supplied.
Institutional capacity and partnerships	City Health Office collaboration supported the 2024 gender-awareness symposium.	Grant-writing training, CTU legal review, and international conference activities are listed.	The 2025 portfolio includes more institutional mechanisms that could sustain inclusive programming, although gender-specific results are not reported.
Equitable access and representation	Equal contribution shares are stated for the two SDG 5 initiatives; no enrollment gender split is provided.	Freshmen enrollment for AY 2025–2026 is cited, but no verified gender-disaggregated enrollment totals are provided.	Access is discussed in both years' context, but gender parity or change in representation cannot be calculated.
LGBTQIA+ inclusion	The 2024 report discusses gender sensitivity and inclusion broadly; it does not quantify LGBTQIA+ participation or identify a targeted program for this group.	The supplied narrative frames initiatives as LGBTQIA+-inclusive, but the listed summaries do not independently confirm LGBTQIA+-specific	This should remain an intended inclusion lens unless explicit policies, program content, and outcome evidence are provided.

Area	2024 evidence	2025 evidence in supplied summary	Comparative interpretation
		activities or outcomes for each event.	

Scope, Sources, and Method

The 2024 baseline is the supplied “Progress Report on SDG 5: Gender Equality,” which details the February 14, 2024 Kaya’t Kaya symposium and the November 14–16, 2024 HIUSA Sports League / Intramural Games. It also assigns each activity a 50.00% share of the report’s 2024 SDG 5 contribution.

The 2025 comparison uses the supplied summary and the URLs listed in that summary. The Campus Journalism Seminar and Workshop is dated November 15, 2024; it is therefore treated as a prior-year activity referenced in the 2025 summary, not as a new 2025 activity. Six other dated examples in the summary fall in 2025: extensionist capacity development, freshman enrollment, NSTP orientation/MOA signing, CTU legal review, grant-writing training, and the international conference on GenAI and education.

Counts in Figure 2 are a manually grouped inventory of these six 2025 examples. They are not official institutional totals, and the themes are broad functional classifications rather than proof that every event was explicitly a gender-equality program. “Not explicit” means that gender-specific details were not provided in the material reviewed; it does not establish that the College conducted no such work.

The supplied narrative includes an estimate of approximately 50% female and 50% male freshmen. No supporting enrollment table or official gender-disaggregated figure was included in the materials, so that estimate is not presented as a verified statistic or charted as fact. Similarly, the materials do not provide a comparable total of unique beneficiaries, pre/post assessments, complaints, referrals, or other outcome indicators.

Comparative Analysis of Documented Initiatives

Gender-Responsive Education and Awareness

In 2024, the “Kaya’t Kaya: Gender and Sex Education in the Workplace” symposium was the clearest direct SDG 5 initiative in the supplied report. Held on February 14 and facilitated by a Health Education and Program Officer from the City Health Office, it targeted Tech-Voc trainees. The report says interactive discussion helped participants connect gender and sex concepts to their experiences. This is particularly relevant for trainees preparing to enter workplaces where non-discrimination, respectful conduct, and safe professional relationships matter.

The supplied 2025 summary identifies Capacity Development Training for Extensionists (February 7, 2025) as a foundation for gender-sensitive extension programs. If the training content included gender analysis, consultation with diverse groups, or inclusive delivery methods, it could extend the 2024 awareness model beyond trainees into community-facing programs. However, the summary does not provide the agenda or learning outcomes, so the exact gender-specific content should be verified before claiming measured progress.

How progress may have occurred: 2024 built awareness through a direct learning activity; 2025’s staff-capacity framing could help bring inclusion principles into the design and delivery

of extension activities. Why it matters: inclusion is more likely to be sustained when it informs not only a one-time seminar but also how programs are planned, delivered, and evaluated. Evidence needed includes training content, participant numbers, assessment results, and examples of gender-responsive practices adopted after the training.

Campus Culture, Participation, and Student Empowerment

The HIUSA Sports League / Intramural Games, launched on November 14, 2024, provided a visible campus platform for teamwork, mutual respect, and participation among students from BTLEd, BTVTEd, BACOMM, and TSTI. The report describes men's and women's divisions in sports such as volleyball and table tennis, as well as the first Mr. and Ms. Intramurals event. The report positions these elements as ways to make equality and inclusion visible in campus life.

The 2025 summary refers to the NSTP General Orientation and MOA signing with the Philippine Air Force, as well as the Campus Journalism Seminar and Workshop dated November 15, 2024. The journalism activity is an earlier event, not a new 2025 result. The 2025 NSTP activity can be understood as a civic-participation opportunity, while journalism can help students develop voice and communication skills; however, the supplied summaries do not provide gender-disaggregated participation or explicitly document that these events targeted women or LGBTQIA+ students.

How progress may have occurred: the 2024 report shows a specific institution-wide activity explicitly aligned with SDG 5, while the activities listed for 2025 point to additional settings—civic service, communication, and student engagement—where inclusion could be integrated. Why it matters: students experience equality through everyday participation and representation, not only through formal lessons. To verify progress, CCCDO should report participation by gender where appropriate, accessible participation rules, documented safeguards, and participant feedback.

Access, Enrollment, and Fair Opportunity

In 2025, the summary identifies the July 1 freshman enrollment for AY 2025–2026 as an access-related milestone. Enrollment is an important gateway to higher education, but the existence of an enrollment process does not in itself demonstrate gender parity or prove that all groups face equal access. The supplied materials include no official enrollment counts by sex or gender identity, no year-on-year comparison, and no data on admission, retention, or completion.

The summary's estimate of around 50% female and 50% male freshmen is therefore treated as unverified and excluded from the results charts. It should not be used in institutional reporting until supported by official figures and a clear definition of the categories collected. Information about gender identity should be handled only through appropriate, voluntary, privacy-protective procedures.

How progress could be verified: compare gender-disaggregated applications, admissions, enrollment, retention, and completion for 2024 and 2025 using consistent definitions. Why it matters: parity in initial enrollment, even when verified, does not necessarily mean equal access to particular programs, leadership roles, scholarships, or completion.

Institutional Capacity, Funding, and Partnerships

The supplied 2025 summary lists grant-writing training for cluster partnership coordinators (October 2–6, 2025; the linked article is dated October 6) and a legal review with Cebu Technological University (July 30–August 1, 2025). These activities are not described in the source summary as gender-specific in their title, but they may create institutional capacity and partnership pathways through which gender-responsive programs can be proposed, resourced, and formalized.

The 2024 report's collaboration with the City Health Office illustrates a more direct connection between a partner and a gender-awareness activity. The 2025 items provide potential enabling structures: staff able to write grant proposals and universities able to develop or review collaborative frameworks. The source materials do not reproduce the agreement text or demonstrate that the reviewed agreement included gender-equality or LGBTQIA+-specific clauses.

How progress may have occurred: a program that began with a one-event partnership in 2024 could be supported in 2025 by more institution-wide skills and collaboration mechanisms. Why it matters: policy commitments need staffing, budgets, operational rules, and accountability. Evidence should include approved gender-responsive plans, budget allocations, partnership clauses, funded projects, and reports on beneficiaries and outcomes.

Innovation, Technology, and Inclusive Participation

The 2025 summary includes the 3rd International Conference on Generative AI and Education (October 6–8, 2025). Engagement with emerging technology can contribute to inclusive learning when digital tools are accessible, training is available across groups, and risks such as bias, harassment, and exclusion are considered.

However, the supplied material does not provide gender-disaggregated attendance or evidence that the conference specifically incorporated women's or LGBTQIA+ perspectives. It is therefore more accurate to describe the conference as an education-innovation platform with potential relevance to gender equality rather than as proof of a measured inclusion outcome.

How progress could be advanced: include gender and inclusion perspectives in sessions, accessibility planning, speaker representation, technology evaluation, and research on bias. Why it matters: technology can widen opportunity, but without intentional design it can also replicate existing inequalities.

Figures and Charts

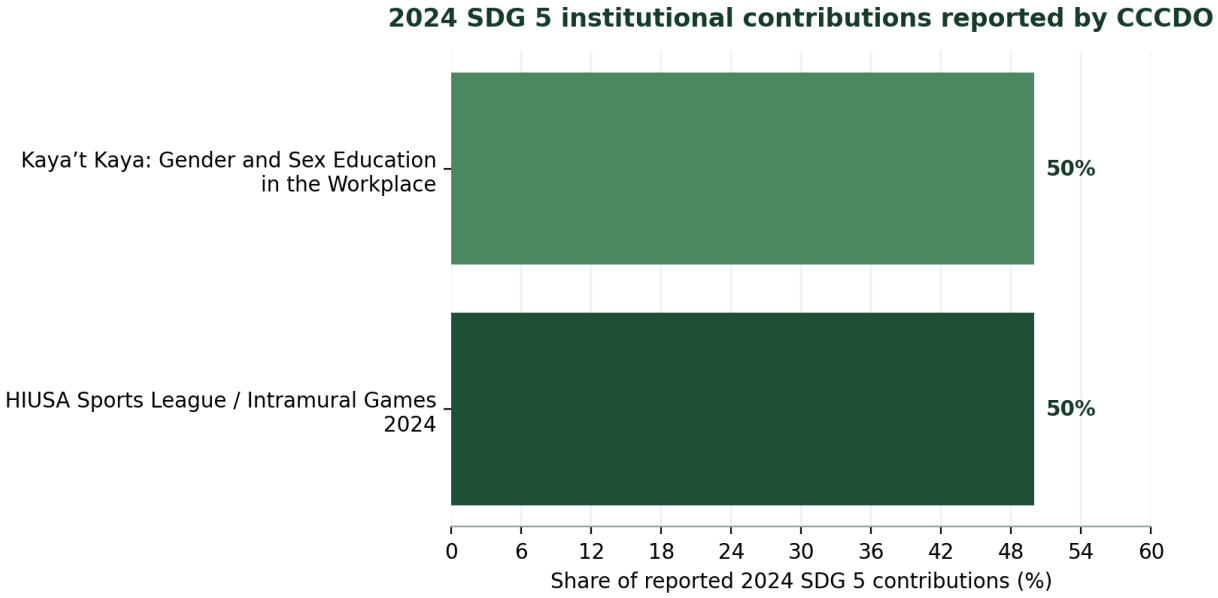

Figure 1. Distribution of the two major 2024 SDG 5 initiatives as stated in the supplied institutional report. The 50% shares describe reported contribution allocation, not measured effectiveness.

Interpretation: The 2024 report split its stated SDG 5 contribution equally between gender and sex education for Tech-Voc trainees and the HIUSA Sports League / Intramural Games. This indicates that the report’s selected efforts covered both education-based awareness and campus-level participation. The percentages should not be interpreted as the share of all institutional gender-equality work or as a 50% improvement in gender equality.

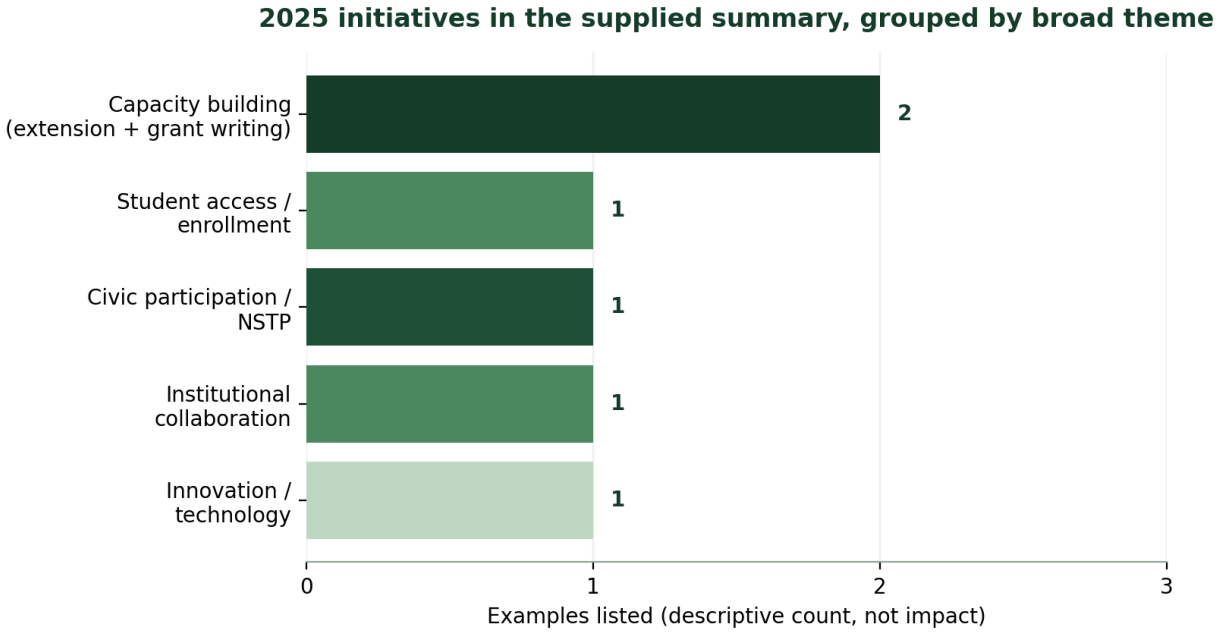

Figure 2. Six dated 2025 examples in the supplied summary, grouped by broad function. The counts are descriptive classifications, not official institutional totals or direct gender-equality outcome measures.

Interpretation: Two examples relate to capacity building (extensionist development and grant-writing training). One each relates to enrollment, civic participation through NSTP, institutional collaboration, and innovation/technology. This grouping shows the breadth of institutional channels identified in the supplied summary. Because the listed activities vary in how directly they address gender equality, their presence should not automatically be treated as evidence of gender-specific results.

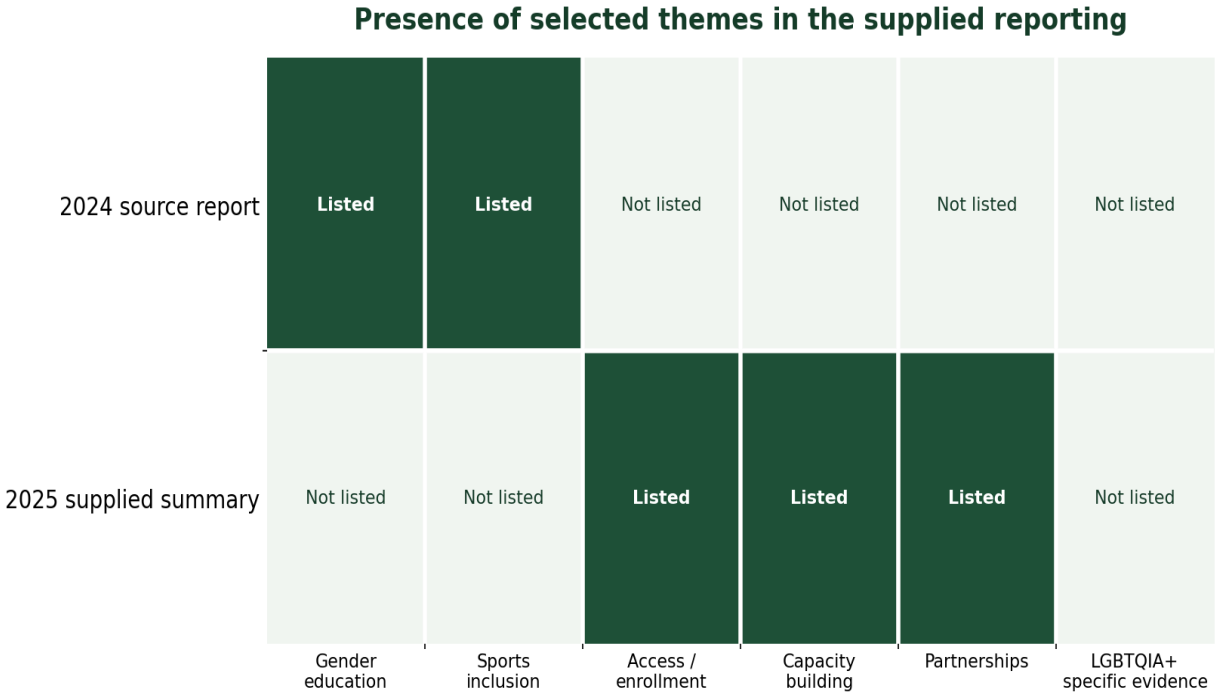

Figure 3. Selected themes explicitly described in the supplied 2024 report and 2025 summary. "Not explicit" means no clear supporting detail was supplied for that theme in the corresponding material.

Interpretation: The 2024 report explicitly describes a gender-and-sex education symposium and a sports event aligned with gender equity. The 2025 summary more clearly itemizes capacity development, enrollment, partnership, and innovation activities, but offers less detail on direct gender-specific implementation. Neither supplied report includes specific, verifiable LGBTQIA+-program outcomes or official gender-disaggregated enrollment percentages. This pattern may reflect a change in reporting emphasis as much as a change in actual practice.

Comparative Indicators and Data Limitations

Indicator	2024 report	2025 supplied summary	What can be concluded
Direct gender-equality activities	Two major activities explicitly identified: Kaya't Kaya and HIUSA Sports League / Intramural Games.	Several broader activities are listed as enabling gender-responsive inclusion; their direct gender-specific components are not consistently described.	2024 contains clearer direct SDG 5 activity descriptions; the 2025 summary broadens the institutional context but needs more detail.

Indicator	2024 report	2025 supplied summary	What can be concluded
Contribution shares	Each of two selected initiatives assigned 50.00%.	No equivalent contribution-share calculation supplied.	No valid percentage increase/decrease can be calculated.
Participation and beneficiaries	Target group identified for Kaya't Kaya; no attendance total given in the SDG 5 report excerpt.	No matched gender-disaggregated participant totals supplied.	Reach and participation change cannot be measured.
Enrollment gender parity	No comparable gender-disaggregated enrollment figure supplied.	Approx. 50/50 estimate appears in the supplied narrative without supporting source data.	Do not report parity as a verified result until official enrollment data are provided.
LGBTQIA+ inclusion	Broad gender sensitivity and inclusion language; no specific outcome measures.	Narrative claims LGBTQIA+ inclusivity, but event-level evidence is not included in the summaries.	Treat this as an inclusion commitment to substantiate, not as a confirmed measurable result.
Policy and institutionalization	Report recommends embedding gender-responsive policies into permanent frameworks.	Grant training and a legal review are listed, but gender-specific clauses, budgets, or approved policy outputs are not provided.	The potential institutional pathway is visible, but implementation and results need documentation.

The comparison is limited by differences in source detail and reporting periods. The 2024 SDG 5 report identifies two major initiatives and gives an equal contribution split. The 2025 narrative selects a broader set of institutional activities without a standardized activity register or comparable metrics. Counts of examples are not counts of beneficiaries, and the number of activities does not measure the quality of gender equality.

Alignment with SDG 5 and Evidence Needed

SDG 5-related area	Documented CCCDO contribution	Evidence needed to assess progress
Gender-responsive education	Kaya't Kaya gender and sex education for Tech-Voc trainees with the City Health Office.	Participant counts, learning checks, post-event feedback, and evidence that training influenced workplace readiness or conduct.
Participation and institutional culture	HIUSA Sports League with men's and women's divisions	Participation by sport/program, access to facilities and resources,

SDG 5-related area	Documented CCCDO contribution	Evidence needed to assess progress
	and student participation across programs.	participant experience, and documented inclusion safeguards.
Gender mainstreaming in extension	2025 capacity development for extensionists, as described in the supplied summary.	Training syllabus, gender analysis tools, examples of revised extension programs, and participation/outcome data for target communities.
Equitable access	Freshman enrollment for AY 2025–2026 is listed in the 2025 summary.	Official gender-disaggregated application, admission, enrollment, retention, and completion data using consistent definitions.
Institutional mechanisms and partnerships	Grant-writing training, CTU legal review, and other collaboration activities listed for 2025.	Approved policies or agreement clauses, gender-responsive budgets, funded programs, implementation reports, and partner accountability.
LGBTQIA+ inclusion and safety	The provided narrative frames inclusion of LGBTQIA+ people as an aim, but specific implementation evidence is limited.	Explicit non-discrimination and anti-harassment policies, safe reporting and support pathways, voluntary and privacy-protective feedback, and documented actions taken.

Conclusion

The supplied reports show that CCCDO's 2024 SDG 5 approach combined direct gender-awareness education with a campus sports event explicitly linked to inclusion and equal participation. The 2025 summary identifies a broader range of institutional activities—extensionist capacity development, enrollment, civic participation, grant-writing capacity, collaboration, and engagement with education technology—that could help embed inclusion across institutional practice.

The strongest explanation of progress is therefore a potential broadening of the channels through which gender-responsive work can be developed, rather than a demonstrated numerical improvement in gender equality. To show that these channels resulted in meaningful progress by 2025, CCCDO needs comparable participation and outcome indicators, clear descriptions of the gender-specific elements of each initiative, verified enrollment data, evidence of policy implementation, and documented safeguards and support for women and LGBTQIA+ members of the college community.

With consistent reporting, the College can make a stronger case not only that activities occurred, but that those activities expanded access, improved safety and participation, reduced barriers, and contributed to fairer outcomes.
